STEREO CASSETTE-CORDER

SPECIFICATIONS

Recording system 4-track 2-channel stereo
 Frequency response TYPE I (NORMAL) cassette
 50 – 10,000 Hz
 40 – 12,000 Hz (playback)
 TYPE IV (METAL) cassette
 40 – 13,000 Hz (playback)
 Input Microphone input jack (stereo minijack)
 sensitivity 0.2 mV (–72 dB)
 for low impedance microphone
 Outputs Two headphones jacks (stereo
 minijacks)
 load impedance 32 ohms
 Power output Headphones:
 20 mW + 20 mW (at 10 % harmonic
 distortion)

Power requirements 3 V dc, two batteries size AA (IEC
 designation R6)
 DC IN 3 V jack (optional) EBP-500
 for use on two batteries
 size D (IEC designation R20)
 ac power adaptor (optional)
 See the table on page 2.
 car battery cord (optional)
 DCC-127A for use with 12 V
 car battery

SERVICE MANUAL

Model	Ac power line voltage	Optional ac power adaptor
Japan	100 V ac, 50/60 Hz	AC-39
US and Canada	120 V ac, 60 Hz	AC-39
UK	240 V ac, 50 Hz	AC-37
AEP	220 V ac, 50 Hz	AC-37
E --	100, 120, 220 or 240 V ac, adjustable by Sony personnel), 50/60 Hz	AC-38

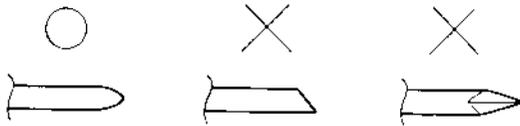

Dimensions Approx. 82 (w) x 137.5 (h) x 38 (d) mm
 including projecting parts and controls

