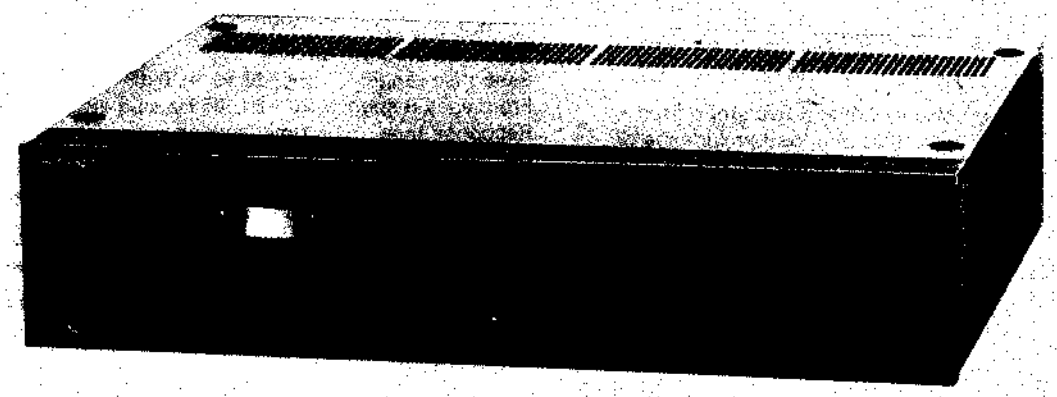
TC-K777ES

AEP Model



'Dolby' and the double-D symbol are the trade marks of Dolby Laboratories Licensing Corporation. Noise reduction system manufactured under license from Dolby Laboratories Licensing Corporation.

STEREO CASSETTE DECK

SPECIFICATIONS

Recording system 4-track 2-channel stereo

Fast-forward and rewind time
Approx. 65 sec. (with C-60 cassette)

Bias frequency 105 kHz

Signal-to-noise ratio (NAB, at peak level)

Cassette / Dolby NR switch	OFF	B-TYPE ON	C-TYPE ON
TYPE IV (Sony METALLIC)	61 dB	68 dB	74 dB
TYPE III (Sony FeCr)	62 dB	69 dB	75 dB
TYPE II (Sony UCX)	59 dB	66 dB	72 dB
TYPE I (Sony BHF)	57 dB	64 dB	70 dB

Total harmonic distortion
0.7 % (with Sony METALLIC and FeCr cassettes)

Frequency response DOLBY NR OFF
- With TYPE IV cassette (Sony METALLIC)
  10 - 20,000 Hz
  15 - 19,000 Hz (±3 dB)
  15 - 14,000 Hz (±3 dB, 0 VU recording)
  15 - 19,000 Hz (DIN)
- With TYPE III cassette (Sony FeCr)
  10 - 20,000 Hz
  15 - 19,000 Hz (±3 dB)
  15 - 19,000 Hz (DIN)
- With TYPE II cassette (Sony UCX)
  10 - 20,000 Hz
  15 - 18,000 Hz (±3 dB)
  15 - 18,000 Hz (DIN)
- With TYPE I cassette (Sony BHF)
  10 - 19,000 Hz
  15 - 17,000 Hz (DIN)

Wow and flutter 0.02% WRMS (NAB)
±0.055% (DIN)

Inputs Line inputs (phono jacks)
Sensitivity 77.5 mV (−20 dB)
Input impedance 50 k ohms

— Continued on page 2 —

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY SHADING AND MARK ⚠ ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

MICROFILM

SONY

SERVICE MANUAL

Outputs	Fixed line outputs (phono jacks) Output level 0.435 V (−5 dB) at a load impedance of 50 k ohms Load impedance over 10 k ohms Variable line outputs (phono jacks) Maximum output level 0.435 V (−5 dB) at a load impedance of 50 k ohms with LINE OUT level control at "0" Variable in five steps from −5 dB to −29 dB Load impedance over 10 k ohms Headphone output Output level variable in five steps from −20 dB to −44 dB at a load impedance of 8 ohms

Tape Transport Mechanism	TCM-120D3

0 dB = 0.775 V

General

Power requirements	220 V ac, 50/60 Hz (240 V ac adjustable by authorized Sony personnel)
Power consumption	50 watts
Dimensions	Approx. 430 × 105 × 390 mm (w/h/d) (16⅞ × 4⅛ × 15⅜ inches) including projecting parts and controls
Weight	Approx. 10.0 kg (22 lbs 1 oz)

LED peak program meters

Response range	−40 dB to + 10 dB
Frequency response	20 - 20,000 Hz ±1.5 dB
Response time	1 millisecond
Decay time (from 0 dB to −20 dB)	750 milliseconds
Overshoot	none
Indicator elements	30 elements for each channel

Note

Appliance conforms with EEC Directive 76/889 regarding interference suppression.

FEATURES

Three-head system

Separate record and playback heads allow optimum gap settings and impedance ratings for distortion-free recording and greatly extended frequency response. For good tape-to-head contact the heads are mounted in one block and each head is separately adjusted for precise azimuth alignment. The three-head system also enables you to monitor the recorded tape while actually recording.

Newly-developed LA (LaserAmorphous) heads

The record and playback heads are made of a special amorphous magnetic alloy developed by Sony, and its cores are solidly welded by laser. This new highly-durable head provides a wider dynamic range and a more extended frequency response, especially in the high-frequency range. The head is designed to take full advantage of the potential of the metal tapes.

Closed-loop dual-capstan tape drive system

Two pairs of capstans and pinch rollers ensure uniform tape tension and stable tape-to-head contact. As a result, wow and flutter and modulation noise are greatly reduced.

Very stable tape speed

The motors for the capstan and reel drives are linear torque BSL (brushless and slotless) motors with an extremely smooth torque. The speed of the capstan motor is regulated by a crystal oscillator. The shaft of the capstan motor drives the tape directly to eliminate any fluctuation in the tape speed which might be caused by belts or idlers.

Bias and record level calibration

Bias current can be precisely adjusted to the optimum level for any tape on the market, assuring the flattest possible frequency response. Furthermore, the sensitivity of the tape can be compensated for, permitting optimum performance of the Dolby NR system.

Vibration-free aluminum alloy chassis

The chassis of the tape transport mechanism is made of 3 mm (⅛ in.) thick aluminum alloy plate, which suppresses resonance of the chassis and greatly reduces the transmission of vibration to the tape.

The chassis of the amplifier section is of copper-plated steel having 5 sides, which prevents eddy-current from circulating and reduces harmonic distortion.

High-quality amplifier section

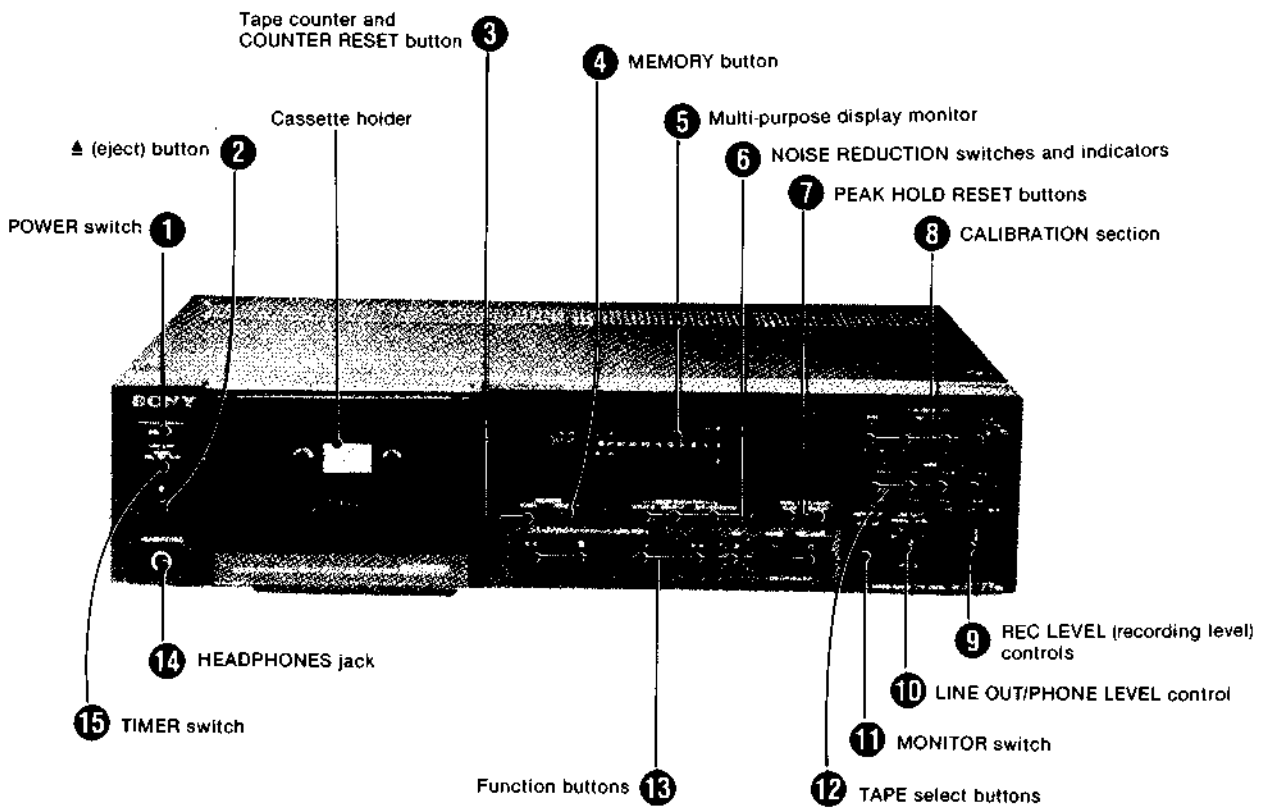
This cassette deck incorporates a dc amplifier design which assures true fidelity down to the dc region.

