Tape Transport Mechanism Type	TCM-110C3

MICROFILM

SERVICE MANUAL

TC-K555ES

Inputs	Line inputs (phono jacks) Sensitivity 77.5 mV (−20 dB) Input impedance 50 k ohms
Outputs	Line outputs (phono jacks) Output level 0.435 V (−5 dB) at a load impedance of 50 k ohms Load impedance over 10 k ohms Headphone output Output level, variable from −20 dB to −50 dB at a load impedance of 8 ohms

General

Power requirements	AEP model: 220 V ac, 50/60 Hz (240 V ac adjustable by authorized Sony personnel) UK model: 240 V ac, 50/60 Hz (220 V ac adjustable by authorized Sony personnel) US, Canadian model: 120 V ac, 60 Hz E model: 110, 120, 220 or 240 V ac adjustable, 50/60 Hz
Power consumption	26 watts
Dimensions	Approx. 430 × 105 × 285 mm (w/h/d) (17 × 4¼ × 11¼ inches) including projecting parts and controls
Weight	Approx. 6.1 kg (13 lbs 8 oz)

Peak program meters

Response range	−40 dB to +8 dB
Frequency response	20 - 20,000 Hz ±1.5 dB
Response time	1 millisecond
Decay time (from 0 dB to −20 dB)	750 milliseconds
Overshoot	none

0 dB = 0.775 V

FEATURES

Three-head system
Separate record and playback heads allow optimum gap settings and impedance ratings for distortion-free recording and greatly extended frequency response. For good tape-to-head contact the heads are mounted in one block and each head is separately adjusted for precise azimuth alignment. The three-head system also enables you to monitor the recorded tape while actually recording.

Newly-developed LA (LaserAmorphous) head
The record/playback head is made of a special amorphous magnetic alloy developed by Sony, and its cores are solidly welded by laser. This new highly-durable head provides a wider dynamic range and a more extended frequency response, especially in the high-frequency range. The head is designed to take full advantage of the potential of the metal tapes.

Closed-loop dual-capstan tape drive system
Two pairs of capstans and pinch rollers ensure uniform tape tension and stable tape-to-head contact. As a result, wow and flutter and modulation noise are greatly reduced.

Dolby C-type NR (noise reduction) system
In addition to the conventional B-type Dolby NR system, this cassette deck employs the newly-developed C-type Dolby NR system which reduces tape noise twice as effectively as the B-type system. The C-type system also incorporates an anti-saturation network to improve the high-frequency dynamic range by 4 dB at 10 kHz.

Digital linear counter
This counter indicates the recording or playback time elapsed on the tape so that the tape can be precisely indexed. While conventional displays can only indicate the elapsed recording time, this display can indicate with a minus sign how much recording time remains.

Bright FL-display peak program meters
The peak program meters follow the transient peaks of the music and maintain the peak readings for about 4 seconds. This double indication makes it easy to set critical recording levels precisely.

Remote control operation
Using the optional RM-50 or RM-80 remote control unit, various operations—recording, playback, record muting operation, etc.—can be remotely controlled.
When the RM-65 synchro remote control unit is used to connect this cassette deck with a turntable equipped with a synchro remote control jack, the operation of the cassette deck and the turntable will be synchronized.

Two motors
The two-motor drive system assures accurate and stable tape transport. The capstan is driven by a linear torque BSL (brushless and slotless) motor to keep wow and flutter low and to provide smooth torque.

Useful functions
- Record muting function allows you to easily insert a moderately long blank space between selections.
- Auto play permits one step rewind and playback from the beginning of the tape and the memory function allows you to easily locate any desired point on the tape.
- A timer switch is provided to turn the deck on and off any number of times at preset times set on an optional timer.

TC-K555ES

SAFETY CHECK-OUT (US Model)

After correcting the original service problem, perform the following safety check before releasing the set to the customer:
Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microampers). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2 V AC range are suitable. (See Fig. A)

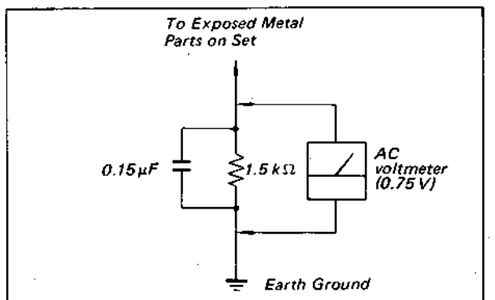

Fig. A. Using an AC voltmeter to check AC leakage.

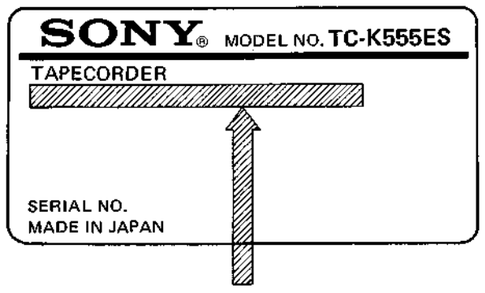
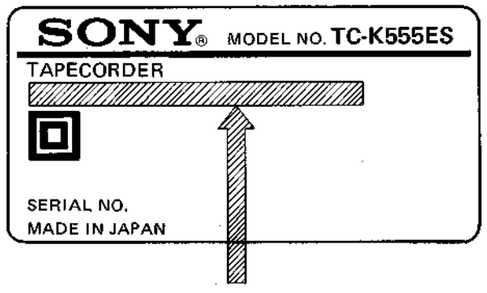
MODEL IDENTIFICATION

– Specification Label –



US, Canadian model: AC 120 V 60 Hz 26 W



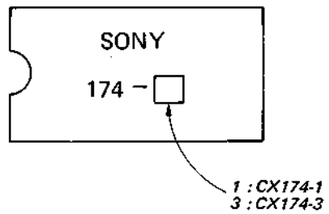
AEP model: AC 220 V ~ 50/60 Hz 26 W
UK model: AC 240 V ~ 50/60 Hz 26 W
E model: AC 110, 120, 220, 240 V ~ 50/60 Hz 26 W

Caution on DOLBY IC (CX174) Replacement

This set uses eight Dolby ICs (CX174). (IC101, 102, 201, 202, 301, 302, 401, 402)

These ICs are either CX174-1 or CX-174-3.

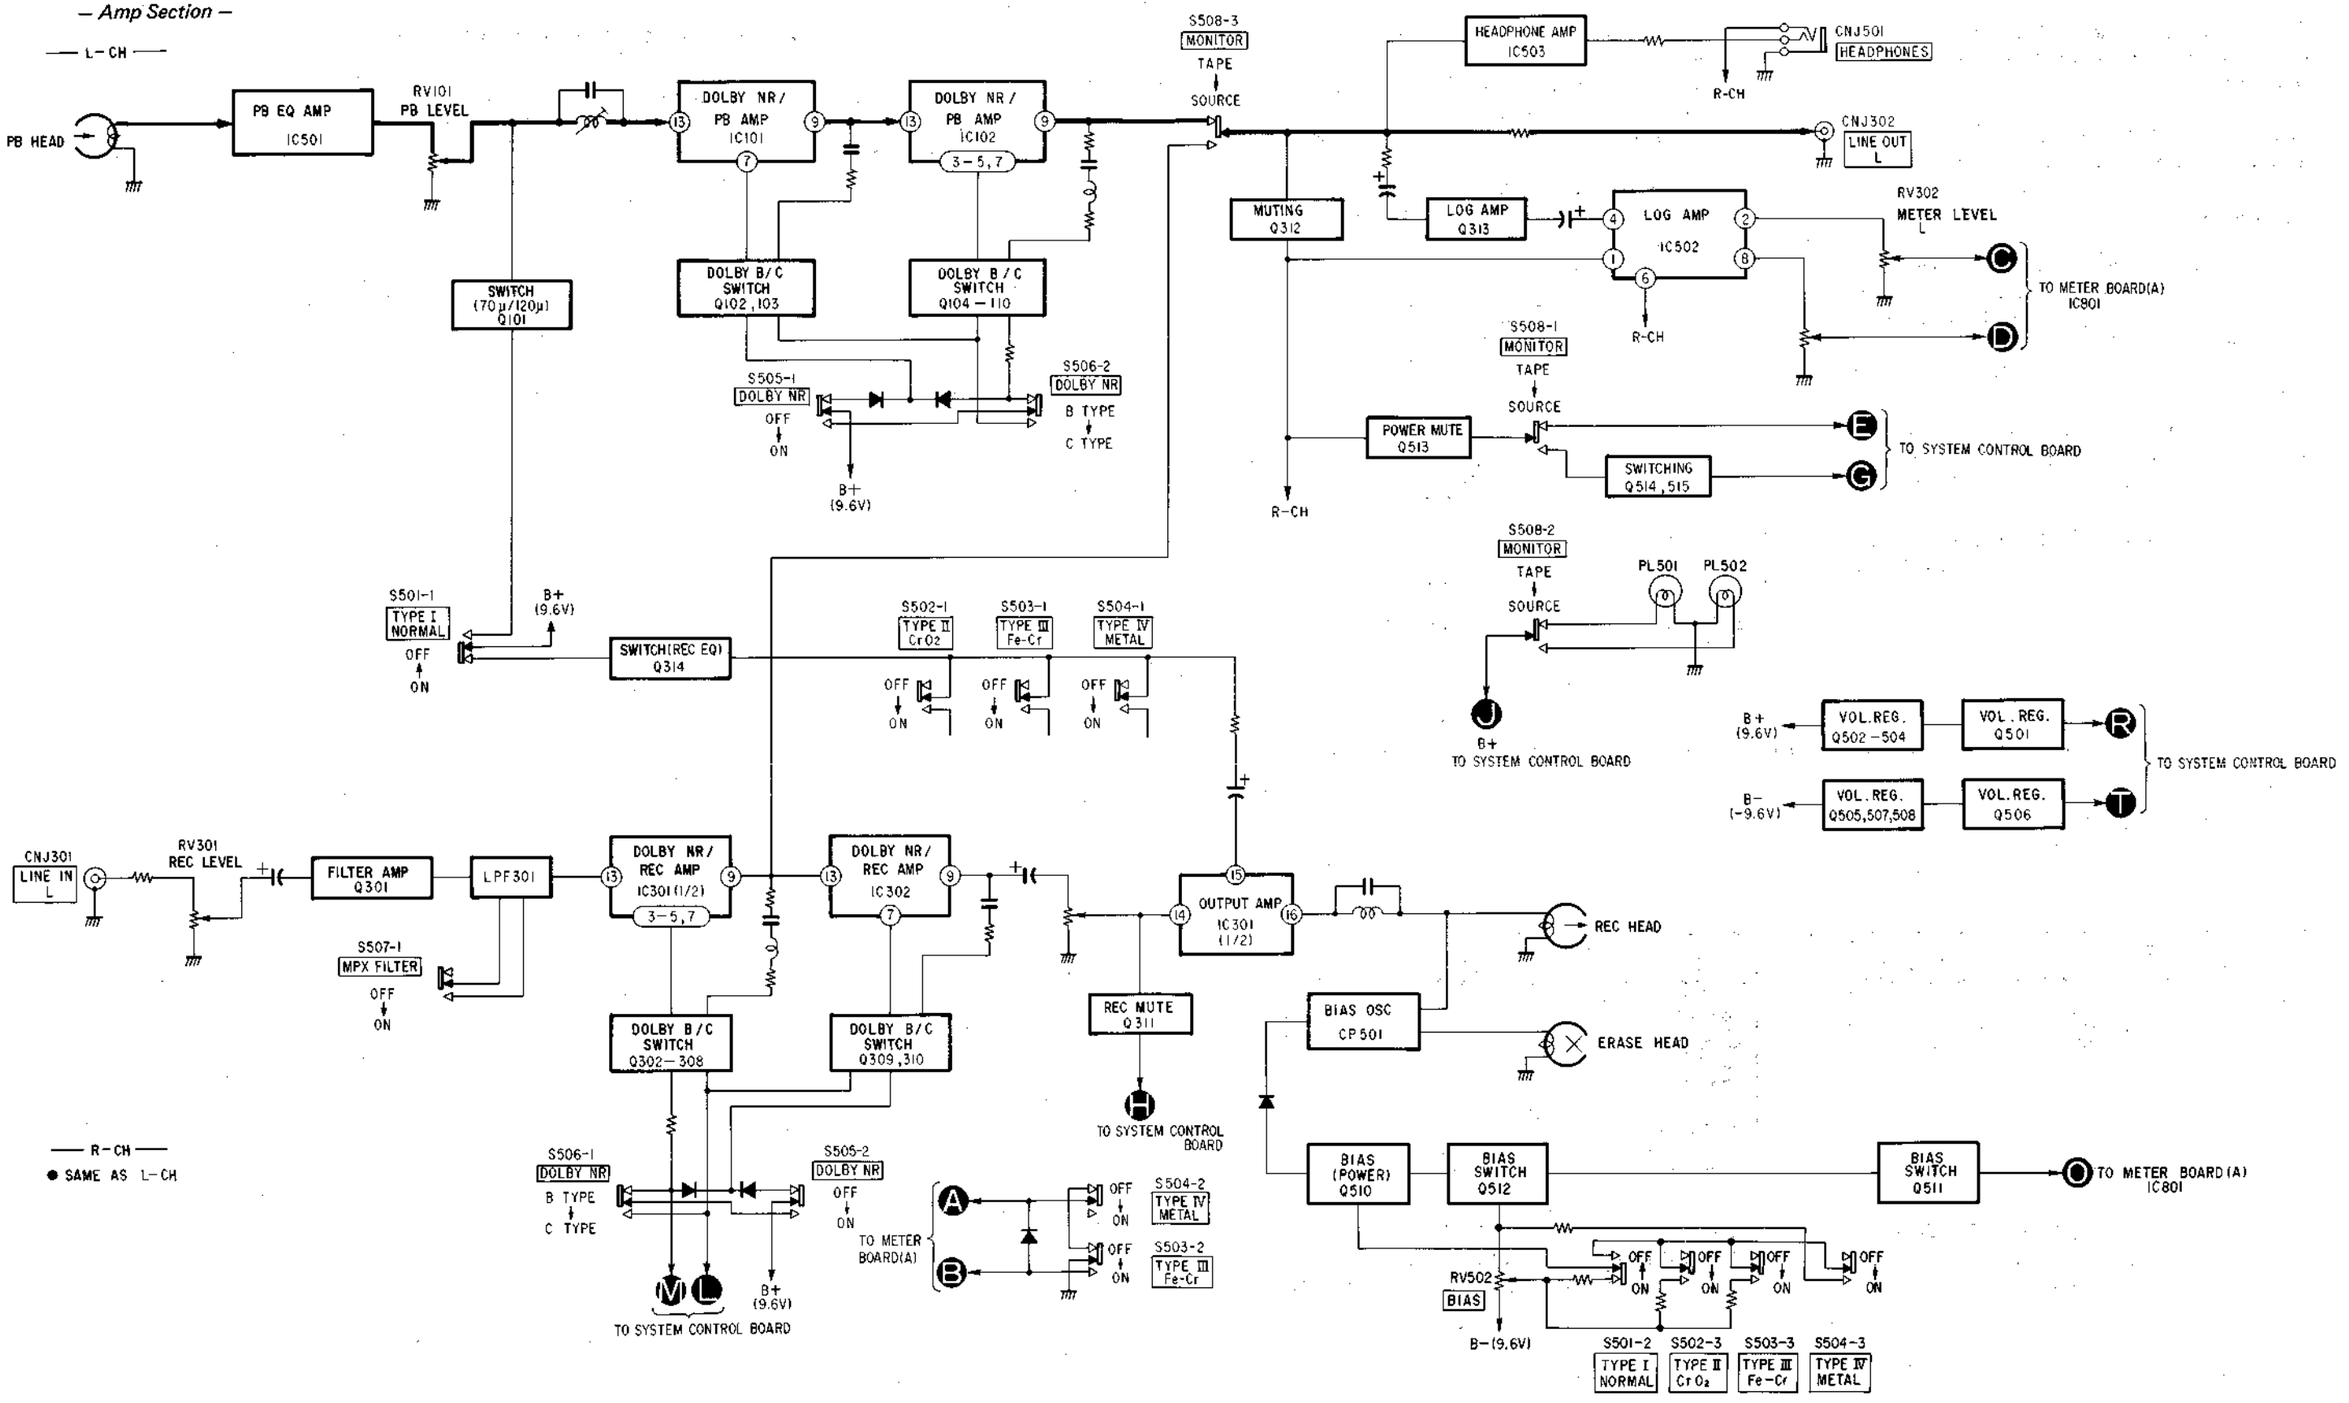
When replacing these ICs, be sure to use the same ICs as the original one.