Weight Approx. 380 g
 including batteries

Service Precaution for Flexible Circuit Board

1. Keep the temperature of the soldering iron $270^{\circ}\text{C} \pm 10^{\circ}\text{C}$.

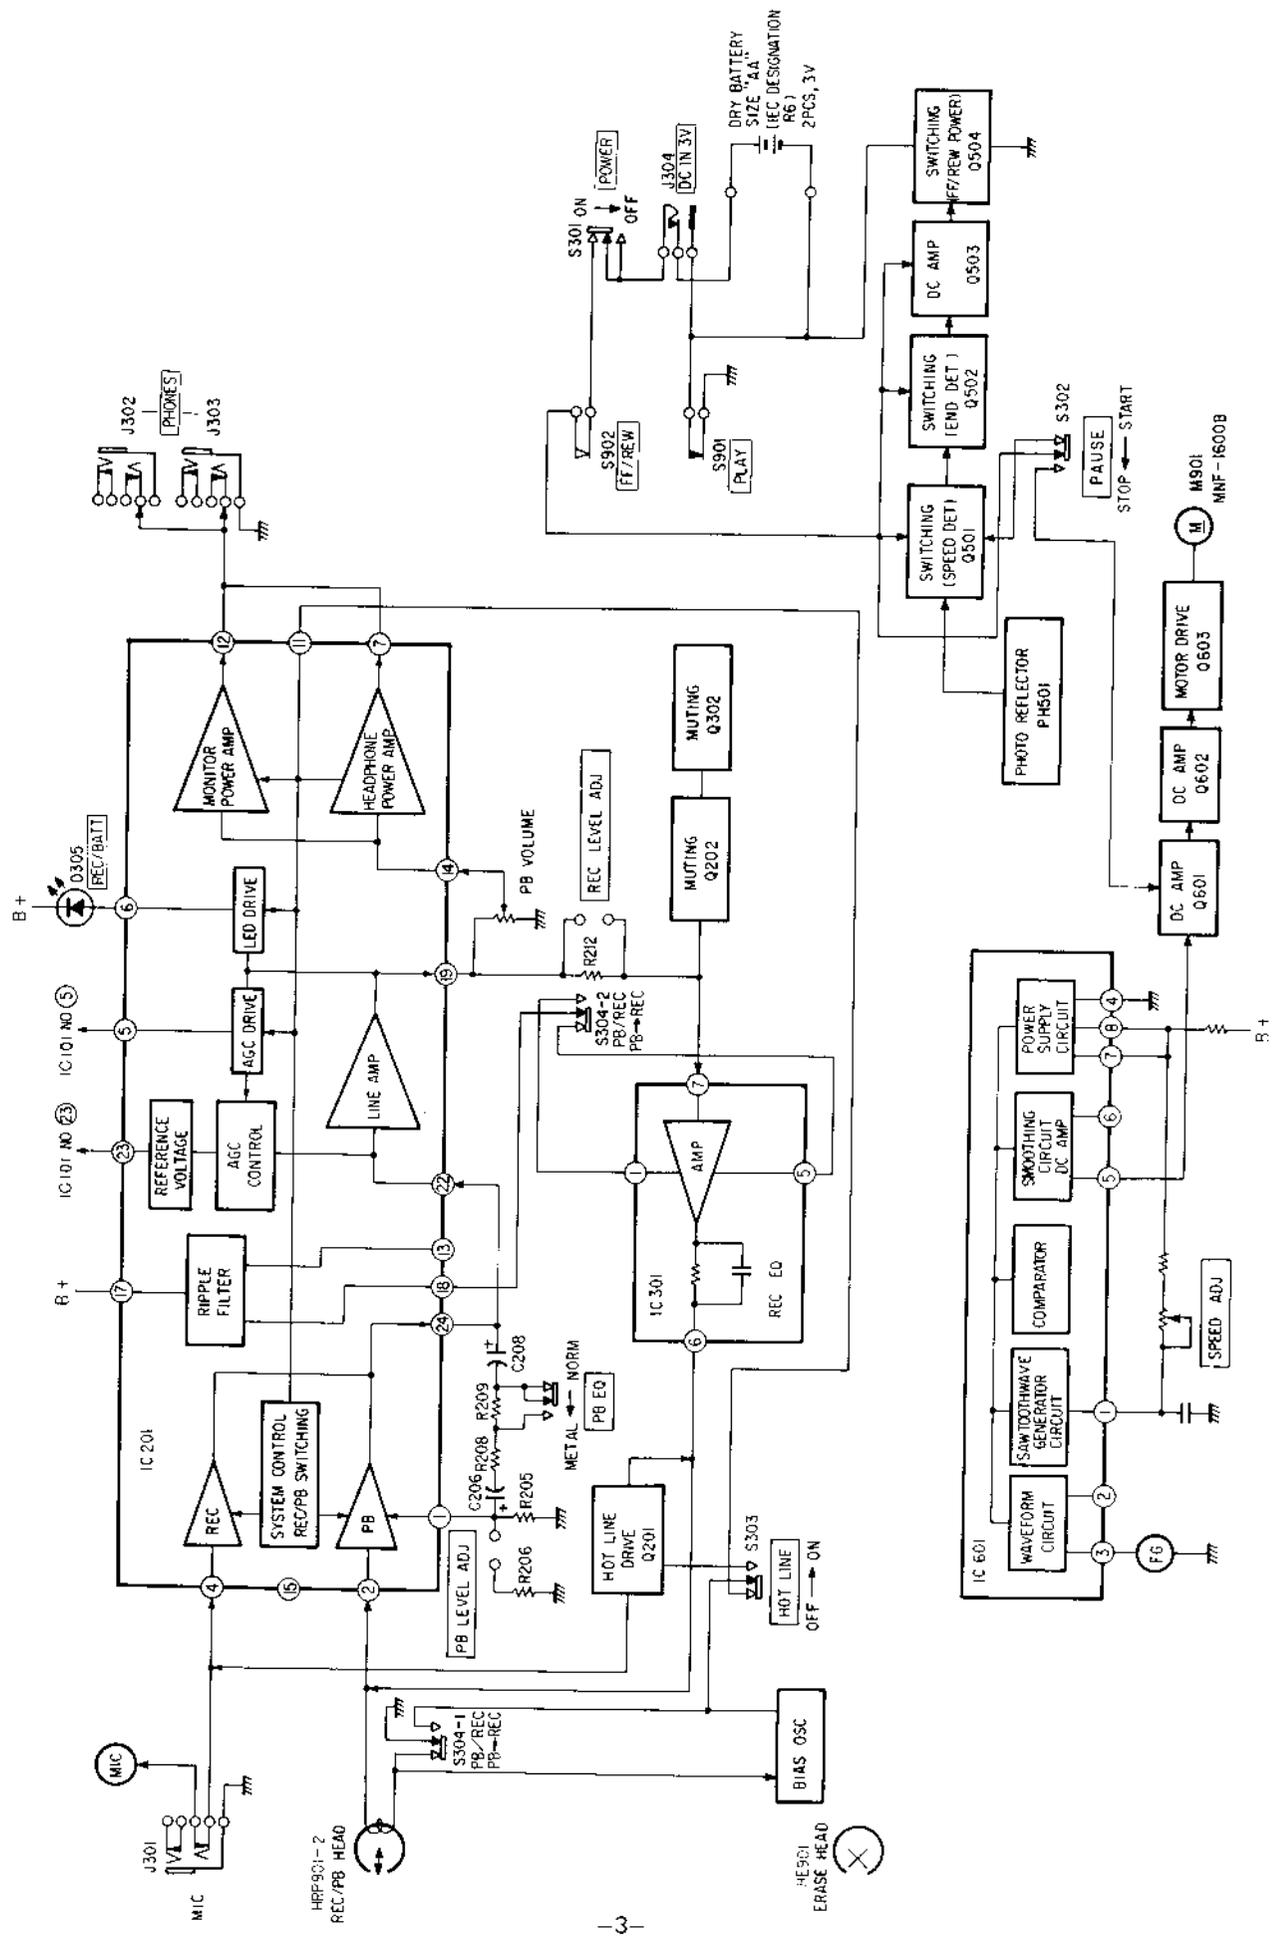

- Shape of the tip of the soldering iron.

2. Do not apply the soldering iron to the pattern more than 5 seconds or 20 times.