The recording section and the playback section of the right and left channels are physically separated with the signal paths of the right and left channels parallel, using the symmetric Dolby NR ICs. The channel circuits themselves are well separated by a busbar to eliminate interference.

The electronic components used have been carefully selected to provide the highest possible sound quality, as exemplified by the gold-plated input and output jacks and the use of a newly-developed dual FET.

FUNCTION OF CONTROLS

The numbers in the photo are keyed to the following explanations.



❶ POWER switch
Depress this switch to turn on the power. The lamp in the cassette holder, the display of the peak program meters and the tape counter will light up. The ❚❚ indicator lamp of the PAUSE button will blink for about 4 seconds, indicating that the function buttons are inoperative during this period.
Press this switch again to turn the power off.

❷ ▲ (eject) button
Press this button to open the cassette holder.

❸ Tape counter and COUNTER RESET button
The tape counter shows the tape running time. Press the COUNTER RESET button to reset the tape counter to ".00."

❹ MEMORY button
Press to rewind the tape to the ".00" point on the tape counter. The word "MEMORY" is displayed below the tape counter. Pressing the ► button together with the ◄◄ button automatically starts playback from ".00."
When you do not use the memory function, press this switch again. The word "MEMORY" will disappear.

❺ Multi-purpose display monitor
When the CALIBRATION MODE switch is at the OFF position, the peak program meter scale is displayed. The meter shows the recording level of each channel with the MONITOR switch set at SOURCE and the recorded levels with the MONITOR switch set at TAPE. When the CALIBRATION MODE switch is set to BIAS, the display changes to the scale used for bias calibration and when the switch is set to REC LEVEL, the display changes to the scale for record level calibration.

❻ NOISE REDUCTION switches and indicators
To record or play back using the Dolby* B-type NR system, press the DOLBY B switch. To record or play back using the Dolby C-type NR system, press the DOLBY C switch. The corresponding indicator lights up.
To record or play back without the Dolby NR process, press the OFF (STRAIGHT) switch.

These switches will not operate while the deck is in the record or playback mode.

* "Dolby" and the double-D symbol are trade marks of the Dolby Laboratories Licensing Corporation. Noise reduction system manufactured under license from Dolby Laboratories Licensing Corporation.

❼ PEAK HOLD RESET buttons
You can choose either of two ways to have the peak level indicated:
●When the **AUTO** button is pressed down, successive peaks are held for about 2.5 seconds, except when a higher peak occurs before 2.5 seconds have passed, in which case that peak is immediately indicated.
●When the non-locking **MANUAL** button is pressed, the peak level will be held on the scale until a higher peak occurs, when that peak will be held. To reset the peak held on the meter, just press this button. You will find this method of indicating the peak input useful when you want to know the highest peak of a tape or disc, or when you want to know both the highest peak as well as the intermittent input levels during live recording.

❽ CALIBRATION section
These dials are used for the bias and recording level calibration.

❾ REC LEVEL (recording level) controls
These controls adjust the recording level. The knob nearest the panel is for the left channel and the other knob for the right channel. To adjust the level of the left or right channel only, turn the appropriate knob while holding the other knob.

❿ LINE OUT/PHONE LEVEL control
This control governs the output level of the VARIABLE LINE OUT jacks as well as the headphone level. At the "0" position, the output level of the VARIABLE LINE OUT jacks is rated at 0.435 V and the headphone level is rated 77.5 mV (at a load impedance of 8 ohms). When this control is set to the "3" position, the level is reduced by 3 dB, and by setting it to "6," "12," or "24," the level is reduced by that amount, i.e., by 6 dB, 12 dB, or 24 dB, from the rated output obtained at the "0" position.
These settings do not affect the peak program meters or the output level of the FIXED LINE OUT jacks.

⓫ MONITOR switch
When adjusting the recording level, set this switch to SOURCE to allow monitoring of the sound to be recorded. During playback, set this switch to TAPE to allow monitoring of the recorded sound. During recording, use this switch to monitor either the source or the recorded sound.

⓬ TAPE select buttons
Depress the TAPE button corresponding to the type of tape being used. The type of tape will be displayed on the display monitor.

⓭ Function buttons
It is possible to switch directly from one mode to another.

◄◄ **(rewind) button:** Press this button to rewind the tape. This button is also used, with the ► button, to initiate auto play.

► **(forward) button:** Press this button to play the tape back. To record, press this button while holding the ● button down.
►► **(fast-forward) button:** Press this button to advance the tape rapidly.
● **(record) button:** Press this button together with the ► button to start recording. Also press this button before adjusting the recording level.
■ **(stop) button:** To stop the tape, press this button. The tape will stop automatically when it is completely wound in either direction.
II **PAUSE button:** To pause for a moment during recording or playback, press this button. This button is also used to control more precisely the start of recording and to release the record muting mode.
O **REC MUTE (record muting) button:** Press this button to eliminate unwanted material and to insert a blank space during recording.

⓮ HEADPHONES jack
Headphones may be inserted either to monitor the input signals to be recorded or to listen to a recording in the playback mode. Headphone volume is adjustable with the LINE OUT/PHONE LEVEL control.

⓯ TIMER switch
You can set the unit to record or play back at a predetermined time by connecting any commercially available timer. To record, set this switch to REC. To play back, set it to PLAY.

MPX FILTER switch
Normally set this switch to OFF.
When recording FM stereo broadcasts with the Dolby NR system, set it to ON if the 19 kHz pilot signal and the 38 kHz subcarrier have not been adequately suppressed by the FM tuner or receiver. The word "FILTER" will be displayed on the monitor.
If the tuner or the receiver suppresses such signals adequately (most high-quality tuners and receivers will), you do not have to set this switch to ON.

SECTION 1
OUTLINE

1-1. CIRCUIT DESCRIPTION

Linear Counter

This set uses a new type electrical tape counter, instead of the conventional belt-driven mechanical tape counter, by adopting a microcomputer. This tape counter displays the tape-travelling time linearly in actual time in continuous record and playback modes. The tape-travelling time is calculated by the microcomputer IC3 by determining the rotational speeds of the reel spindles. This is done by detecting various factors such as the diameters of the remaining and wound tapes in the supply and take-up reel spindles, diameter of fully-wound tape, diameter of the reel hub, and the tape-travelling speed. This linear tape counter is intended for cassette tapes C-60, C-90 and C-120. The tape counter can not be used with cassette tapes C-46 and C-30. However, the display of the counter also runs linearly when using cassette tapes C-30 and C-46.