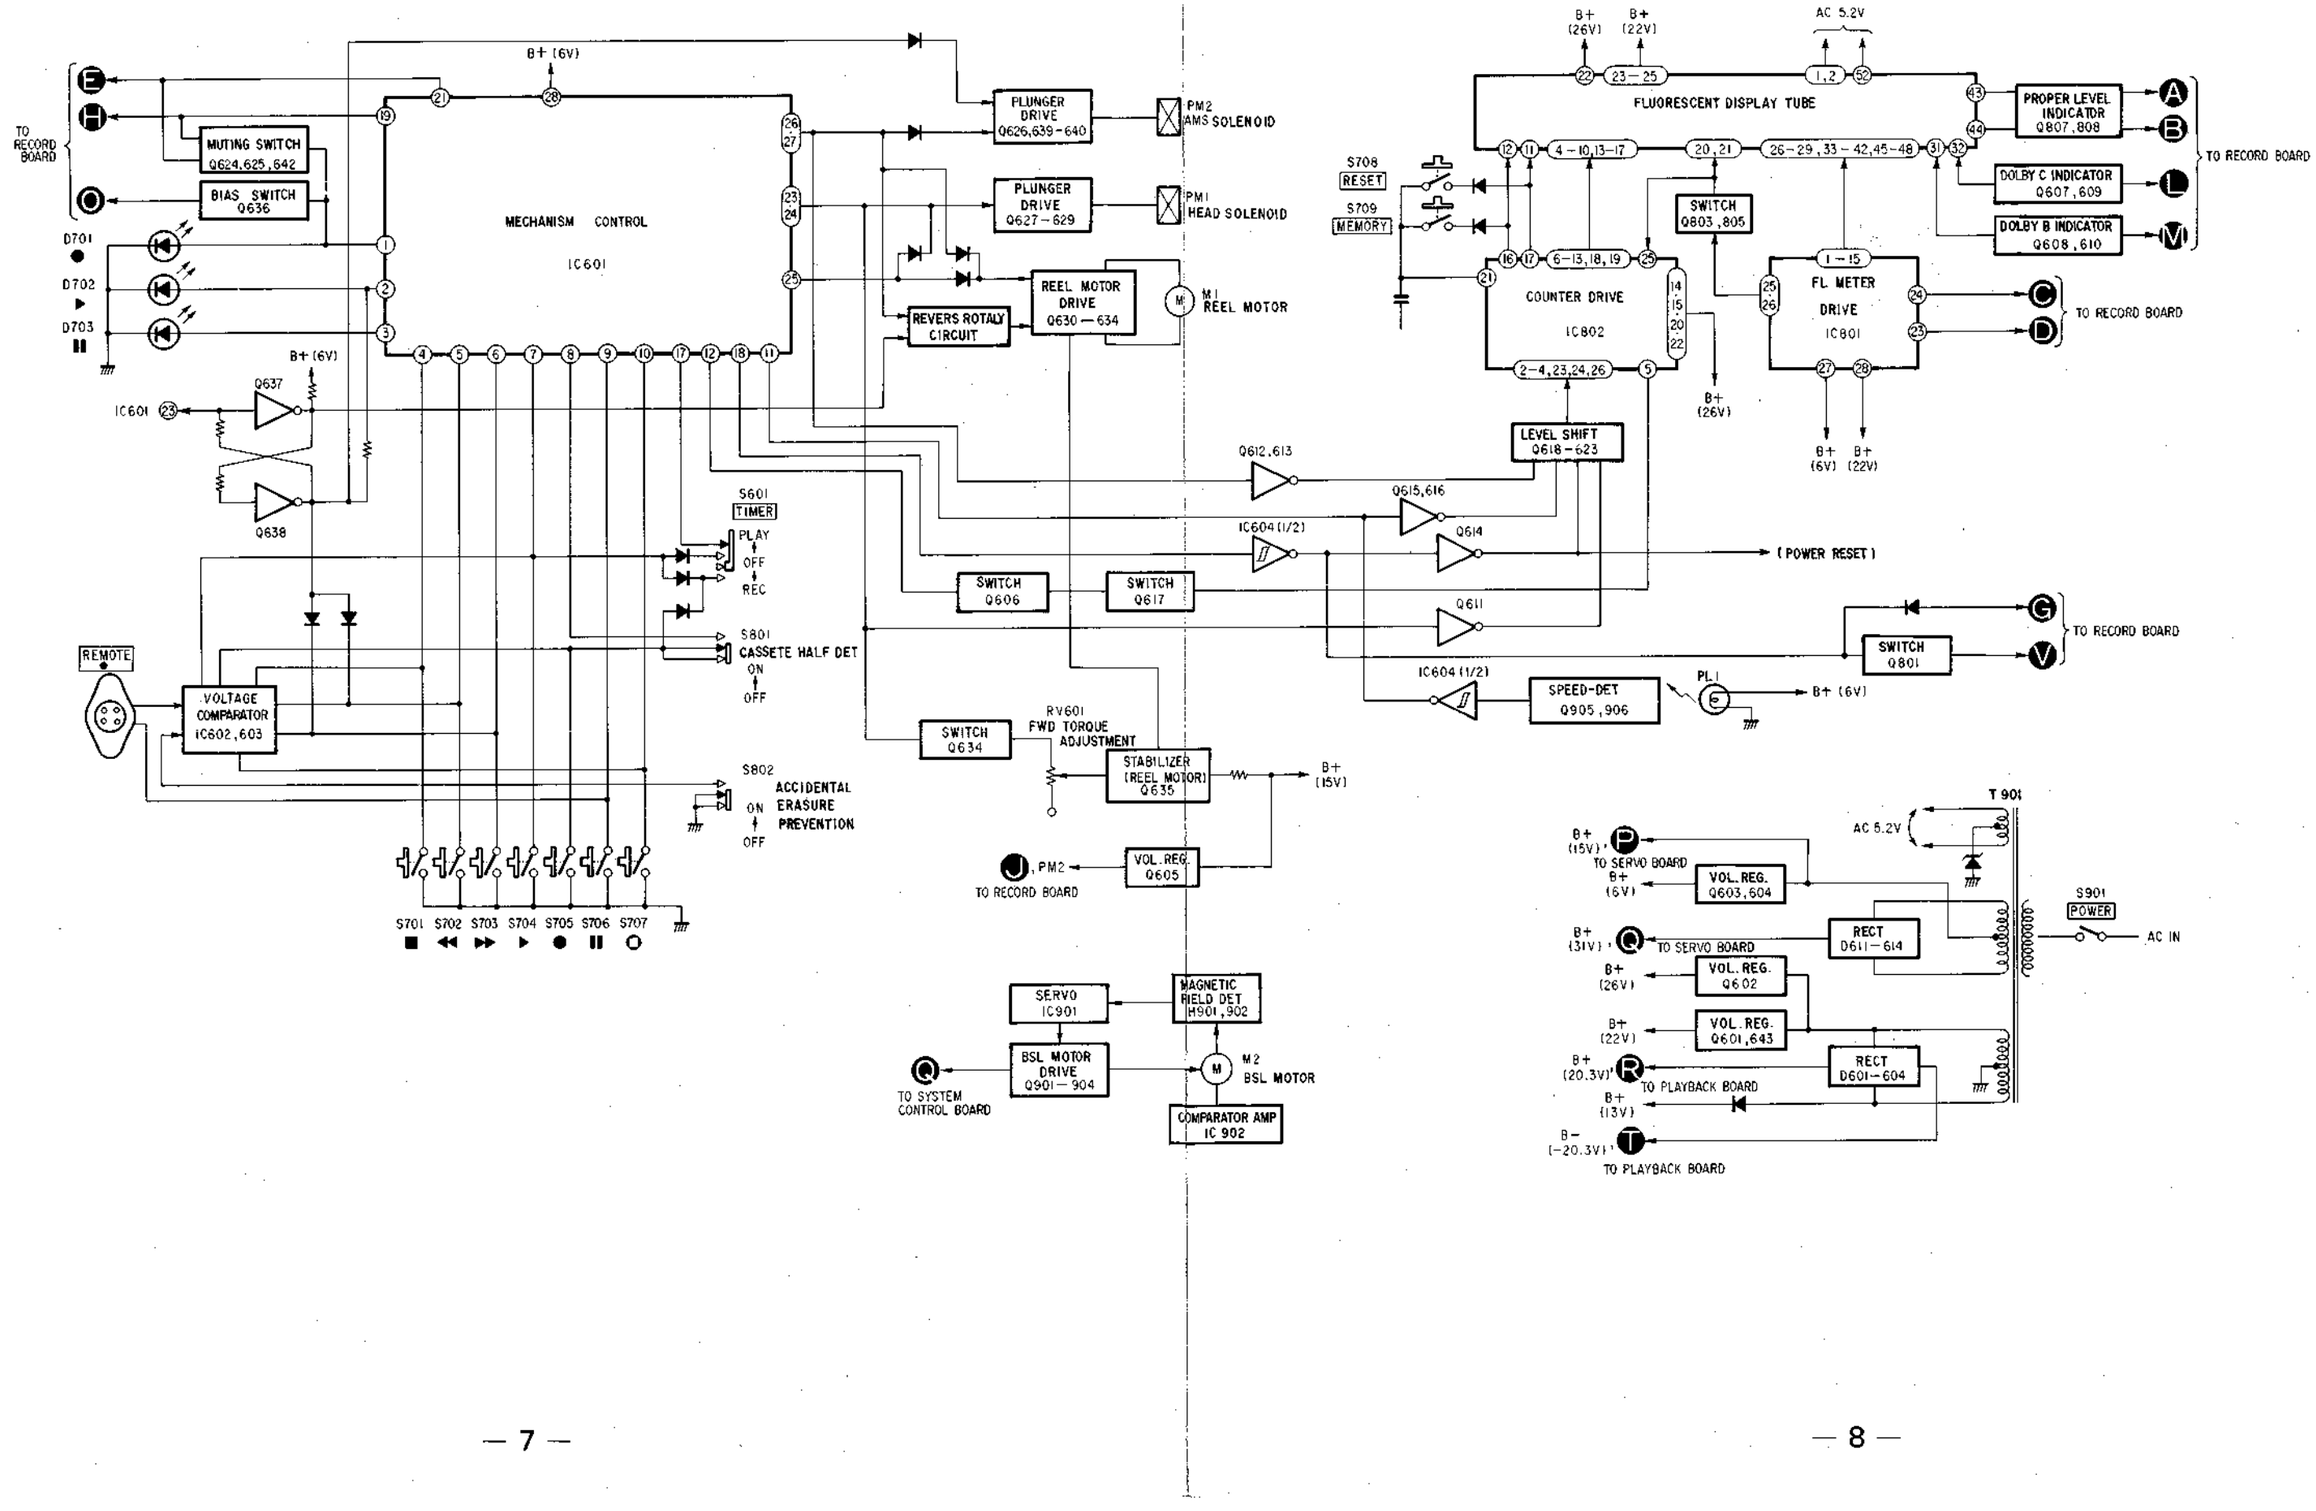
SECTION 1
OUTLINE

1-1. BLOCK DIAGRAMS

– Amp Section –

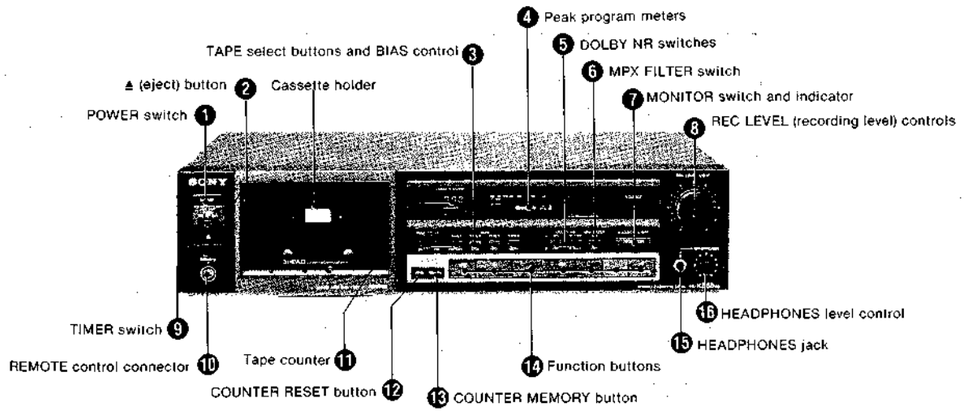


– System Control Section –



1-2. FUNCTION OF CONTROLS

The numbers in the photo are keyed to the following explanations.



1 POWER switch
Depress this switch to turn on the power. The lamp in the cassette holder, the display of the peak program meter and the tape counter will light up. The indicator lamp of the pause button will blink for about 4 seconds, indicating that the function buttons are inoperative during this period.
Press this switch again to turn the power off.

2 ▲ (eject) button
Press this button to open the cassette holder.

3 TAPE select buttons and BIAS control
Depress one of the TAPE select buttons according to the type of tape to be used. When the appropriate button is depressed, the optimum equalization and bias current settings are obtained for recording, and the optimum equalization setting is obtained for playback. When recording using a TYPE I (NORM), TYPE II (CrO_2) or TYPE III (Fe-Cr) tape, adjust the BIAS control. See "Recommended settings for the TAPE select buttons and the BIAS control", on page 11.

4 Peak program meters
With the MONITOR switch set to SOURCE, the meters show the peak input level of each channel, and to TAPE, the meters show recorded levels. They follow the transient peaks of high-level inputs that are too brief to be followed by conventional VU meters so that the optimum recording level can be accurately set. The highest input of each channel is held about 4 seconds on the scale, except when a higher peak occurs before 4 seconds have passed, in which case that peak is immediately indicated.

5 DOLBY NR switches
The left switch turns the Dolby NR* (Noise Reduction) system on and off and the right switch selects either the B-type or C-type Dolby NR system.
To record with the Dolby NR process, depress the ON/OFF switch to the ON position and choose B-TYPE (⎍) or C-TYPE (⎓).
To record without the Dolby NR process, press the ON/OFF switch again to release.
When playing back, set these switches to the same position used in recording.

* "Dolby" and the double-D symbol are trade marks of the Dolby Laboratories Licensing Corporation. Noise reduction system manufactured under license from Dolby Laboratories Licensing Corporation.

6 MPX FILTER switch
Normally set this switch to OFF.
When recording FM stereo broadcasts with the Dolby NR system, set it to ON if the 19 kHz pilot signal and the 38 kHz subcarrier have not been adequately suppressed by the FM tuner or receiver.
If the tuner or the receiver suppresses such signals adequately (most high-quality tuners and receivers will), you do not have to set this switch to ON.

7 MONITOR switch and indicator
When adjusting the recording level, set this switch to the released position (SOURCE ⎍) to allow monitoring of the sound to be recorded. During playback, depress this switch (TAPE ⎓) to allow monitoring of the recorded sound. According to the MONITOR switch setting, "SOURCE" or "TAPE" will appear in the indicator window.
During recording, use this switch to monitor either the source or the recorded sound.

8 REC LEVEL (recording level) controls
These controls adjust the recording level. The knob nearest the panel is for the left channel and the other knob for the right channel. To adjust the level of the left or right channel only, turn the appropriate knob while holding the other knob.

9 TIMER switch
You can set the unit to record or play back at a predetermined time by connecting any commercially available timer. To record, set this timer switch to REC. To play back, set it to PLAY.

10 REMOTE control connector
Connect the optional RM-50 (wired) or RM-80 (wireless) remote control unit to operate the tape transport functions from a distance. Synchronized operation is also possible with selected Sony turntables, using the optional RM-65 synchro remote control unit. Read the instruction manual of your remote control unit before operating it.

11 Tape counter
This counter indicates the tape running time.

12 COUNTER RESET button
Press this button to reset the tape counter to "0.00."

13 COUNTER MEMORY button
Press to rewind the tape to the "0.00" point on the tape counter. The word "MEMORY" is displayed below the tape counter. Pressing the ► button together with the ◄◄ button automatically starts playback from "0.00."
When you do not use the memory function, press this button again. The word "MEMORY" will disappear.

14 Function buttons
It is possible to switch directly from one mode to another. The indicator lamps light when the tape deck is in the forward, record or pause mode.

◄◄ (rewind) button : Press this button to rewind the tape. This button is also used, with the ► button, to initiate auto play.

■ (stop) button : To stop the tape, press this button. The tape will stop automatically when it is completely wound in either direction.

► (forward) button : Press this button to play the tape back. To record, press this button while holding the ● button down.

►► (fast-forward) button : Press this button to advance the tape rapidly.

● (record) button : Press this button together with the ► button to start recording.

II (pause) button : To pause for a moment during recording or playback, press this button. This button is also used to control more precisely the start of recording and to release the record muting mode.