3. Do not push the pattern forcefully while the soldering iron is applied to it.
4. Do not bend the flexible printed circuit board.
5. Hold the component side of the printed circuit board.

MECHANISM DESCRIPTION

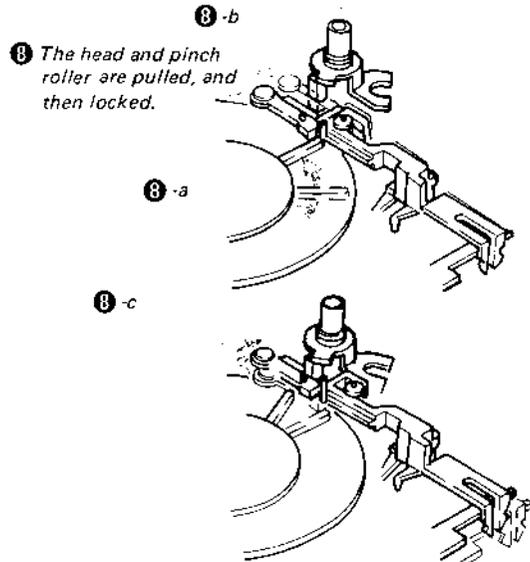

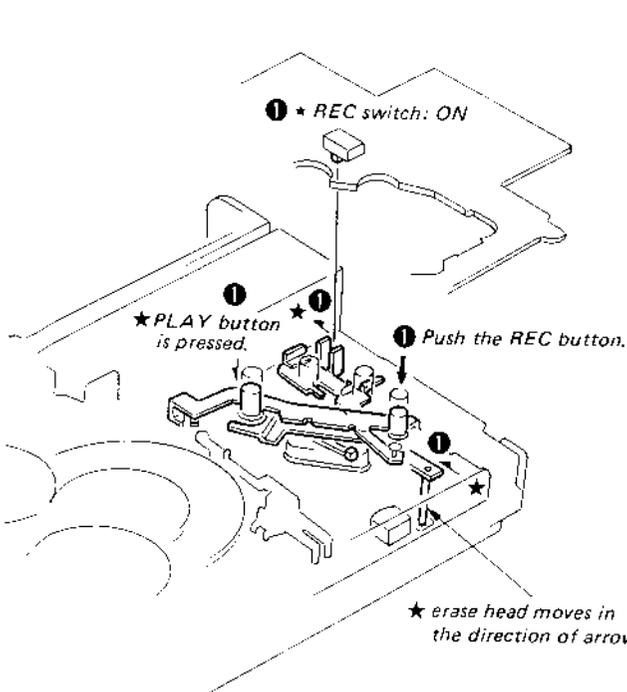

2-1. MECHANISM DESCRIPTION

[PLAY & REC]