In the supply and take-up reel spindles, there is a magnet magnetized at the plural poles, which detects the rotation at the hall elements (HE1005, 1006), then obtains signals as to the rotation speed of supply and take-up reel spindles. These signals are applied to IC803, IC802 and amplified. The pulse output generated here is applied to terminals (23) and (24) of IC3 (microcomputer). IC3 processes and corrects the operation to make the pulse counting for one count per second, and processes carry and decarry operations. Terminals (6) to (13) output signals for each segment. Terminals (16) to (19) output grid-drive signals for the fluorescent display tube. Due to these output signals, the display tube displays four-digit digital minutes/seconds figures in a linear (time-wise) manner.

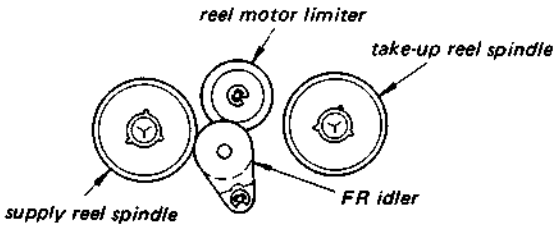
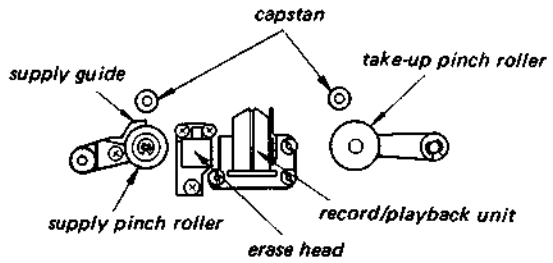
SECTION 3
ADJUSTMENTS

3-1. MECHANICAL ADJUSTMENTS

Precaution

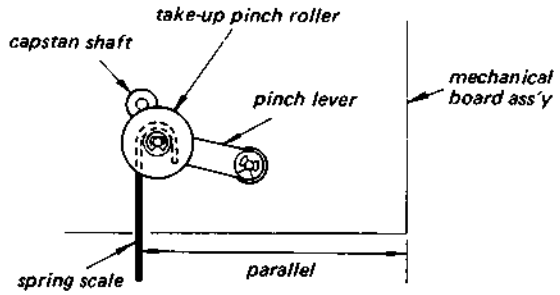
1. Clean the following parts with a denatured alcohol-moistened swab.





2. Demagnetize the record/playback head with a head demagnetizer.
3. Do not use a magnetized screwdriver for the adjustments.

Pinch Roller Pressure Adjustment

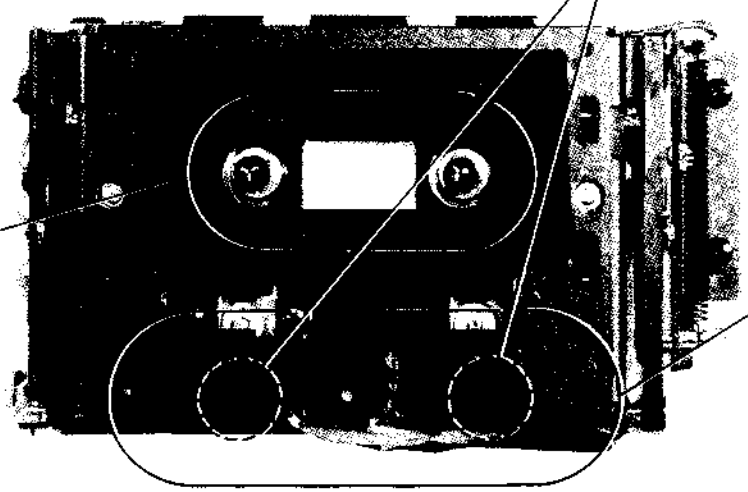


1. Make sure that the capstan shaft and pinch roller are parallel.
2. In forward mode, pull the spring scale slowly so that it is parallel to the surface of the mechanical board ass'y and read the spring scale when the pinch roller starts rotating.

Specification

	pinch roller pressure
take-up side	220 – 380 g
supply side	180 – 280 g

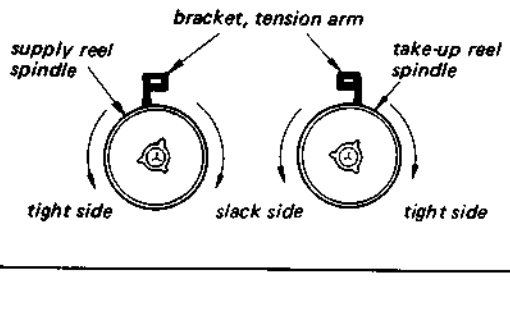
3. If necessary, change the position of pinch roller plunger. (Refer to Pinch roller/Head Plunger Position Adjustment on page 18.)



Brake Torque Adjustment

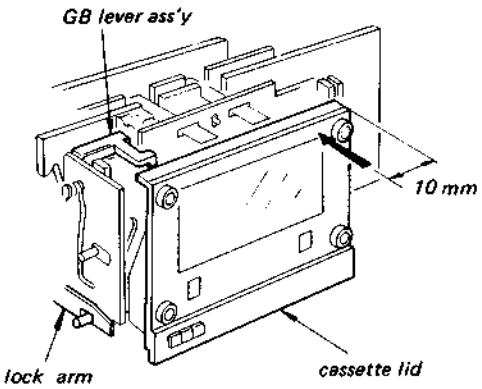
Specification

Tight side: 100 – 200 g·cm(1.4 – 2.8 oz·inch)
Slack side: less than 90 g·cm(1.3 oz·inch)



Cassette Holder Operation

1. Insert a cassette tape (C-90 with erasure prevention tab) into the cassette holder and push the portion shown by the arrow. Make sure that the cassette holder is locked, the GB lever ass'y is lowered and the lock arm returns completely.
2. Make sure that the cassette holder opens smoothly in 0.6 —1.5 seconds.



Head Height Adjustment

Insert a mirror cassette or adjustment cassette and adjust screws Ⓐ – Ⓒ so that hte tape enters the tape guide of the record/playback head smoothly when pushing the head base out by hand.

1. Make an adjustment cassette as shown below or use a mirror cassette.

2. Install the mirror cassette (or adjustment cassette) in the set. In playback mode, the tape should not curl at the portions shown by arrows (tape guides) in Fig. a.
   If the tape curls, adjust the height of tape guide of supply pinch roller.

Adjustment locations:

adjustment screw of tape curl in Fig. b
(Be careful not to turn the screw more than 1/2 turn.)

3. Back tension: 0
   Make sure that there is no tape twist at portions ⓐ — ⓓ.
   1. When the tape twists upwards:
      Turn adjustment screws Ⓑ, Ⓒ of the record/playback head and recline the head as shown in Fig. C.
   2. When the tape twists downwards:
      Turn adjustment screws Ⓑ, Ⓒ and recline the head as shown in Fig. D.
4. Measure the height of erase head.
   If it is out of the range indicated in Fig. e, follow the procedures below.
   1. When the height of erase head is out of the range:
      Adjust the height by screws Ⓓ, Ⓔ, Ⓕ of the erase head.
   2. After adjusting the height of the erase head, make sure that the head is not inclined. If necessary, loosen or tighten adjustment screw Ⓓ.

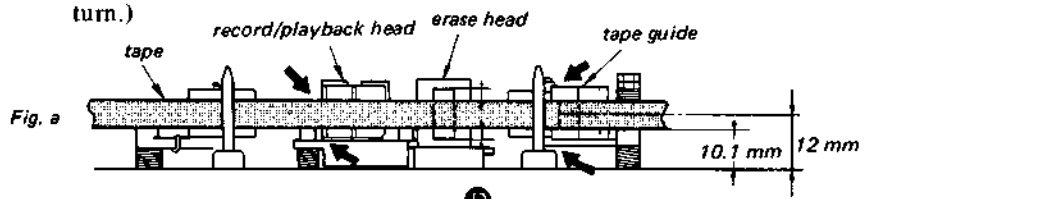


Fig. a

Note: The values shown are for reference purposes.