⊙ (record muting) button : Press this button to eliminate unwanted material and to insert a blank space during recording.

15 HEADPHONES jack
Headphones may be inserted either to monitor the input signals to be recorded or to listen to a recording in the playback mode.
Headphone volume is adjustable with the HEADPHONES control.

16 HEADPHONES level control
This control adjusts the headphone level. This setting does not affect the peak program meters or the output level of the LINE OUT jacks at the rear.

TC-K555ES

1-3. RECORDING

RECOMMENDED SETTINGS FOR THE TAPE SELECT BUTTONS AND BIAS CONTROL

Press the appropriate TAPE select button referring to the recommended settings listed below. When recording using a TYPE I (normal), TYPE II (CrO_2) or TYPE III (Fe-Cr) tape, adjust the BIAS control also.

While the settings are optimum for Sony cassettes, you may want to change them when using cassettes produced by other manufactures.

Tape list (for Canada)

Tapes (C-60 and C-90)		Type of tape
SONY : LNX, SHF MAXELL : UD, UD-XL I, XL I-S SCOTCH : MASTER I	AMPEX : GRAND MASTER I FUJI : FX-I MEMOREX : MRX-1 TDK : AD, AD-X	TYPE I (NORMAL)
SONY : UCX-S, EHF MAXELL : UD-XL II, XLII-S SCOTCH : MASTER II	AMPEX : GRAND MASTER II FUJI : FX-II MEMOREX : HIGH BIAS II TDK : SA, SA-X	TYPE II (CrO_2)
SONY : FeCr SCOTCH : MASTER III	BASF : PROFESSIONAL III	TYPE III (Fe-Cr)
SONY : METALLIC	Other metal tapes	TYPE IV (METAL)

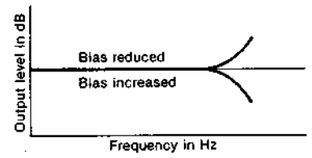
Tape list (for other countries)

Tapes (C-60 and C-90)		Type of tape
SONY : AHF, BHF BASF : LH-X, Professional I MAXELL : UD, UD-XL I, XL I-S SCOTCH : MASTER I	AGFA : SUPER FERRO DYNAMIC FUJI : FX-I PHILIPS : SUPER FERRO-I TDK : AD	TYPE I (NORMAL)
SONY : UCX-S, UCX BASF : Professional II MAXELL : UD-XLII, XLII-S SCOTCH : MASTER II	AGFA : STEREO CHROM FUJI : FX-II PHILIPS : CHROMIUM TDK : SA, SA-X	TYPE II (CrO_2)
SONY : FeCr BASF : Professional III SCOTCH : MASTER III	AGFA : CARAT PHILIPS : FERRO CHROMIUM	TYPE III (Fe-Cr)
SONY : METALLIC	Other metal tapes	TYPE IV (METAL)

The three-head system permits you to monitor the recorded sound while in the record mode, so that you can easily check the effects of various settings of the TAPE select buttons and the BIAS control.

BIAS control

This control regulates bias current for TYPE I (NORM), TYPE II (CrO_2) and TYPE III (Fe-Cr) cassettes. The full counterclockwise position decreases bias by about 20% from the center position and the full clockwise position increases it by about 20%. Generally, as bias is increased, extreme high frequencies will be suppressed. As bias is reduced, extreme high frequencies will be boosted. You can then find the appropriate bias setting for each brand of TYPE I, TYPE II and TYPE III cassettes.

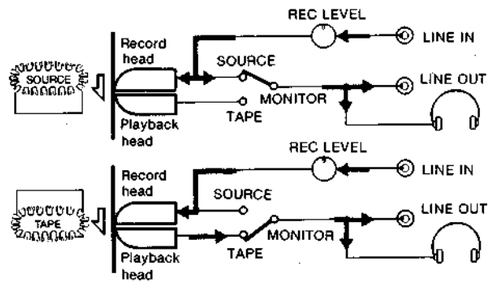


RECORD MONITORING

As this tape deck has separate record and playback heads, you can easily compare the source and the recorded sounds in the recording mode by using the MONITOR switch. You can check the recording level and whether there is any contamination on the heads that is affecting the recording.

●If the connected amplifier has a tape monitor selector, source/tape comparison is possible with the amplifier monitor selector. In this case, set the tape deck MONITOR switch to TAPE.

MONITOR switch setting and signal flow



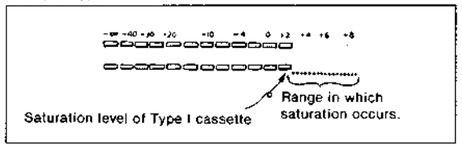
TO RECORD MATERIAL ONTO A SPECIFIC PORTION OF TAPE

When you want to re-record a specific portion of tape or to insert new material between two points on a tape you will find it handy to be able to change directly from the playback to the record mode by pressing the ● REC button while holding the ► button down.

1-4. TO ADJUST THE RECORDING LEVEL

Adjust the recording level while monitoring on the peak program meters the input level of the program source to be recorded. If the recording level setting is too high, the recording will be distorted, and if the setting is too low, the recording will be noisy. The recording level should be set as high as possible while still avoiding distortion. This level will depend on the type of tape being used. When the TAPE button is pressed, the range above the saturation level of the selected type of tape is indicated by the red line. Generally speaking, adjust the recording level by making sure that the meters deflect only to the left end of the red line at the highest signal level.

Example: Type I cassette



Since the saturation level of any tape is lower in the higher frequencies than in the lower frequencies, the recording level may still be too high if adjusted in this way if the program to be recorded contains many high frequency signals. Consideration has to be given to the program source to be recorded as well as to the characteristics of the cassette to be used, since each cassette, even cassettes using the same type of tape, may have different characteristics. The following table will provide you with a starting point in setting the recording level of various kinds of programs when using Sony cassettes.

Type of tape	Sony cassettes	Low and mid freq. range programs (vocal, etc.)	Mid and high freq. range programs (piano, guitar, etc.)
I	BHF	+ 3 dB	+ 1 dB
	AHF	+ 4 dB	+ 2 dB
II	UCX	+ 3 dB	+ 2 dB
III	FeCr	+ 5 dB	+ 1 dB
IV	METALLIC	+ 6 dB	+ 6 dB

SECTION 2
DISASSEMBLY

Note: Follow the disassembly procedure in the numerical order given.