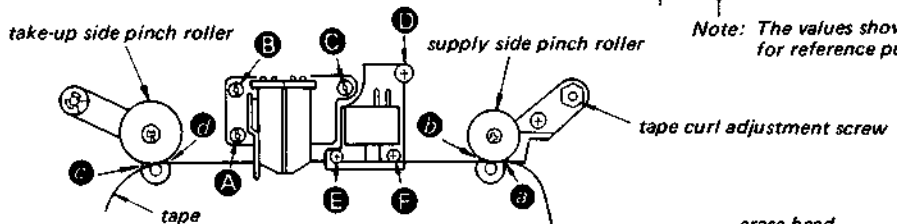

Fig. b

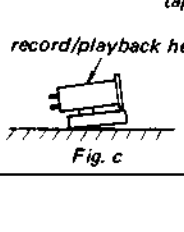

Fig. c

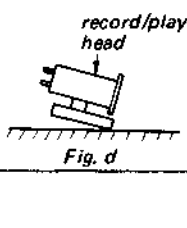

Fig. d

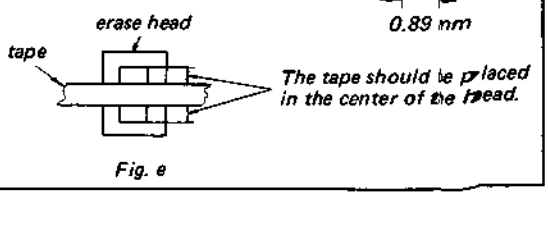

Fig. e

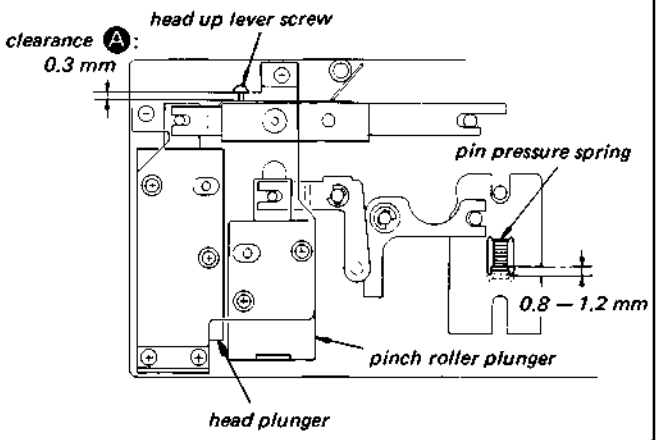
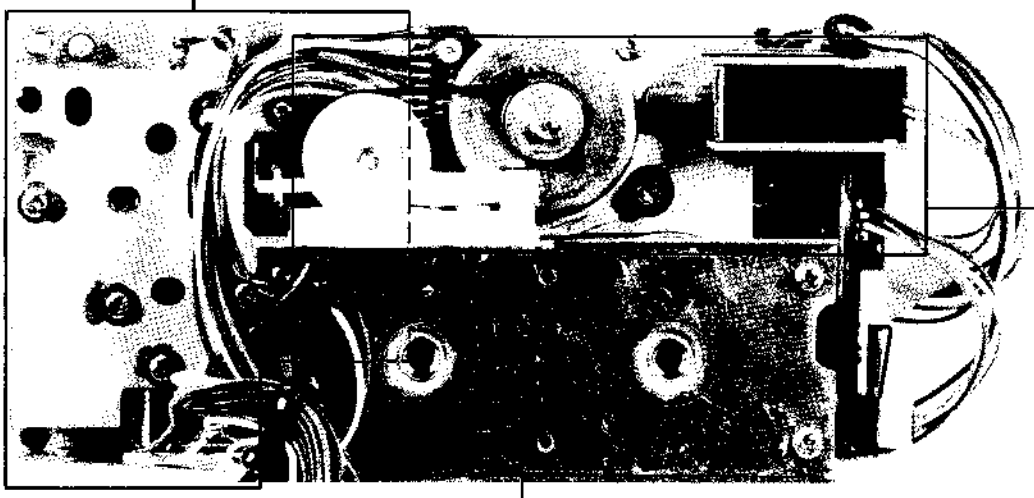
Pinch Roller/Head Plunger Position Adjustment

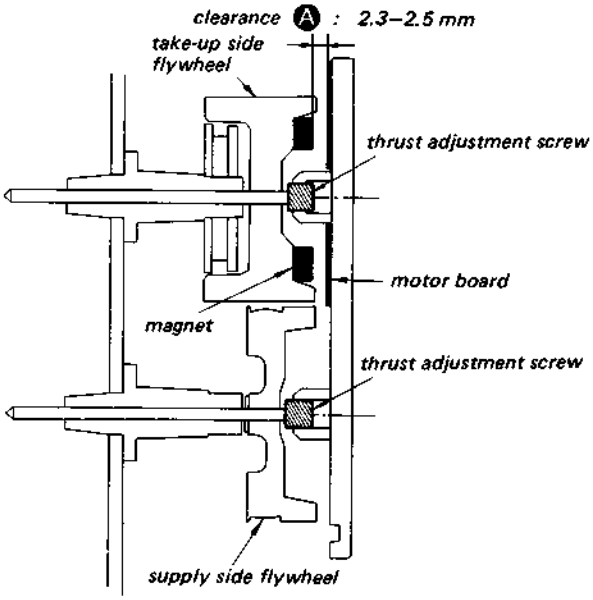
1. Position the head plunger so that clearance Ⓐ is 0.3 mm.
2. Move the head plunger and the pinch roller plunger and adjust the position of the pinch roller plunger so that the pin pressure spring can move in the range of 0.8 mm — 1.2 mm.
3. Lock the plunger screw with suitable locking compound.





Take-up Side/Supply Side Flywheel Thrust Adjustment

1. Take-up Side Flywheel
   Insert a spacer of 2.4 mm between the flywheel magnet and motor board and adjust the position of the magnet so that clearance Ⓐ is between 2.3 mm and 2.5 mm.
2. Supply Side Flywheel
   Tighten the thrust adjustment screw lightly till the flywheel does not move and then loosen it by 1/2 – 3/4 turns.
3. After the adjustment, lock the adjustment screw with suitable locking compound.



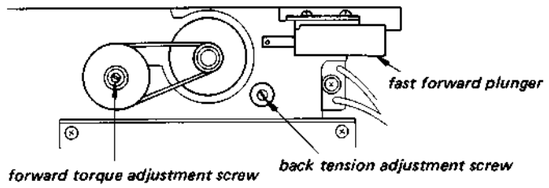
Forward Torque/Back Tension Torque Adjustment

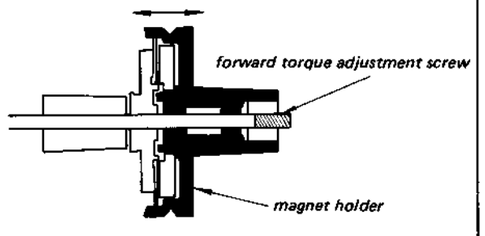
1. Loosen adjustment screws of the forward torque and back tension torque till the magnet holder does not move and then turn them by 1/2 turn clockwise.
2. Connect the cassette torque meter (CQ-102B) and measure forward torque and back tension. If they do not meet the specifications, adjust the back tension adjustment screw.

Specifications:

forward torque	35 – 45 g·cm
back tension torque	5.5 – 7.5 g·cm

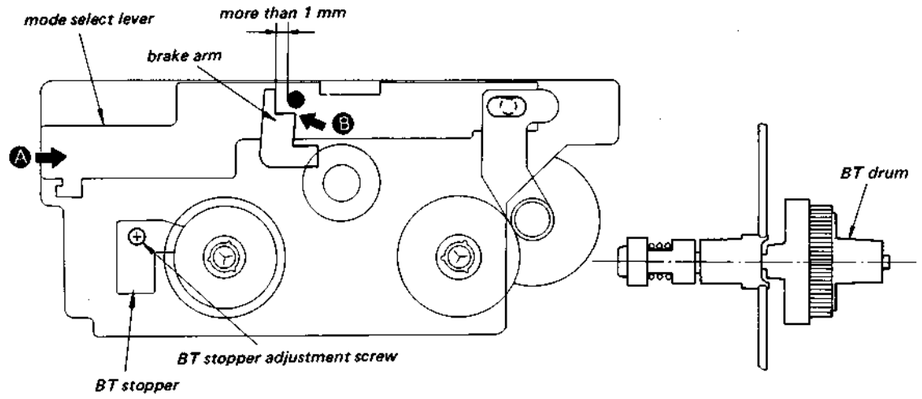
3. Lock the adjustment screw with suitable locking compound.