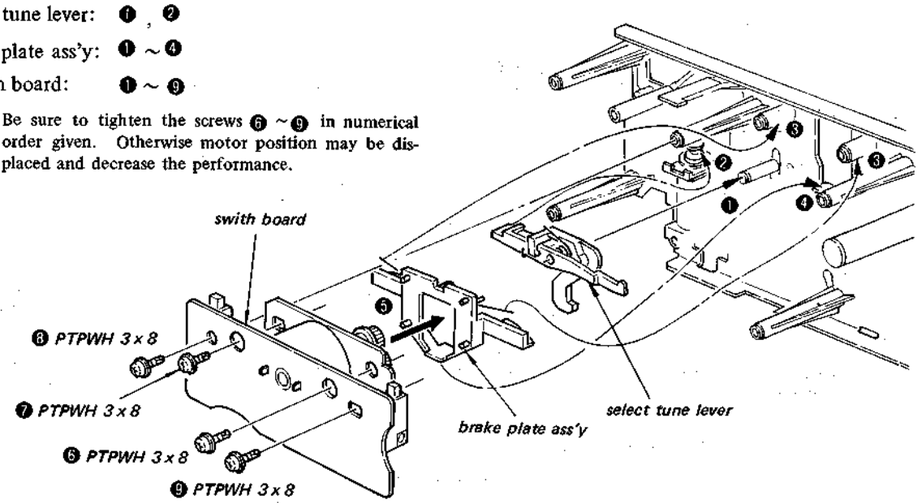
Note: Be sure to tighten the screws ❻ ~ ❾ in numerical order given. Otherwise motor position may be displaced and decrease the performance.



SECTION 3
ADJUSTMENTS

3-1. MECHANICAL ADJUSTMENTS

PRECAUTION

1. Clean the following parts with a denatured-alcohol-moistened swab:

record/playback head	pinch roller
erase head	rubber belts
capstan	idlers

2. Demagnetize the record/playback head with a head demagnetizer.
3. Do not use a magnetized screwdriver for the adjustments.
4. After the adjustments, apply suitable locking compound to the parts adjusted.
5. The adjustments should be performed with the rated power supply voltage unless otherwise noted.

FF/REW Torque Measurement

Torque	Torque meter	Meter reading
FF REW	CQ-201B	65 – 85 g•cm

Tape Path Adjustment

1. Insert a mirror cassette (CQ-009C).
2. Set for forward mode and confirm that there is no tape curl at the tape guides and recording head.
3. If there is curl, turn the adjust nut and raise and lower the supply side pinch roller (with tape guide attached) to adjust.
4. If step 3 does not get rid of the curl, adjust further by turning adjustment screws A, B, C less than ½ turn in the same direction at the same angle.
5. Confirm that the erase head height is as shown in Figure 2.
6. Check tape wrinkling (zigzag).
   Tighten adjust screw D if the tape is wrinkling up. (clockwise)
   Loosen screw D if the tape is wrinkling downward. (conterclockwise)
   Repeat step 5 after adjusting screw D as necessary, within ½ turn.
7. Lock the screw with locking compound.

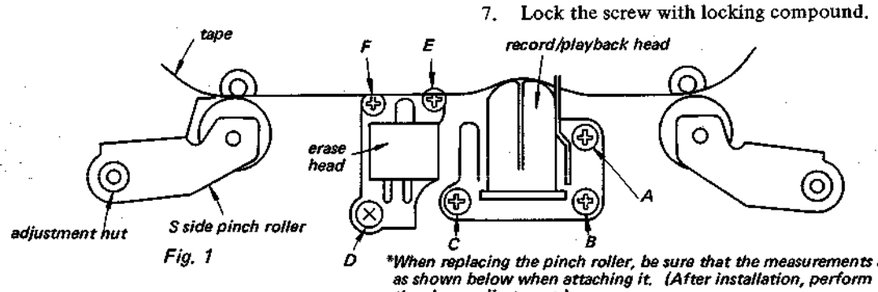


Fig. 1

*When replacing the pinch roller, be sure that the measurements are as shown below when attaching it. (After installation, perform the above adjustment.)

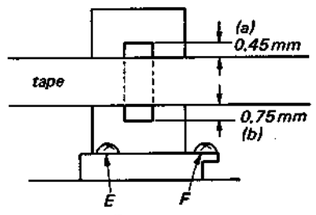

Fig. 2

1. Loosen screws E, F so that the ratio between a and b is 3 : 5 and adjust with the adjustment shim.
2. When changing erase head height, check for tape wrinkling.

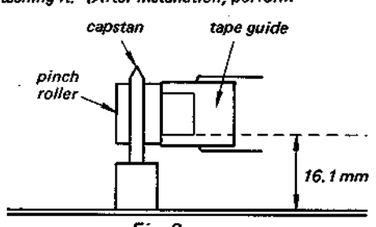

Fig. 3

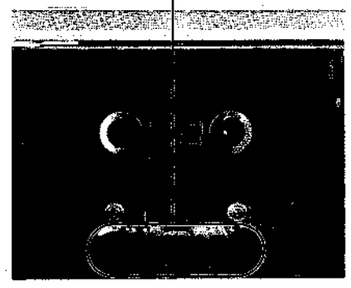
tape path adjustment



Head Base Position Adjustment

Perform the following adjustment when replacing the head base solenoid.

Perform with the old head base solenoid still in place.

1. Press the head base solenoid core with the finger until the head base stops moving.
2. Draw a line as shown in Figure 2. Replace with the new head base solenoid.
3. Loosen the mounting screw, match with the line drawn in step 2, and tighten the screw.
4. Lock the screw after adjustment.

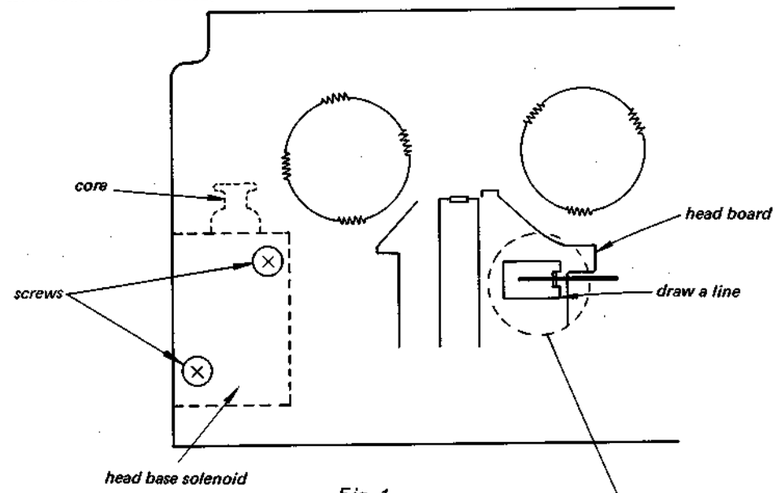


Fig. 1

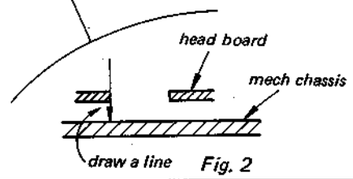

Fig. 2

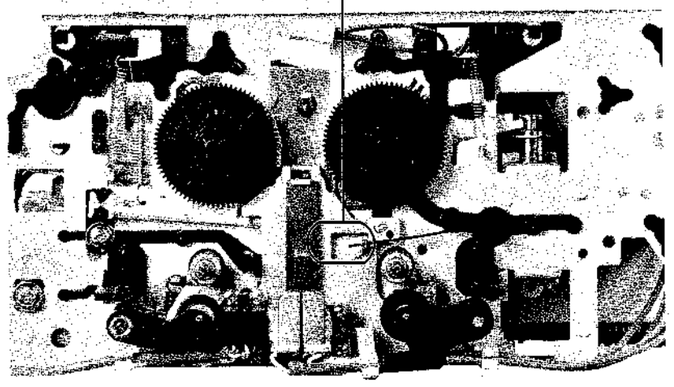
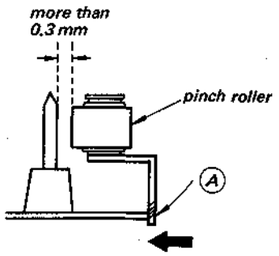
head base position adjustment



Pinch Roller Clearance Adjustment

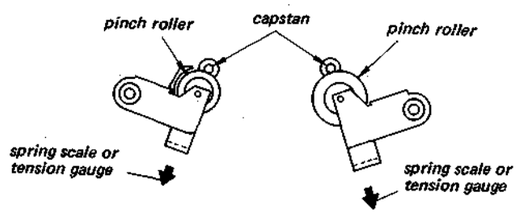
1. Confirm that the clearance between the pinch roller and capstan is more than 0.3 mm in pause mode.
2. If it is less than 0.3 mm, bend Ⓐ in the direction of the arrow.



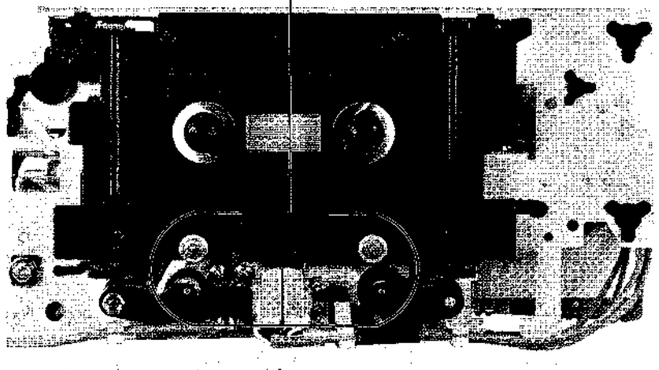
Pinch Roller Pressure Measurement

1. Confirm that the pinch roller is parallel to the capstan.
2. Set in forward, move the pinch roller away from the capstan, then back toward it, and measure the value at the point where the pinch roller begins to rotate.

T side	270 – 330 g
S side	180 – 280 g



pinch roller clearance adjustment

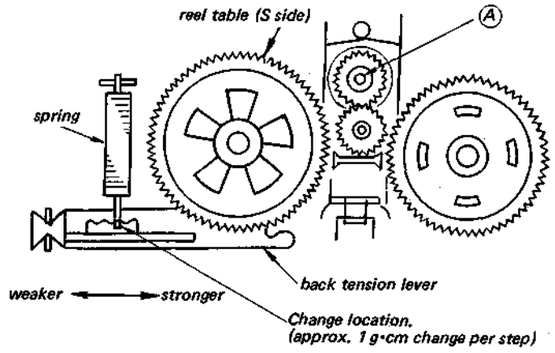


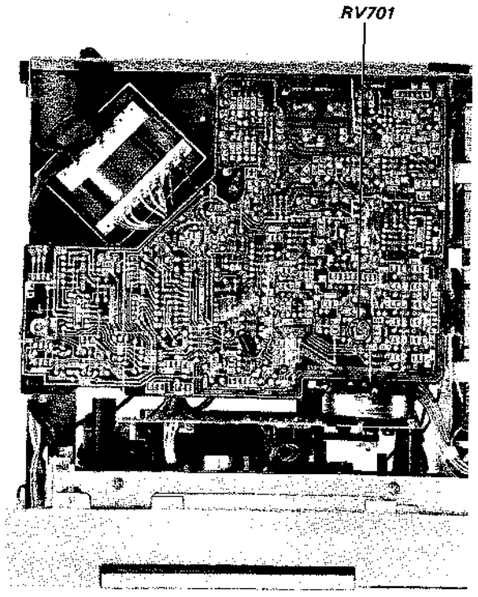
Forward Torque Adjustment

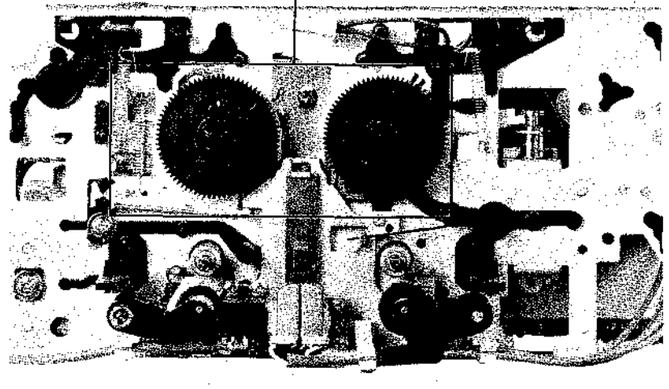
1. Remove the ornamental plate.
2. Press the cassette detection switch and T side reel table simultaneously by hand and then press the forward button. In this state, hold the T reel table so that it does not rotate.
3. Now adjust RV701 to the position where Ⓐ begins to rotate.
   (It will shut off immediately, so press the forward button to repeat.)
4. Next insert CQ-102C, and measure forward torque and back tension torque. If back tension torque is not within the specifications, change the location where the spring is hooked.