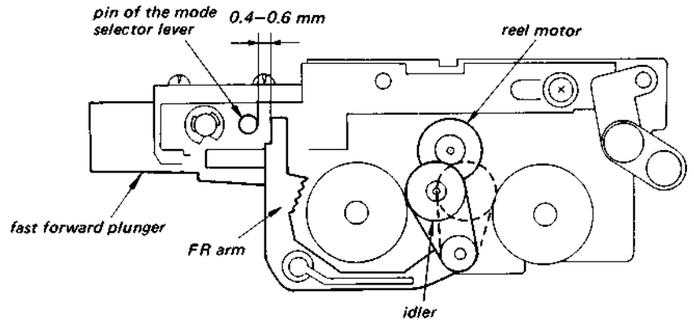
Check of BT Stopper Position

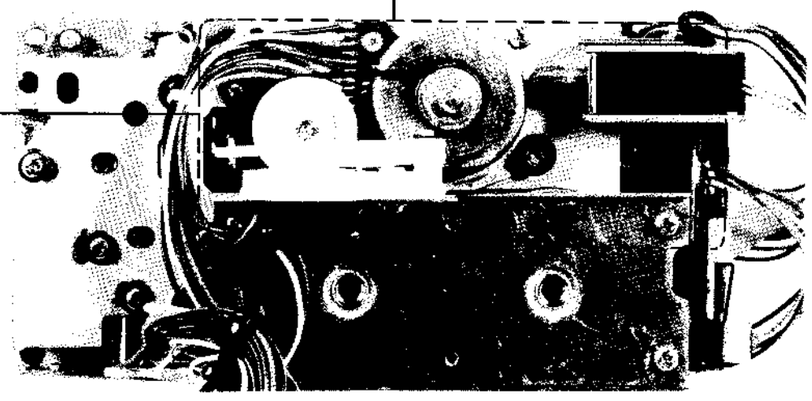
1. Loosen the BT stopper adjustment screw, push the mode select lever in the direction of arrow Ⓐ and fix the BT stopper to the reel spindle with the adjustment screw.
2. Move the brake arm in the direction of arrow Ⓑ, remove the brake from the reel spindle and confirm that the BT drum does not rotate together with the reel spindle.
3. Make sure that the clearance between the mode select lever and the brake arm is more than 1 mm when the mode select lever returns to its original position.



Fast Forward Plunger Position Adjustment

1. Push the fast forward plunger.
2. Turn the reel motor clockwise (fast forward mode). When the idler and the reel spindle come into contact, adjust the position of the fast forward plunger by loosening the screw so that the clearance between the FR arm and the mode selector lever pin is between 0.4 mm and 0.6 mm.
3. Next, turn the reel motor counterclockwise (rewind mode) and adjust to obtain the same result as in step 2.
4. Lock the screw with suitable locking compound.





3-2. ELECTRICAL ADJUSTMENTS

Note: The adjustment should be performed in the order given in this service manual. The adjustments should be performed for both L-CH and R-CH.

- Set the TAPE switch according to the test tape as follows.

Tape	TAPE Switch
CS-15	TYPE I
CS-25	TYPE II
CS-30	TYPE III
CS-40	TYPE IV

- Switches and controls should be set as follows unless otherwise specified.

CALIBRATION MODE ..... OFF
REC LEVEL (L/R) ..... MED
CALIBRATION BIAS
REC LEVEL ..... MED
DOLBY NR ..... OFF
TAPE ..... TYPE I
LINE OUT ..... 0 dB
MONITOR ..... SOURCE
TIMER ..... OFF

- Standard Record:

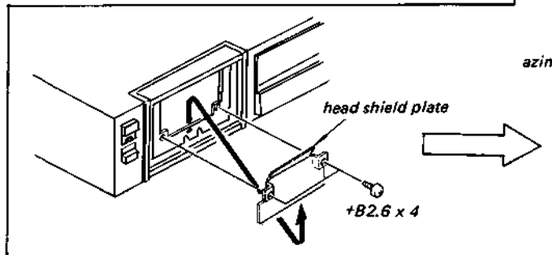
Deliver the standard input signal level to the input jack and set the REC LEVEL control to obtain the standard output signal level.

Standard Input Level

Input Terminal	LINE IN
source impedance	10 kΩ
input level	0.25 V (–10 dB)

Standard Output Level

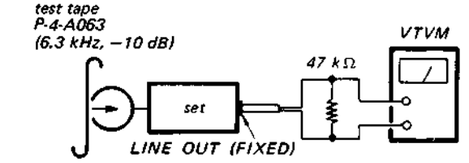
Output Terminal	LINE OUT	HEADPHONES
load impedance	47 kΩ	8 Ω
output level	0.44 V (–5 dB)	39 mV (–26 dB)



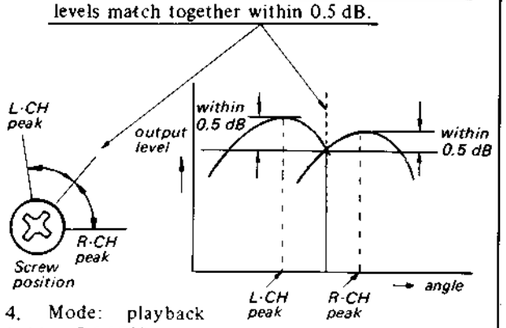
1. Record/playback Head Azimuth Adjustment

Procedure:

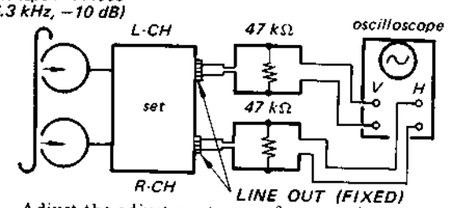
1. Loosen the adjustment screw.
2. Mode: playback



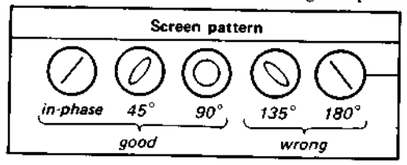
3. Turn the adjustment screw for the maximum output levels. If these levels do not match, turn the adjustment screw until both of output levels match together within 0.5 dB.

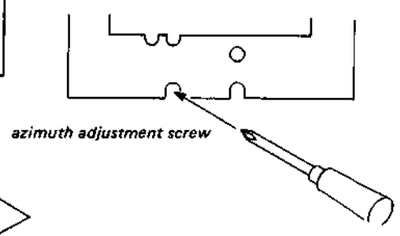


4. Mode: playback



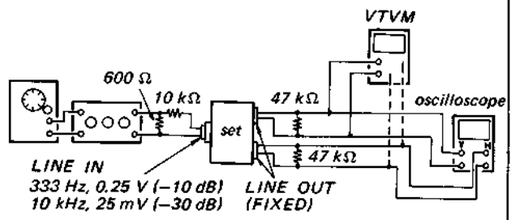
Adjust the adjustment screw for a good pattern.





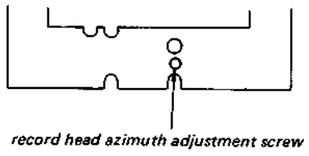
2. Record Head Azimuth Adjustment

Record head azimuth adjustment should be made later than playback head azimuth adjustment.



Adjust	VTVM Reading	On the Oscilloscope				
record head azimuth adjustment screw	maximum	in-phase	45°	90°	135°	180°
		good			wrong	

Note: If the maximum peaks for L-CH and R-CH do not coincide, set the screw to the mechanical mid of the two positions for the peaks. At this time, the level should change no more than 1 dB from the maximum peaks.

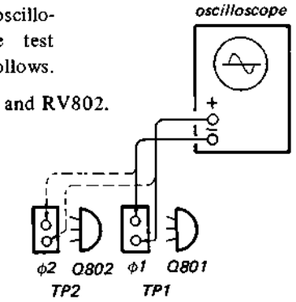


record head azimuth adjustment screw

3. Speed Detecting Head Adjustment

Procedure:

1. Install blank cassette tape CS-15 and set the unit in fast-forward or rewind mode.
2. Connect an oscilloscope to the test points as follows.
3. Adjust RV801 and RV802.