Specifications:

forward torque:	30 – 60 g•cm
back tension torque:	7 – 10.5 g•cm







3-2. ELECTRICAL ADJUSTMENTS

Note: The adjustment should be performed in the order given in this service manual.
The adjustments should be performed for both L-CH and R-CH.

- Set the TAPE switches according to the tape as follows.

Tape	TAPE switch
CS-15	TYPE I
CS-25	TYPE II
CS-30	TYPE III
CS-40	TYPE IV

- Switches and controls should be set as follows unless otherwise specified.

DOLBY NR switch: OFF
TAPE switch: TYPE I
TIMER switch: OFF
LINE OUT/HEADPHONES: MAX

- Standard Record:
Deliver the standard input signal level to the input jack and set the REC LEVEL control to obtain the standard output signal level.

Standard Input Level

	LINE IN
source impedance	10 kΩ
input level	0.25 V (-10 dB)

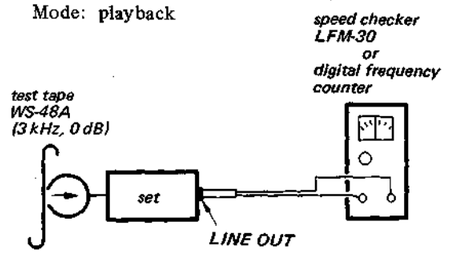
Standard Output Level

	HEADPHONES	LINE OUT
load impedance	8 Ω	47 kΩ
output level	77 mV (-20 dB)	0.44 V (-5 dB)

Tape Speed adjustment

Procedure:

Mode: playback

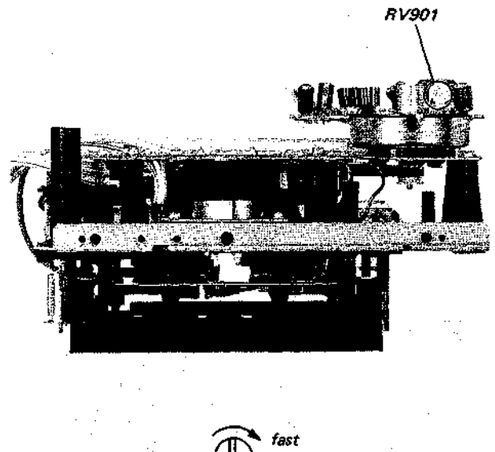


Specification:

Speed checker	Digital frequency counter
-0.17 to +0.17%	2,995 – 3,005 Hz

Frequency difference between the beginning and the end of the tape should be within 0.34% (10 Hz).

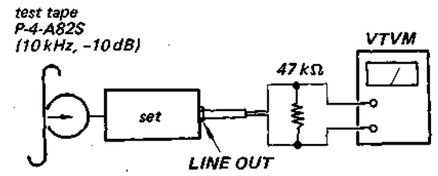
Adjustment Location:



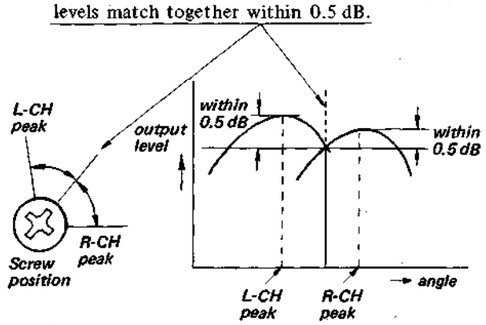
Playback Head Azimuth Adjustment

Procedure:

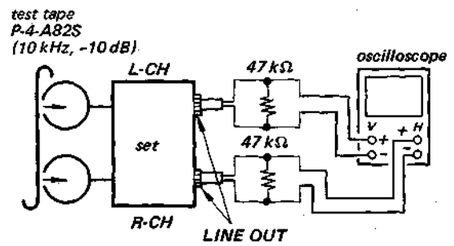
1. Mode: playback



2. Turn the adjustment screw for the maximum output levels. If these levels do not match, turn the adjustment screw until both of output levels match together within 0.5 dB.

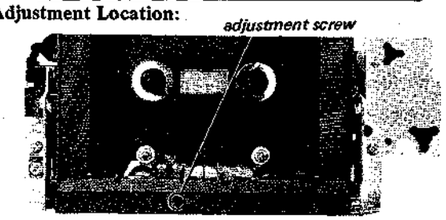


3. Phase Check
Mode: playback



Screen pattern				
in phase	45°	90°	135°	180°
good			wrong	

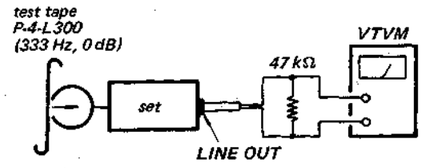
Adjustment Location:



Playback Level Adjustment

Procedure:

Mode: playback



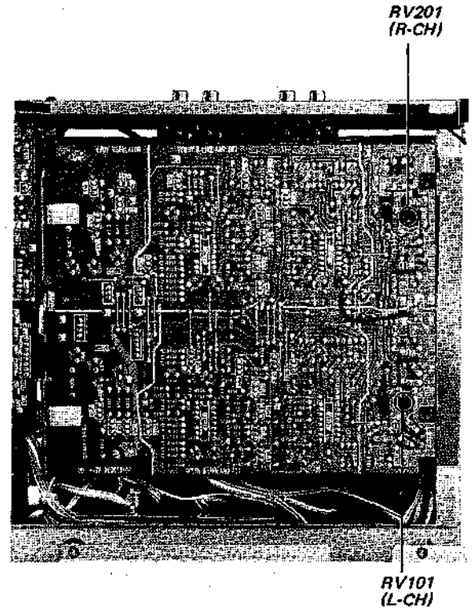
Specification:

LINE OUT level: 0.52 ~ 0.59 V
(-3.5 ~ -2.5 dB)
Level difference between channels:
less than 0.5 dB

Check that the LINE OUT level does not change in playback mode while changing the mode from playback to stop several times.

Adjustment Location:

– playback board –



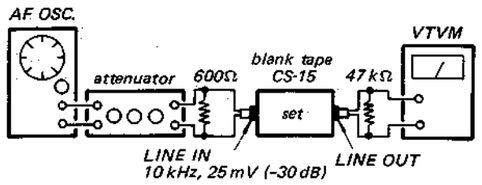
Record Head Azimuth Adjustment (Record head azimuth adjustment should be made later than playback head azimuth adjustment.)

Setting:

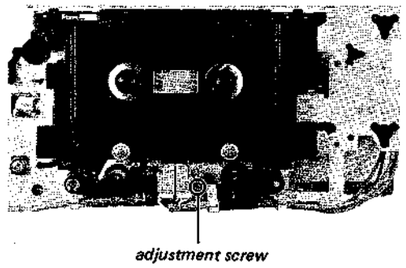
MONITOR: TAPE
REC LEVEL control: standard record (See page 23)
TAPE: TYPE I

Procedure:

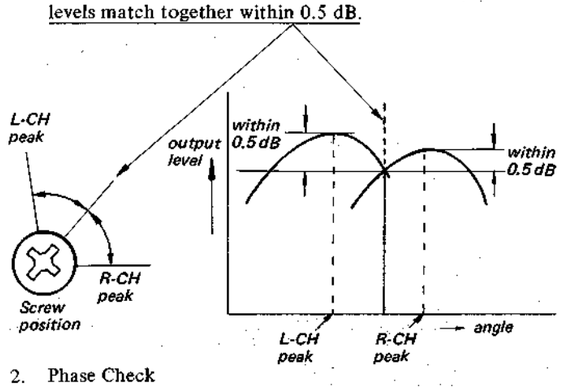
record and playback mode



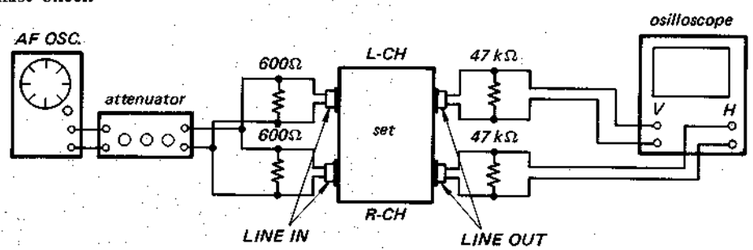
Adjustment Location:

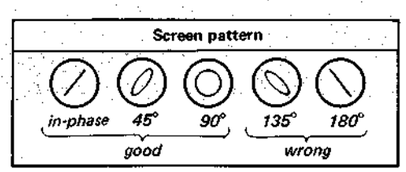


1. Turn the adjustment screw for the maximum output levels. If these levels do not match, turn the adjustment screw until both of output levels match together within 0.5 dB.



2. Phase Check





Adjust the screw so that L-CH and R-CH are in phase.

Specification:

Phase difference between L-CH and R-CH: less than 90°
Level difference between L-CH and R-CH: less than 1 dB

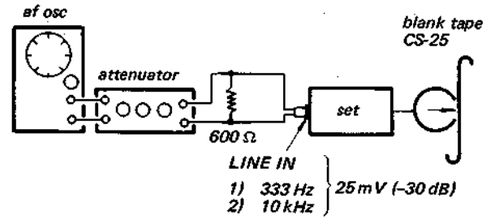
Record Bias Adjustment

Setting:

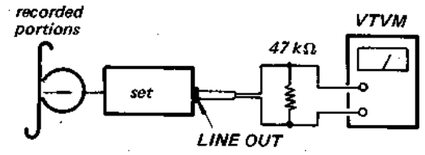
REC LEVEL control: standard record (See page 23)

Procedure:

1. Mode: record



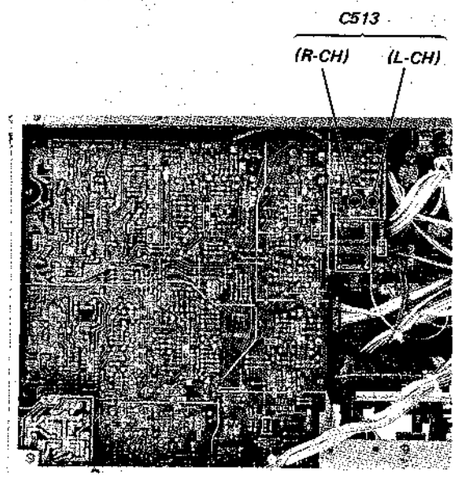
2. Mode: playback



Adjust C513 (L-CH), (R-CH) so that the LINE OUT level of 333Hz signal is 0dB relative to that of 10kHz.

Adjustment Location:

– record board –



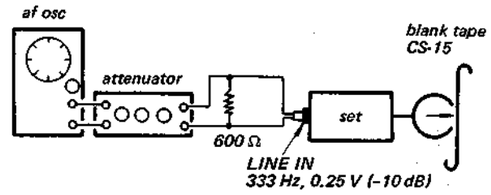
Record Level Adjustment

Setting:

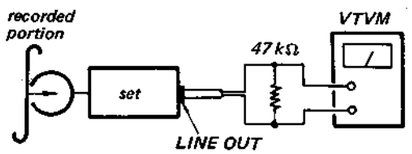
standard record (See page 23)

Procedure:

1. Mode: record



2. Mode: playback

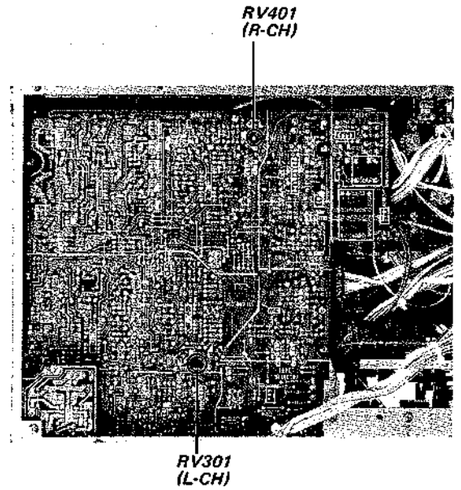


Specification:

LINE OUT level: 0.41 ~ 0.46 V (-5.5 ~ -4.5 dB)

Adjustment Location:

– record board –



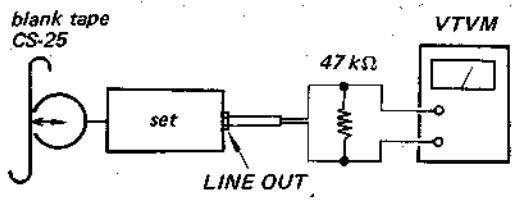
Bias Trap Adjustment

Setting:

MONITOR: TAPE
TAPE: TYPE IV

Procedure:

1. record and playback mode



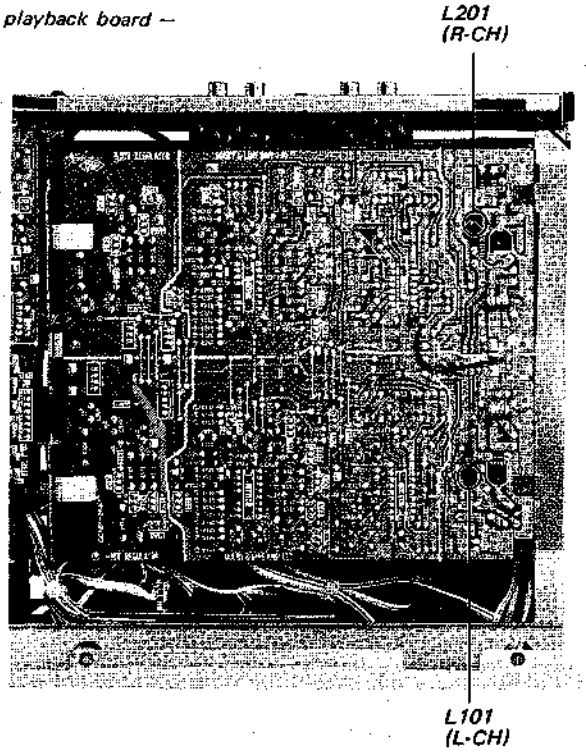
In record and forward mode, adjust L101 (L-CH), L201 (R-CH) so that the LINE OUT level is minimum on the VTVM.

Specification:

LINE OUT level: less than 4.4 mV (-45 dB)

Adjustment Location:

– *playback board* –



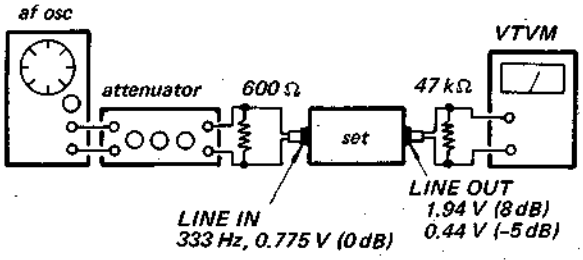
Level Meter Calibration

Setting:

MONITOR: SOURCE

Procedure:

1. Mode: record

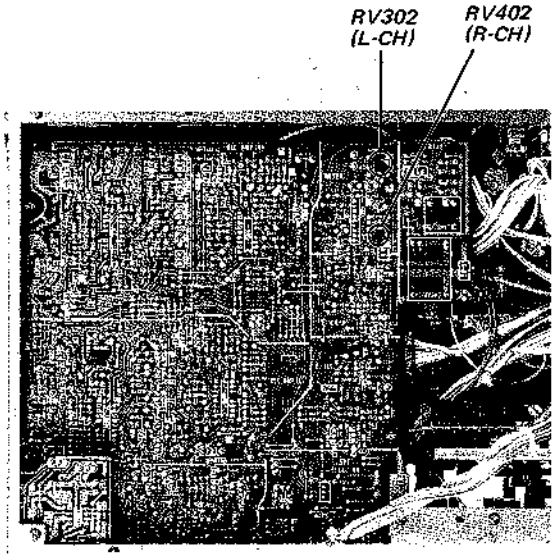


1. Set the REC LEVEL control so that the LINE OUT level is -5 dB.
2. Adjust RV302 (L-CH) and RV402 (R-CH) so that the LEDs including -4 dB (right-most element) light up.
3. Set the REC LEVEL control so that the LINE OUT level is +8 dB.
   Make sure the LED meter indicates -4 dB (0 VU) in this time.

Note: Slide the REC LEVEL control rightward slowly. (Be careful to peakhold indication.)

Adjustment Location:

– *record board* –



DOLBY C Level Adjustment

Setting:

MONITOR: TAPE
TAPE: TYPE I

1. Set DOLBY switch to DOLBY C. Adjust for the specification.

Specification:

- LINE OUT level: 55 mV ~ 35 mV (–23 dB ~ –27 dB)
- Level difference between L-CH and R-CH: less than 2 dB

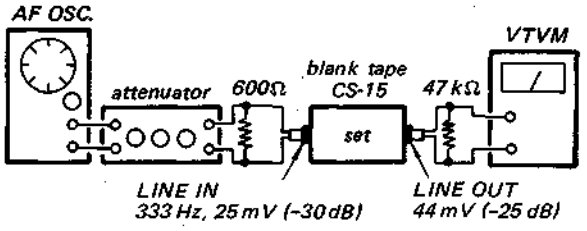
Adjustment Location:

– playback board –

If LINE OUT level is higher than the specification, unsolder the portion marked by ❶ (L-CH), ❷ (R-CH).

Procedure:

record and playback mode



– record board –

If LINE OUT level is lower than the specification, unsolder the portion marked by ❸ (L-CH), ❹ (R-CH).

Drive Signal for "a" Segment of Fluorescent Display Tube.

1) In case of all "a" segments are not lit, i.e., all of the four digits are "1" or "4".

2) In case of only one out of four "a" segments lit, i.e., one of the four digits is "0", "2", "3", "5", "6", "7", "8", or "9" and all others are "1" or "4".

3) In case of only two out of four "a" segments lit as in the case of 2) above.

4) In case of only three out of four "a" segments lit as in the case of 2) above.

5) In case of all of the four "a" segments lit likewise.

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked " ♦ " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (△-△△△-△△△-XX or △-△△△△-△△△-X) may be different from those used in the set.

CAPACITORS:

- All capacitors are in μF. Common capacitors are omitted. Refer to the following lists for their part numbers. MF:μF, PF:μμF.

RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.
- F : nonflammable

SEMICONDUCTORS

In each case, U : μ, for example:
UA···: μA···, UPA···: μPA···, UPC···: μPC, UPD···: μPD···

COILS

- MMH : mH, UH : uH

NOTE:
- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked " ♦ " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

SEMICONDUCTORS
In each case, U : μ, for example:
UA···: μA···, UPA···: μPA···, UPC···: μPC, UPD···: μPD···

CAPACITORS:
- All capacitors are in μF. Common capacitors are omitted. Refer to the following lists for their part numbers. MF: μF, PF: μμF.

RESISTORS
- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.
- F : nonflammable

COILS
- MMH : mH, UH : μH

The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque ⚠ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

NOTE:
- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked " ♦ " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

SEMICONDUCTORS
In each case, U : μ, for example:
UA···: μA···, UPA···: μPA···, UPC···: μPC, UPD···: μPD···

CAPACITORS:
- All capacitors are in μF. Common capacitors are omitted. Refer to the following lists for their part numbers. MF: μF, PF: μμF.

RESISTORS
- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.
- F : nonflammable

COILS
- MMH : mH, UH : μH

The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque ⚠ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

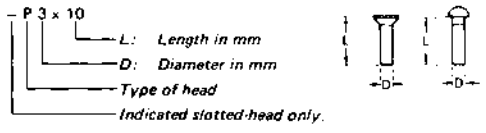
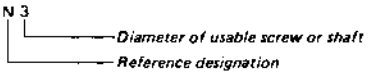
HARDWARE NOMENCLATURE

Screw:



Nut, Washer, Retaining ring:



Reference Designation	Shape	Description	Remarks
SCREWS			
P		pan-head screw	binding-head (B) screw for replacement
PWH		pan-head screw with washer face	binding-head (B) screw and flat washer for replacement
PS PSP		pan-head screw with spring washer	binding-head (B) screw and spring washer for replacement
PSW PSPW		pan-head screw with spring and flat washers	binding-head (B) screw and spring and flat washers for replacement
R		round-head screw	binding-head (B) screw for replacement
K		flat-countersunk-head screw	
RK		oval-countersunk-head screw	
B		binding-head screw	
T		truss-head screw	binding-head (B) screw for replacement
F		flat-fillister-head screw	
RF		fillister-head screw	
BV		brazier-head screw	

Reference Designation	Shape	Description	Remarks
SELF-TAPPING SCREWS			
TA		self-tapping screw	ex: TA, P 3 x 10
PTP		pan-head self-tapping screw	binding-head self-tapping (TA, B) screw for replacement
PTPWH		pan-head self-tapping screw with washer face	binding-head self tapping (TA, B) screw and flat washer for replacement
PTTWH		pan-head thread-rolling screw with washer face	binding-head (B) screw and flat washer for replacement
SET SCREWS			
SC		set screw	
SC		hexagon-socket set screw	ex: SC 2.6 x 4, hexagon socket
NUT			
N		nut	
WASHERS			
W		flat washer	
SW		spring washer	
LW		internal-tooth lock washer	ex: LW3, internal
LW		external-tooth lock washer	ex: LW3, external
RETAINING RINGS			
E		retaining ring	
G		grip-type retaining ring

SUPPLEMENT

File this supplement with the service manual.

No. 1
February, 1983

CHANGED PORTION

- Addition of the record head azimuth adjustment.
- Modification of a part of the schematic diagram and the mounting diagram, due to the Dolby C Level Adjustment addition.

[Changed Parts List]

Ref. No.	Part No.	Description	
R165	1-214-964-00	METAL 1M 1% 1/4W	added
R265	1-214-964-00	METAL 1M 1% 1/4W	added
R3006	1-214-964-00	METAL 1M 1% 1/4W	added
R4006	1-214-946-00	METAL 1M 1% 1/4W	added
D701	8-719-902-33	DIODE SLR-34UR5	changed

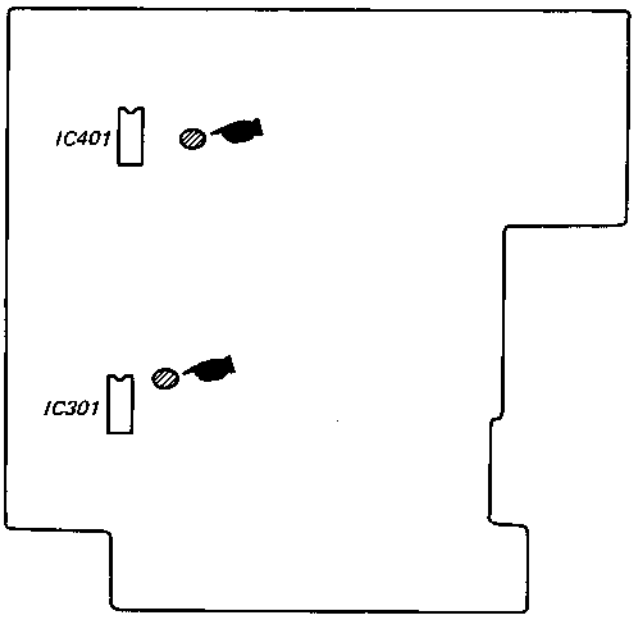
[RECORD BOARD]



SAFETY CHECK-OUT (US Model)

After correcting the original service problem, perform the following safety check before releasing the set to the customer:
Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microampers). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2V AC range are suitable. (See Fig. A)

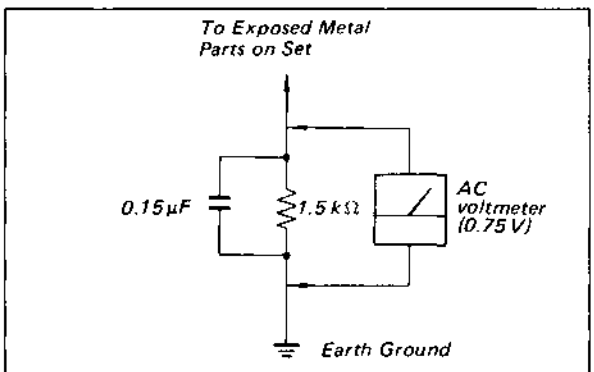


Fig. A. Using an AC voltmeter to check AC leakage.

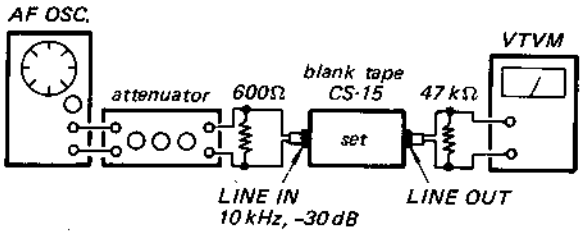
Record Head Azimuth Adjustment (Record head azimuth adjustment should be made later than playback head azimuth adjustment.)