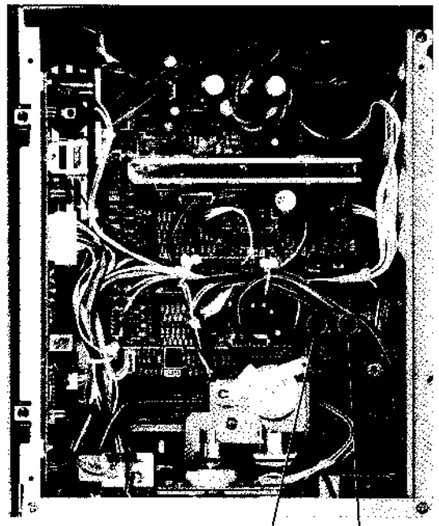


Specification:

Oscilloscope Connection	Adjust	Waveform
TP1 (φ1)	RV801	A B — A = B (both within ±10 %)
TP2 (φ2)	RV802	

Adjustment Location:

– system control board –



4. Capstan Motor Adjustment

Setting:

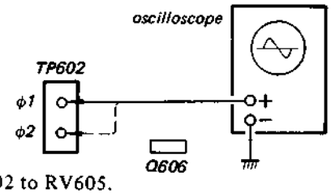
POWER switch: ON

Mode: stop

Procedure:

1. Set S601 to DC side (full-counterclockwise position).
2. Connect an oscilloscope to the test points as follows.

Connection



3. Adjust RV602 to RV605.

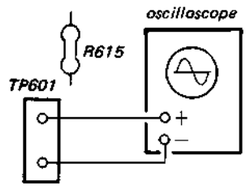
GAIN

Oscilloscope Connection	Adjust	Waveform
TP602 (φ1)	RV602	A = 3.6 – 4.4 V p-p
TP602 (φ2)	RV604	

OFFSET

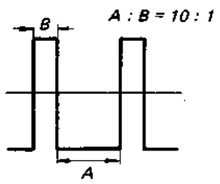
Oscilloscope Connection	Adjust	Waveform
TP601 (φ 1)	RV603	0 V
TP601 (φ 2)	RV605	

4. Set S601 to SERVO side (full-clockwise position).
5. Connect an oscilloscope to the test points as follows.



6. Adjust RV601 to obtain square waveforms as shown below.

Specification:

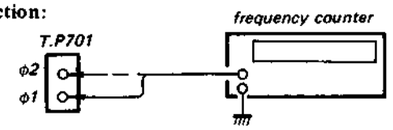


5. Reel Motor Adjustment

Procedure:

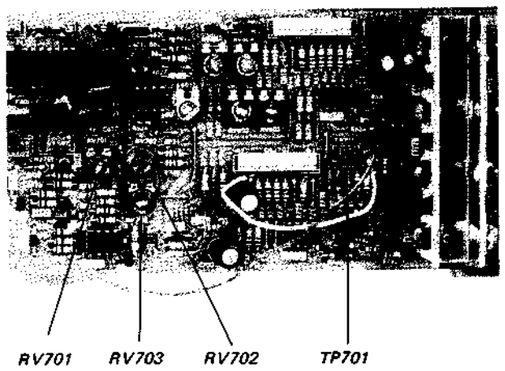
1. Set the unit in playback mode with a tape cassette installed.
2. Adjust RV702 so that the output frequency of TP701 is between 48 and 52 Hz.
3. Remove the cassette and adjust RV703 so that output frequency of TP701 in rewind mode is the same as that in fast forward mode.
4. Adjust RV701 so that output frequency of TP701 is 168–172 Hz.

Connection:



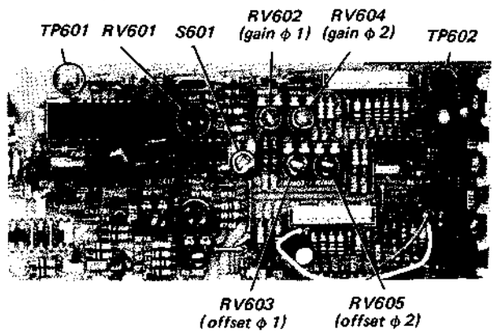
Adjustment Location:

– servo amp board –



Adjustment Location:

– servo amp board –

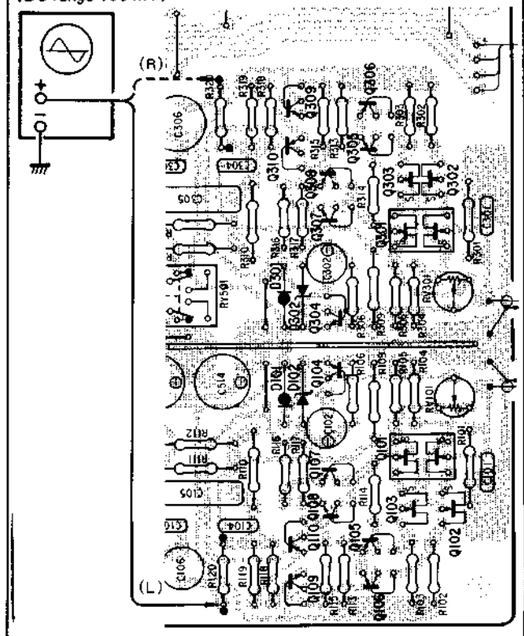


6. Playback Offset Adjustment

Procedure:

Adjust RV101 (L-CH), RV301 (R-CH) so that output level at test points, R120 (L-CH), R320 (R-CH) is 0 V ± 100 mV.

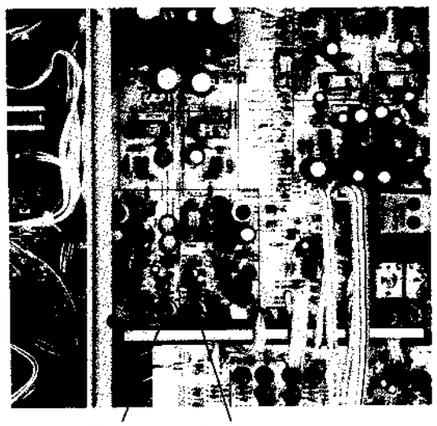
Connection:



Specification:

0 V ± 100 mV

Adjustment Location:

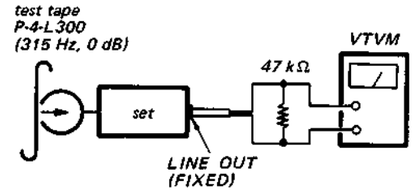


7. Playback Level Adjustment

Setting:

TAPE SELECT switch: TYPE 1

Mode: playback



Adjust RV102 (L-CH) and RV302 (R-CH) to obtain the specified LINE OUT level.

Specification:

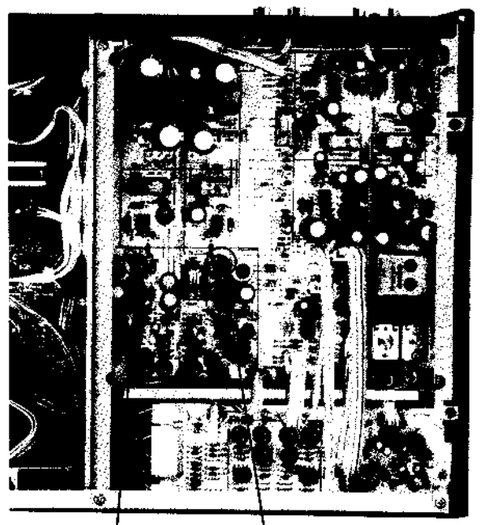
LINE OUT level : 0.41 to 0.46 V
(–4.5 to –5.5 dB)

Level difference between channels: less than 0.5 dB.

Check that the LINE OUT level does not change in playback mode while changing the mode from playback to stop several times.

Adjustment Location:

– record/playback board –



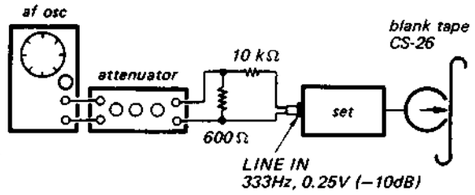
8. Record Level Adjustment

Setting:

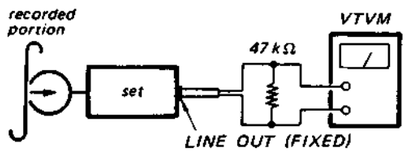
REC LEVEL control: standard record
(See page 21.)