Setting:

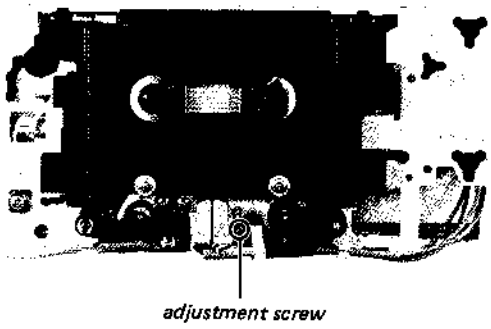
MONITOR: TAPE
REC LEVEL control: standard record
TAPE: TYPE I

Procedure:

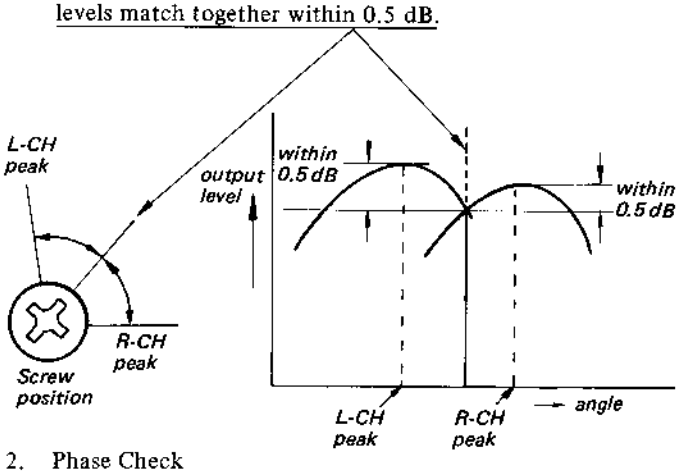
record and playback mode



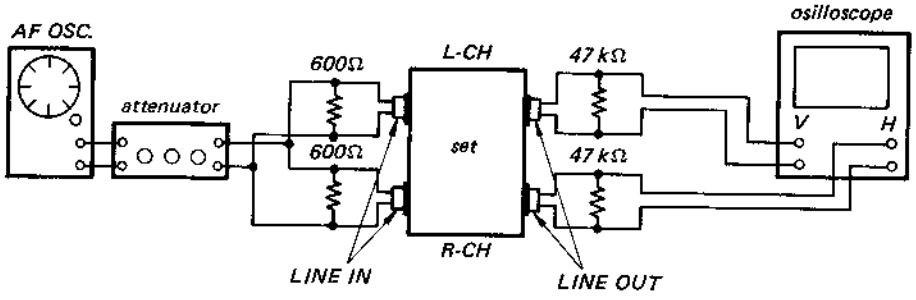
Adjustment Location:

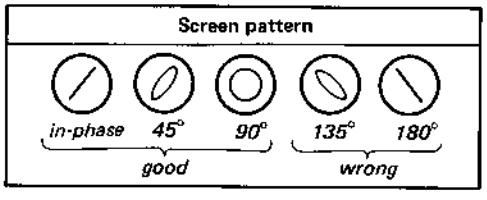


1. Turn the adjustment screw for the maximum output levels. If these levels do not match, turn the adjustment screw until both of output levels match together within 0.5 dB.



2. Phase Check





Adjust the screw so that L-CH and R-CH are in phase.

Specification:

Phase difference between L-CH and R-CH:
less than 90°
Level difference between L-CH and R-CH:
less than 1 dB

DOLBY C Level Adjustment

Setting:

MONITOR: TAPE
TAPE: TYPE I

1. Set DOLBY switch to DOLBY C.
   Adjust for obtaining the specification.

Specification:

- LINE OUT level: −25 dB ± 2 dB
- Level difference between L-CH and R-CH: less than 2 dB

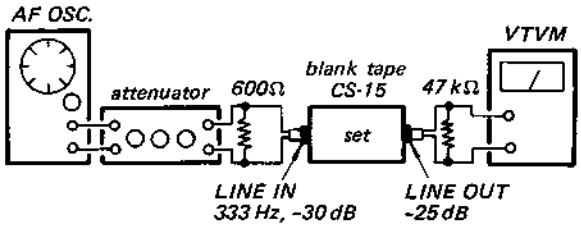
Adjustment Location:

– playback board –

If LINE OUT level is higher than the specification, unsolder the portion marked by ❶ (L-CH), ❷ (R-CH).

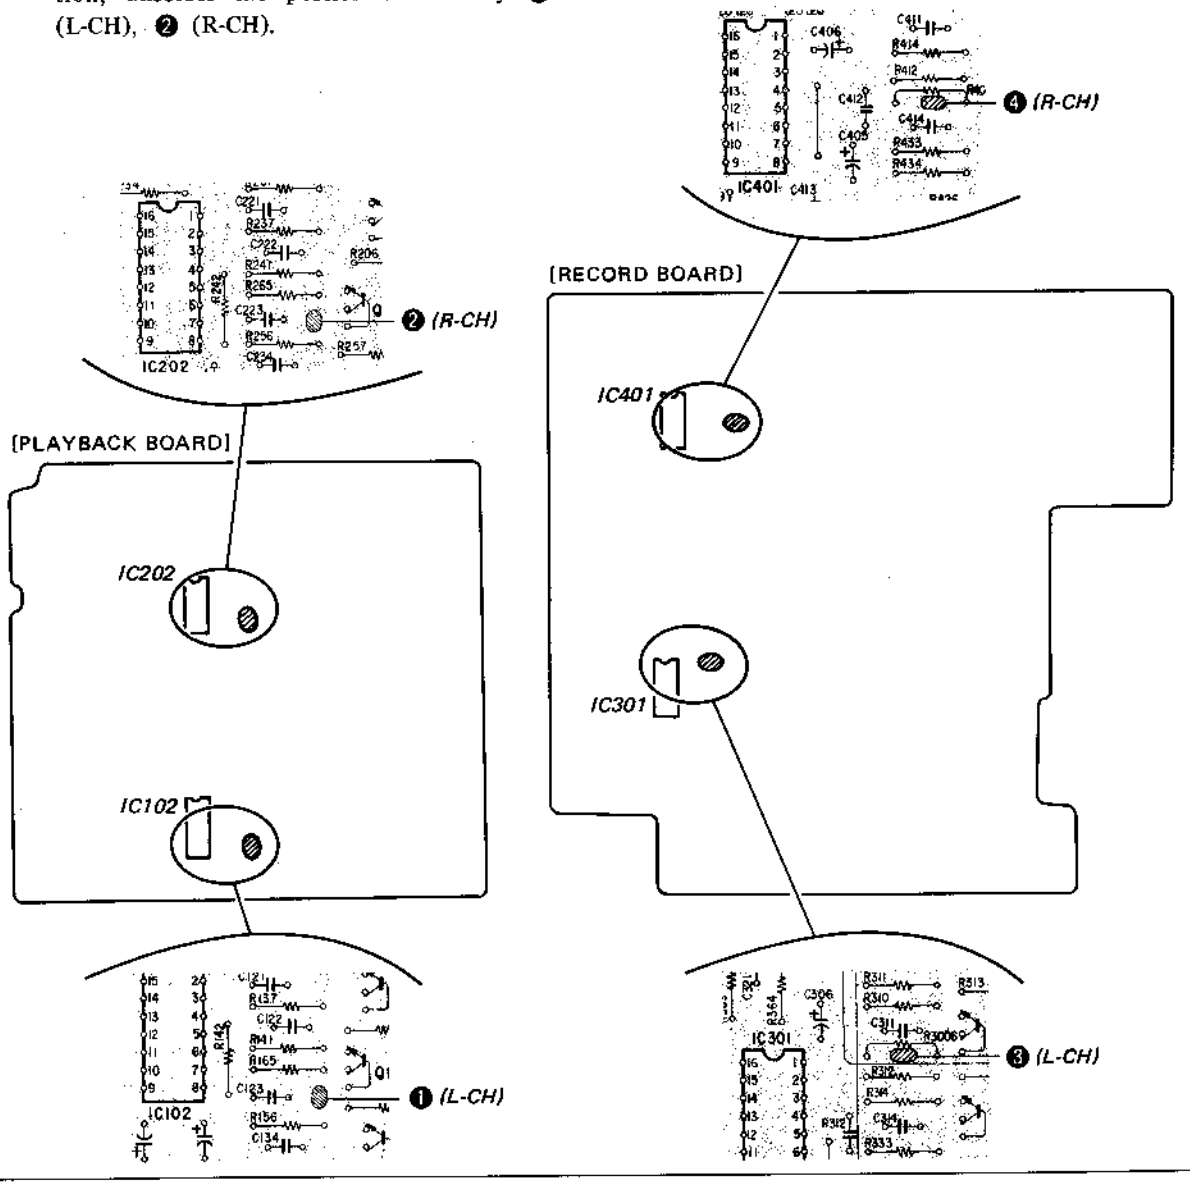
Procedure:

record and playback mode



– record board –

If LINE OUT level is lower than the specification, unsolder the portion marked by ❸ (L-CH), ❹ (R-CH).