Procedure:

1. Mode: record



2. Mode: playback

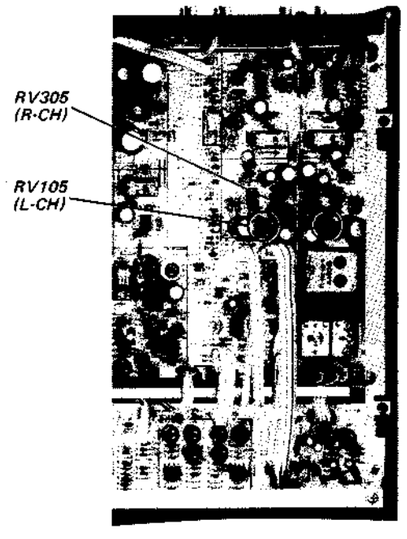


Adjust RV105 (L-CH) and RV305 (R-CH) to obtain 0.44V (–5dB) LINE OUT level.

Specification:

LINE OUT level: 0.36 – 0.51 V
(–6.5 to 3.5 dB)

Adjustment Location: *– record/playback board –*



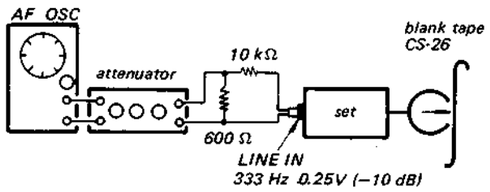
9. Record Bias Adjustment

Setting:

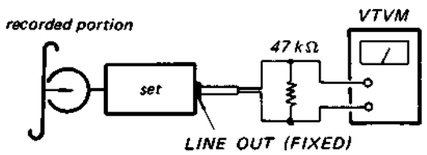
REC LEVEL control: standard record
(See page 21.)

Procedure:

1. Mode: record



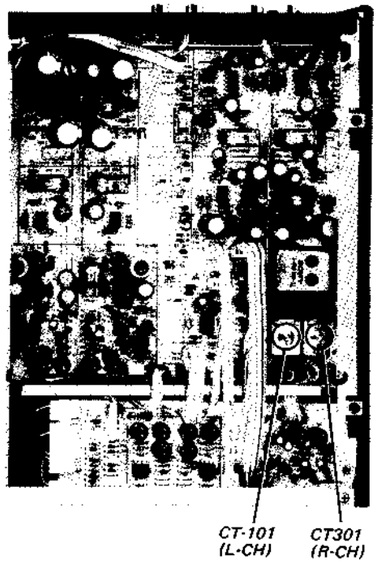
2. Mode: playback



Adjust CT101 (L), CT301 (R) to obtain the same playback level at 333 Hz and 10 kHz.

3. Repeat steps 1 and 2. Be sure to finish adjusting CT101, CT301 by turning them clockwise.

Adjustment Location:
– record/playback board –



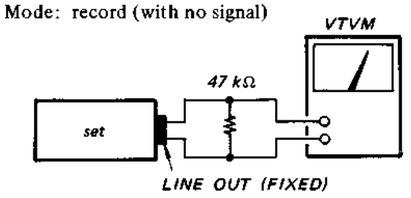
10. Record-Bias Trap and Bias Osc Frequency Adjustments

Setting:

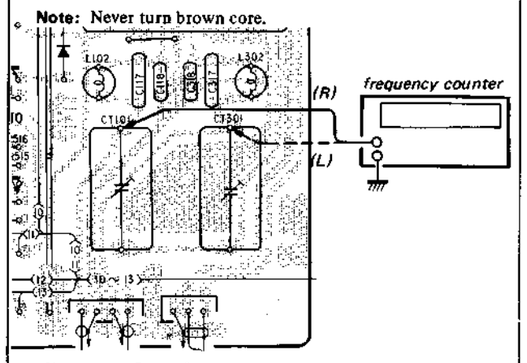
TAPE switch: TYPE IV
MONITOR switch: TAPE

Procedure:

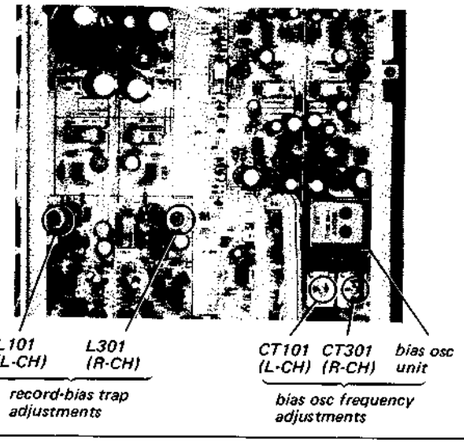
1. Mode: record (with no signal)



2. Adjust L101 (L-CH) and L301 (R-CH) so that LINE OUT level is less than 3.4 mV (–47 dB).
3. Next, connect the frequency counter with a trimmer capacitor (CT101 or CT301) and adjust bias osc frequency by turning red core of bias osc unit so that the reading is 103–107 kHz.



Adjustment Location:
– record/playback board –



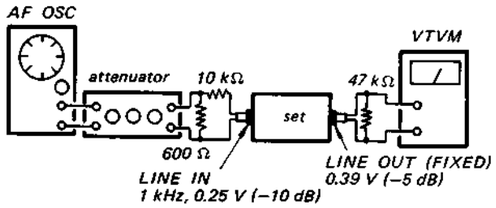
11. Meter Calibration

Setting:

PEAK HOLD reset switch: MANUAL
REC LEVEL control: Standard record
(See page 21.)

Procedure:

1. Mode: record



2. Set RV108, 308 to MIN and adjust RV109, 309 so that Low segment lights up dimly as shown in Fig. 1.
3. Low segment should go out when the input level is set to –10.3 dB.
4. Adjust RV108, 308 so that LOW segment lights up dimly when the input level is –10.3 dB.
5. LOW segment should light up completely when the input level is set to –10 dB.
6. Adjust the input level so that LINE OUT level is +9 dB.
7. Lower the input to 0.3 dB so that LINE OUT output is +8.7 dB. While pushing PEAK HOLD MANUAL switch, adjust RV110, 310 so that the segment lights up dimly as in Fig. 2.
8. Adjust the input level so that LINE OUT output is +9 dB. At this time, the segment in Fig. 2 should light up completely.

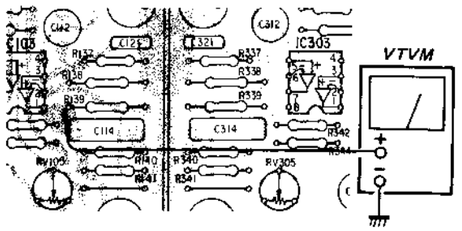
12. REC LEVEL CAL Adjustment

Setting:

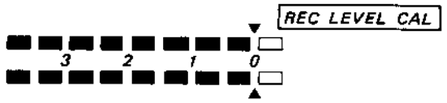
CALIBRATION MODE switch: REC LEVEL

Procedure:

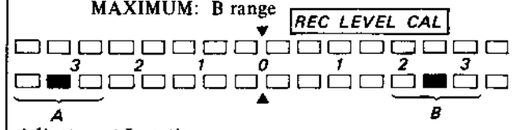
1. Adjust RV106 so that the level at the check point (R142), is 77 mV (−20 dB).



2. Install blank tape (CS-26) and set the unit to RECORD MONITORING mode by changing the MONITOR switch to TAPE position.
   Adjust RV107 (L-CH), 307 (R-CH) so that the segment over 0 dB indication goes out.

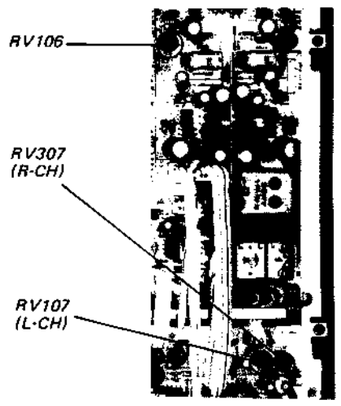


3. Be sure that indication of meter varies as follows when turning REC LEVEL CAL control from mechanical center to MIN or MAX.
   The right segment should be lit up in the following range.
   MINIMUM : A range
   MAXIMUM: B range



Adjustment Location:

– record/playback board, REC CAL board –



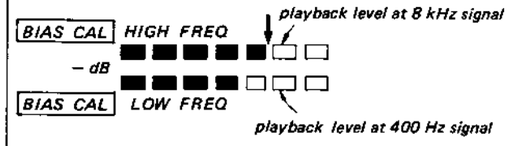
13. Bias Cal Adjustment

Setting:

CALIBRATION MODE switch: BIAS

Procedure:

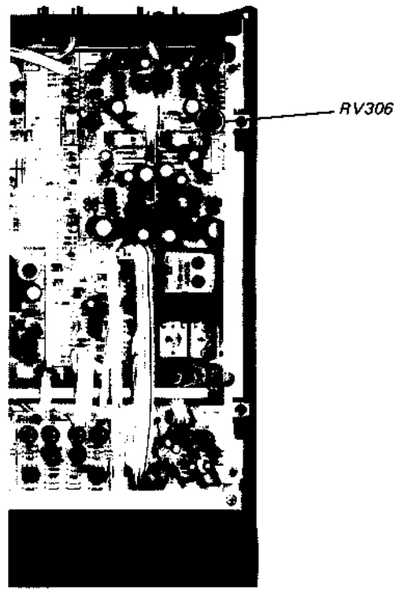
1. MONITOR switch: TAPE
2. Install the blank tape (CS-26) and adjust RV306 so that the HIGH FREQ element one above the maximum LOW FREQ element lights up completely. (The next one up may blink).



3. Make sure that elements of HIGH FREQUENCY (upper side) vary when turning BIAS CAL control from the mechanical center to MIN and to MAX.
   Relative to level at BIAS CAL control center.
   MIN : +9 element
   MAX: −9 element

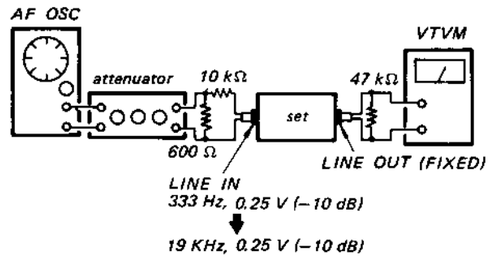
Adjustment Location:

– record/playback board –



14. MPX Filter Adjustment

1. Mode: record
   MPX filter switch: ON
2. Feed a signal of 333 Hz, 0.25 V (−10 dB) into the LINE IN jack.
3. Adjust the REC LEVEL control for −5 dB (0.44 V) on the VTVM.
4. Feed a signal of 19 kHz, 0.25 V (−10 dB) into the LINE IN jack.
5. Adjust L105 (L-CH) and L305 (R-CH) for minimum reading on VTVM.



Specification:

Less than 14 mV (−35 dB)

Adjustment Locations:

– record/playback board –

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked " ♦ " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:

- All capacitors are in μF. Common capacitors are omitted. Refer to the following lists for their part numbers. MF:μF, PF:μμF.

RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.
- F : nonflammable

COILS

- MMH : mH, UH : μH

The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

SEMICONDUCTORS

In each case, U : μ, for example:
UA···: μA···, UPA···: μPA···, UPC···: μPC, UPD···: μPD···

NOTE:
- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked " ♦ " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:
- All capacitors are in μF. Common capacitors are omitted. Refer to the following lists for their part numbers. MF:μF, PF:μμF.

RESISTORS
- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.
- F : nonflammable

COILS
- MMH : mH, UH : μH

The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

SEMICONDUCTORS
In each case, U : μ, for example:
UA···: μA···, UPA···: μPA···, UPC···: μPC, UPD···: μPD···

NOTE:
- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked " ♦ " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:
- All capacitors are in μF. Common capacitors are omitted. Refer to the following lists for their part numbers. MF:μF, PF:μμF.

RESISTORS
- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.
- F : nonflammable

COILS
- MMH : mH, UH : μH

The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

SEMICONDUCTORS
In each case, U : μ, for example:
UA···: μA···, UPA···: μPA···, UPC···: μPC, UPD···: μPD···

NOTE:
- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked " ♦ " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:
- All capacitors are in μF. Common capacitors are omitted. Refer to the following lists for their part numbers. MF:μF, PF:μμF.

RESISTORS
- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.
- F : nonflammable

COILS
- MMH : mH, UH : μH

The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

SEMICONDUCTORS
In each case, U : μ, for example:
UA···: μA···, UPA···: μPA···, UPC···: μPC, UPD···: μPD···

NOTE:
- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked " ♦ " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:
- All capacitors are in μF. Common capacitors are omitted. Refer to the following lists for their part numbers. MF:μF, PF:μμF.

RESISTORS
- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.
- F : nonflammable

COILS
- MMH : mH, UH : μH

The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

SEMICONDUCTORS
In each case, U : μ, for example:
UA···: μA···, UPA···: μPA···, UPC···: μPC, UPD···: μPD···

NOTE:
- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked " ♦ " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:
- All capacitors are in μF. Common capacitors are omitted. Refer to the following lists for their part numbers. MF:μF, PF:μμF.

RESISTORS
- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.
- F : nonflammable

COILS
- MMH : mH, UH : μH

The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

SEMICONDUCTORS
In each case, U : μ, for example:
UA···: μA···, UPA···: μPA···, UPC···: μPC, UPD···: μPD···

ELECTRICAL PARTS

Ref.No.	Part No.	Description
S01	1-552-539-00	SWITCH, KEY BOARD
S02	1-552-539-00	SWITCH, KEY BOARD
S03	1-552-539-00	SWITCH, KEY BOARD
S04	1-552-539-00	SWITCH, KEY BOARD
S05	1-552-539-00	SWITCH, KEY BOARD
S06	1-552-539-00	SWITCH, KEY BOARD
S07	1-552-539-00	SWITCH, KEY BOARD
S501	1-553-254-00	SWITCH, ROTARY
S502	1-554-338-00	SWITCH, LEVER SLIDE
S503	1-554-007-12	SWITCH, PUSH
S504	1-552-964-00	SWITCH, ROTARY
S505	1-553-638-00	SWITCH, SLIDE
S601	1-553-325-00	SWITCH
S801	1-553-206-00	SWITCH, SLIDE
S851	1-552-539-00	SWITCH, KEY BOARD
S852	1-552-539-00	SWITCH, KEY BOARD
S853	1-552-539-00	SWITCH, KEY BOARD
S854	1-552-539-00	SWITCH, KEY BOARD
S855	1-552-539-00	SWITCH, KEY BOARD
S856	1-552-539-00	SWITCH, KEY BOARD
S857	1-552-539-00	SWITCH, KEY BOARD
S951⚠	1-553-318-00	SWITCH, PUSH (AC POWER)
S1001	1-552-268-00	SWITCH, SLIDE
S1002	1-552-268-00	SWITCH, SLIDE
TH101	1-800-200-00	THERMISTOR S-3K
TH301	1-800-200-00	THERMISTOR S-3K
TH1001	8-719-814-11	DIODE THS102
TH1002	8-719-814-11	DIODE THS102
TH1003	8-719-814-11	DIODE THS102
TH1004	8-719-814-11	DIODE THS102
TH1005	8-719-814-11	DIODE THS102
TH1006	8-719-814-11	DIODE THS102
TP1 ♣	1-560-060-31	PIN, CONNECTOR 2P
TP2 ♣	1-560-060-31	PIN, CONNECTOR 2P
TP3 ♣	1-560-060-31	PIN, CONNECTOR 2P
TP601♣	1-560-060-31	PIN, CONNECTOR 2P
TP602♣	1-560-060-31	PIN, CONNECTOR 2P
TP701♣	1-560-060-31	PIN, CONNECTOR 2P
X601	1-527-815-00	OSCILLATOR, CRYSTAL

NOTE:
- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked " ♣ " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:
- All capacitors are in μF. Common capacitors are omitted. Refer to the following lists for their part numbers. MF:μF, PF:μμF.

RESISTORS
- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.
- F : nonflammable

COILS
- MMH : mH, UH : μH

The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

SEMICONDUCTORS
In each case, U : μ, for example:
UA···: μA···, UPA···: μPA···, UPC···: μPC, UPD···: μPD···