MOUNTING DIAGRAM

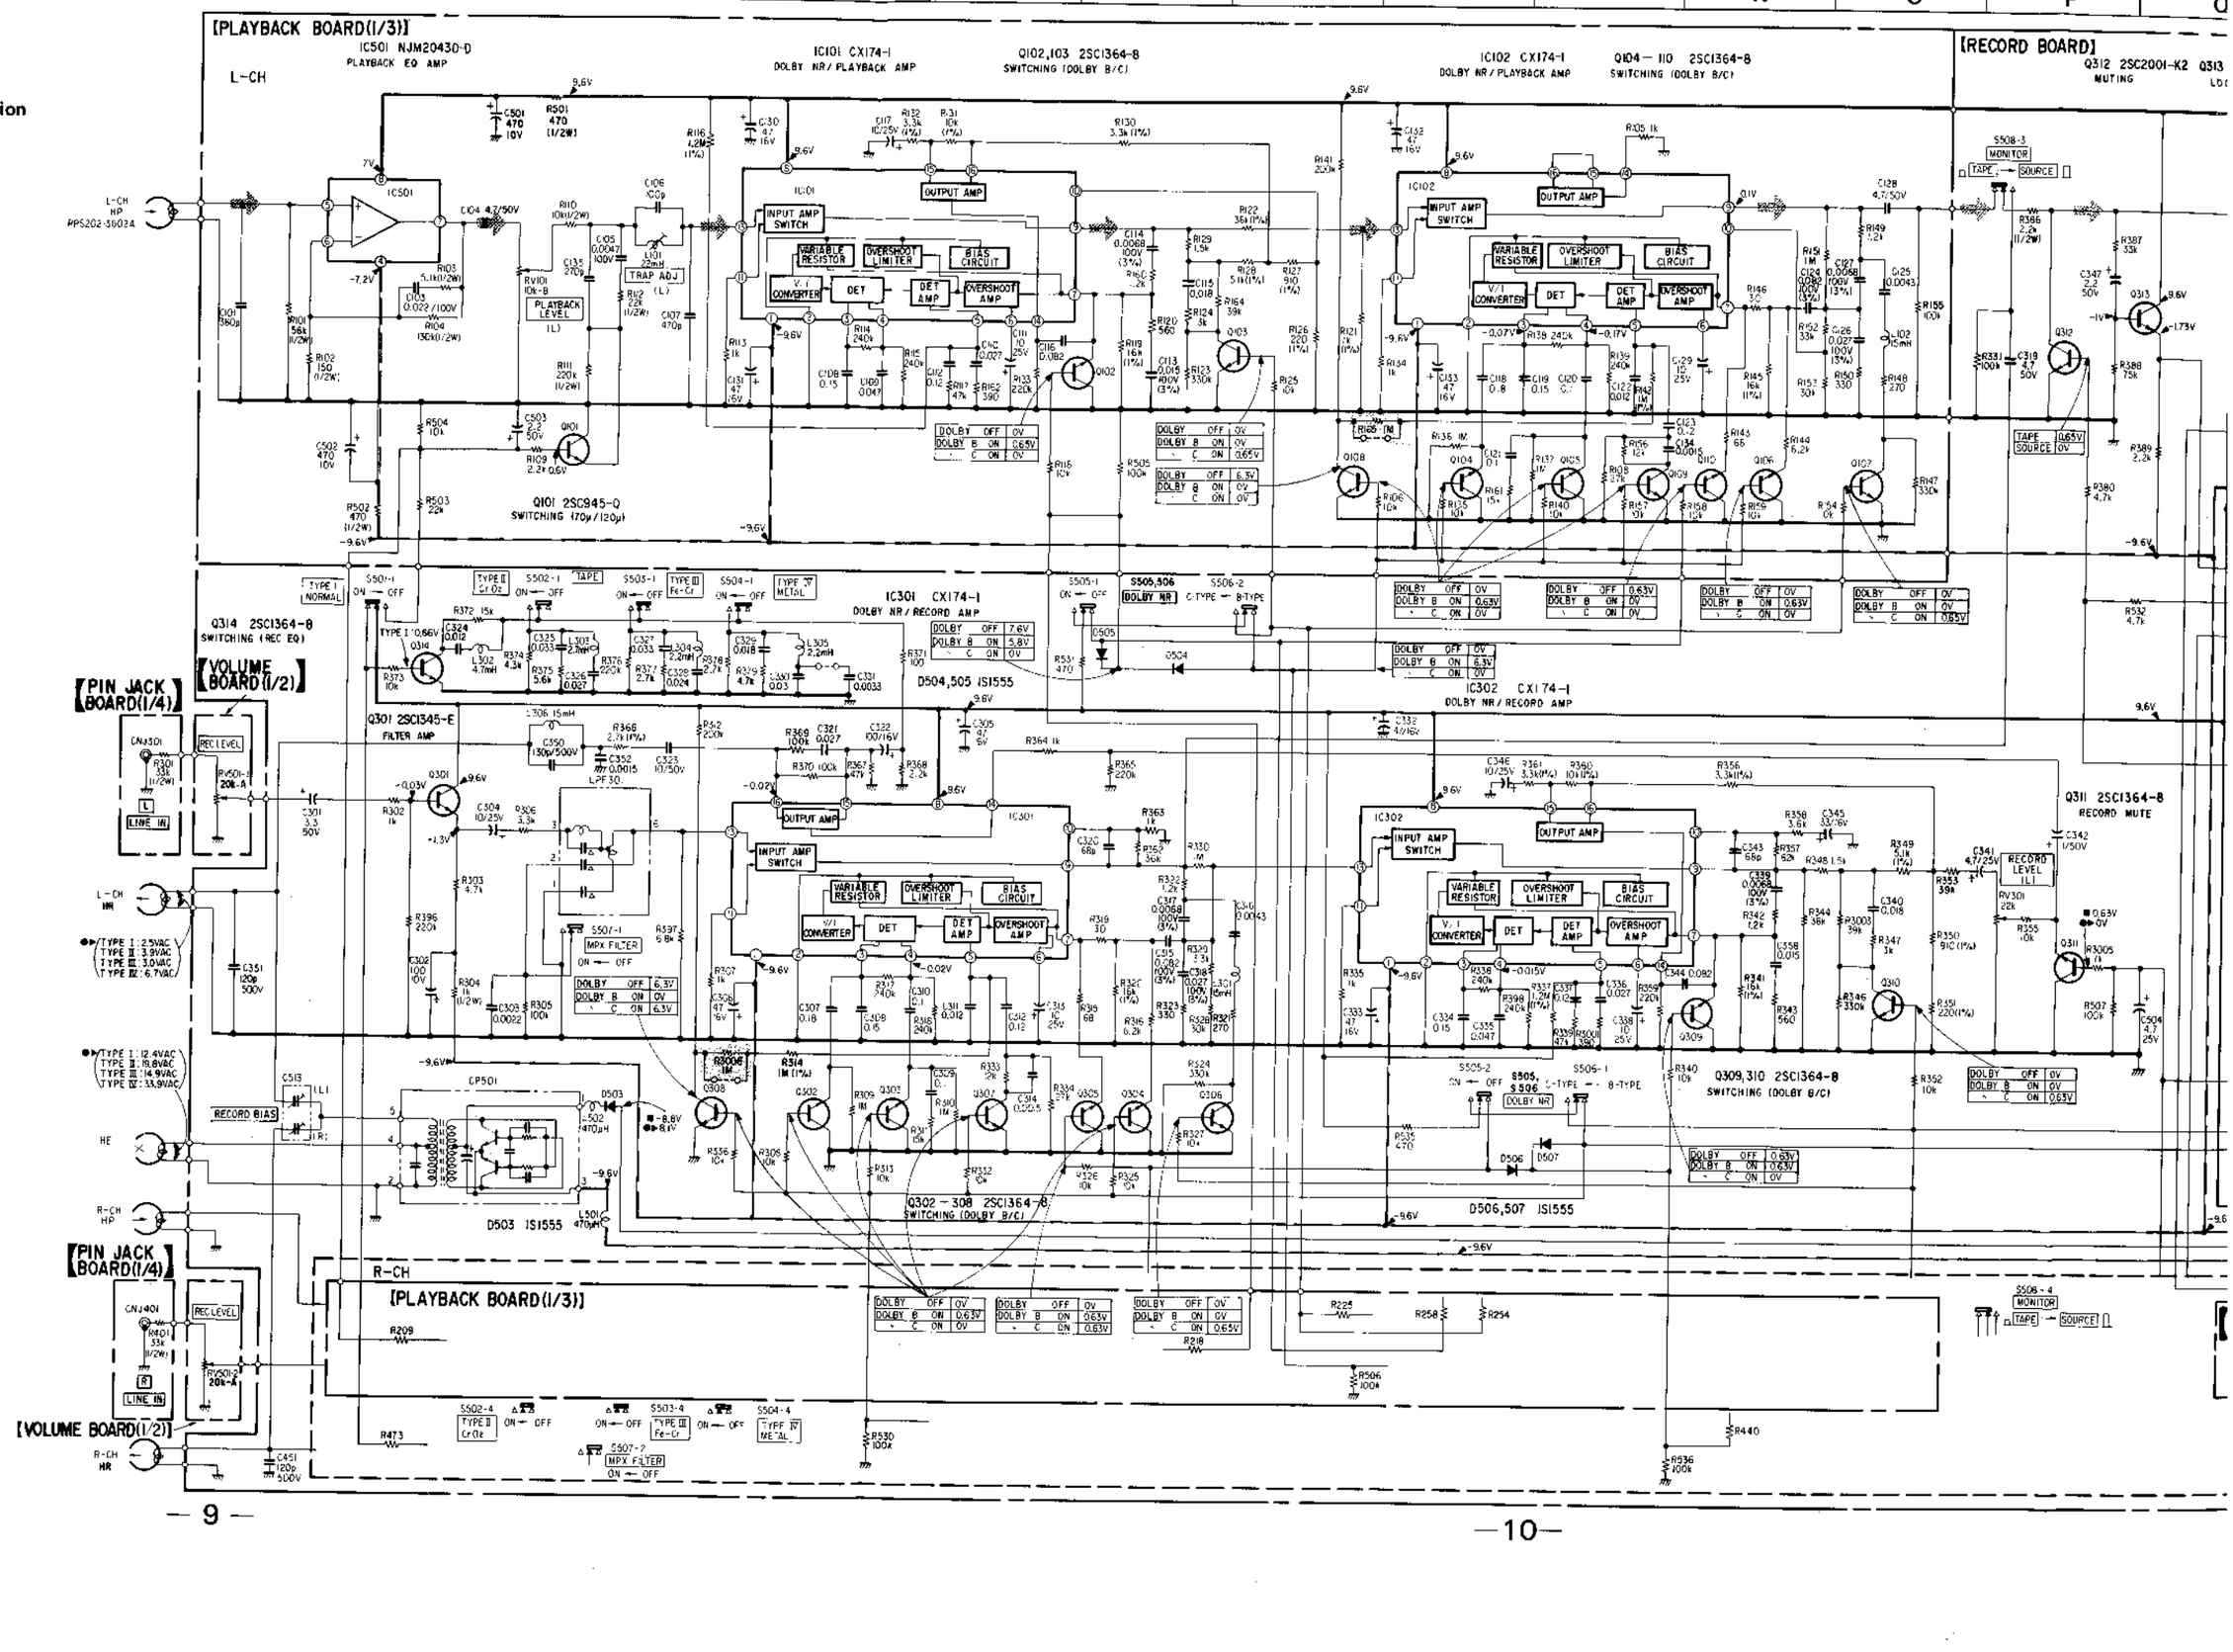
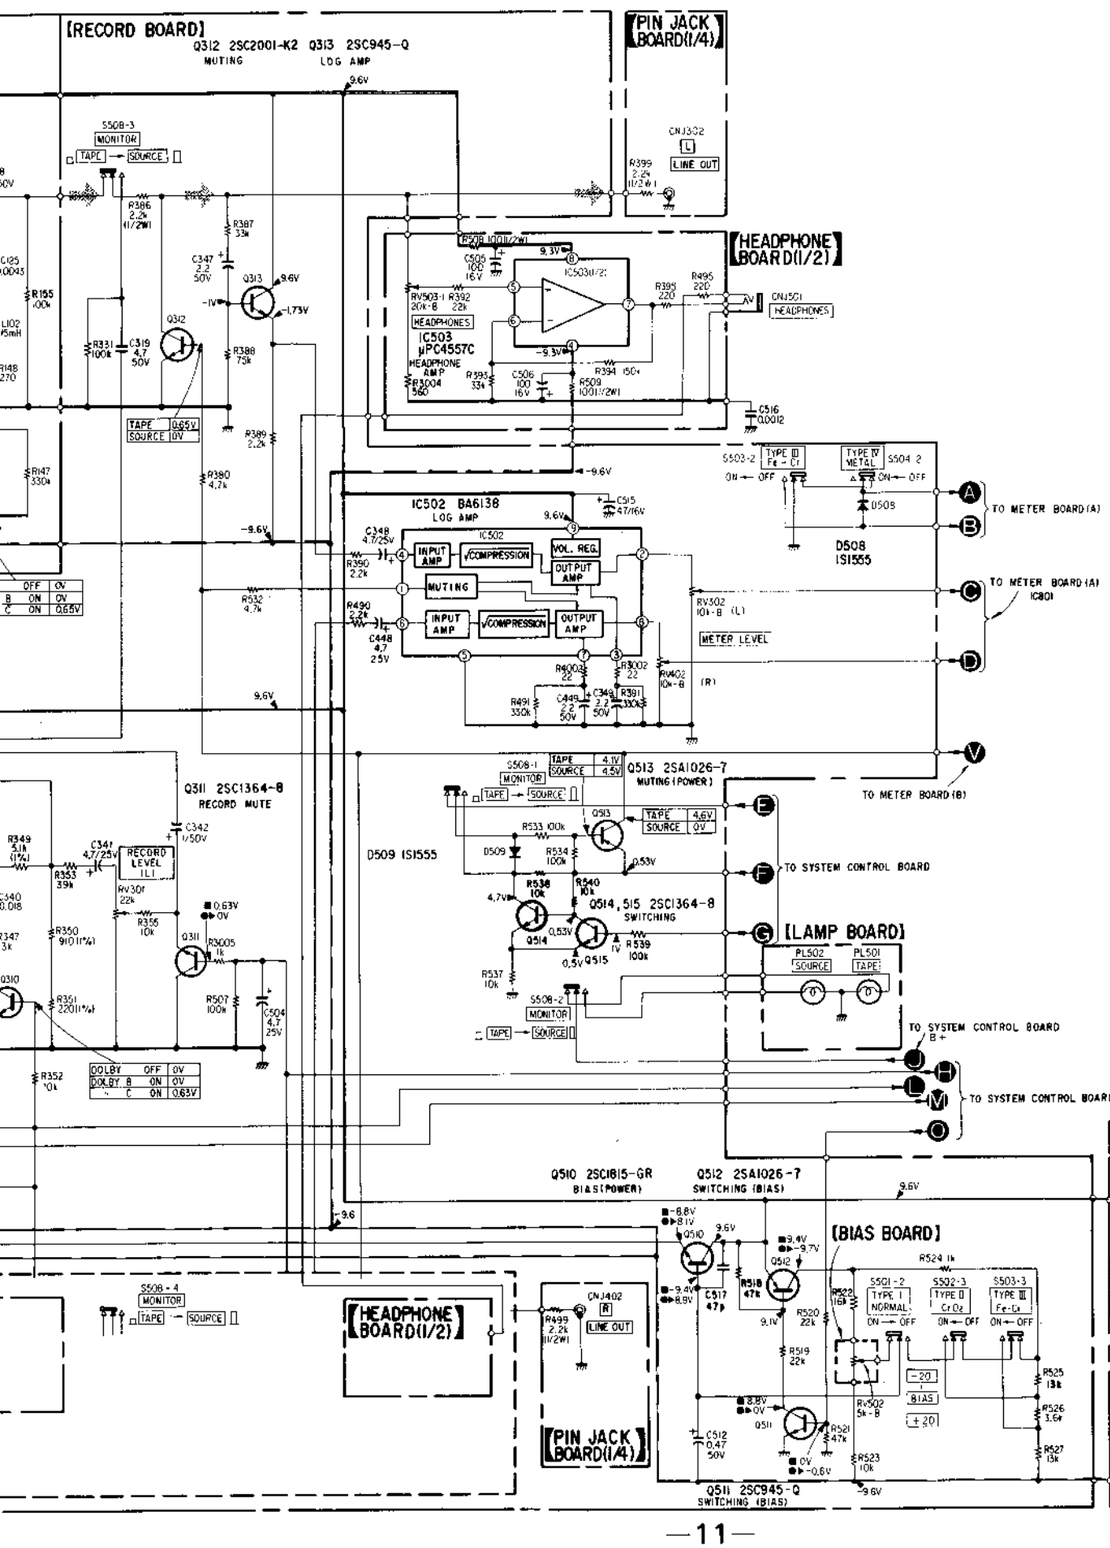
SCHEMATIC DIAGRAM

— Amp Section —

XXXXX --- changed portion





Note:

- ⇒ : signal path
- All capacitors are in μF unless otherwise noted. pF: μμF 50WV or less are not indicated except for electrolytics and tantalums.
- All resistors are in ohms, ¼W unlessotherwise noted. kΩ: 1000Ω, MΩ: 1000kΩ
- ▭ : panel designation.
- ▭ : adjustment for repair.
- ——: B + bus.
- – – –: B – bus.
- Readings are taken under no-signal conditions.with a VOM (50kΩ/V).
- AC voltage readings in the bias oscillator with a VTVM.

Note: Voltages are measured with a VOM (50kΩ/V).

Note: The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

Note: Les composants identifiés par une trame et une marque ⚠ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

SONY WEGA

WERKSTATT-INFO

Produktart:	Modell:	Name:
HIFI	TC-K555ESII	WE/kr. 11 '84

Die Rec/Pb-Köpfe der Modelle TC-K555ES und TC-K555ESII sind **nicht** identisch.

Im TC-K555ESII wird eine Kopfeinheit verwendet, deren Wicklungen aus LC-OFC-Draht bestehen. LC-OFC steht für "**L**inear **C**rystal **O**xygen **F**ree **C**opper", was soviel wie **"linear-kristallines sauerstofffreies Kupfer"** bedeutet. Die Vorteile dieses Materials liegen vor allem in der hohen Leitfähigkeit bei geringster Eigenkapazität.

Irrtümlicherweise wurde im Service-Manual des TC-K555ES/II die ET-Nr. des Tonkopfes falsch angegeben. Ändern Sie bitte die ET-Nr. auf Seite 51 wie folgt:

falsche ET-Nr.	**richtige ET-Nr.**
8-825-500-30	8-825-500-**31**