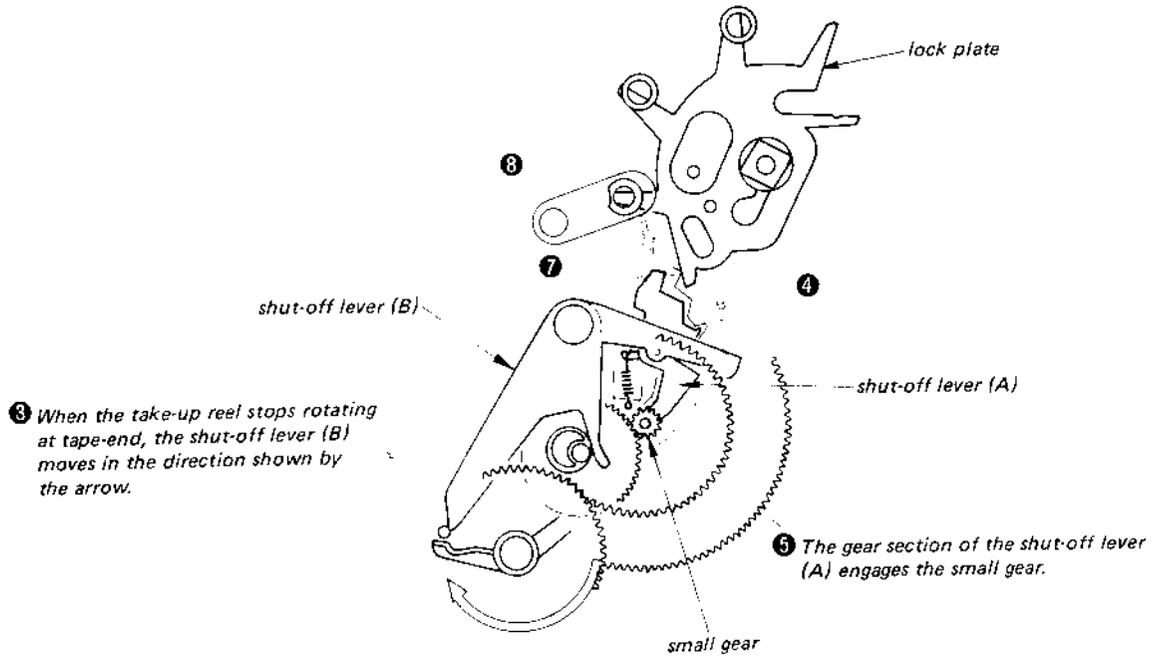

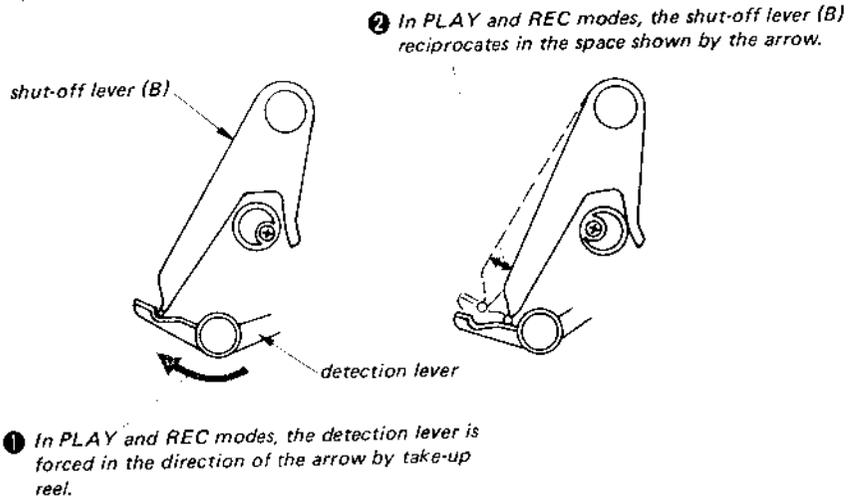

[PLAY]

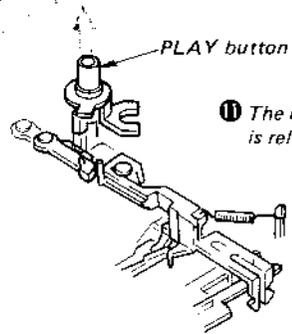

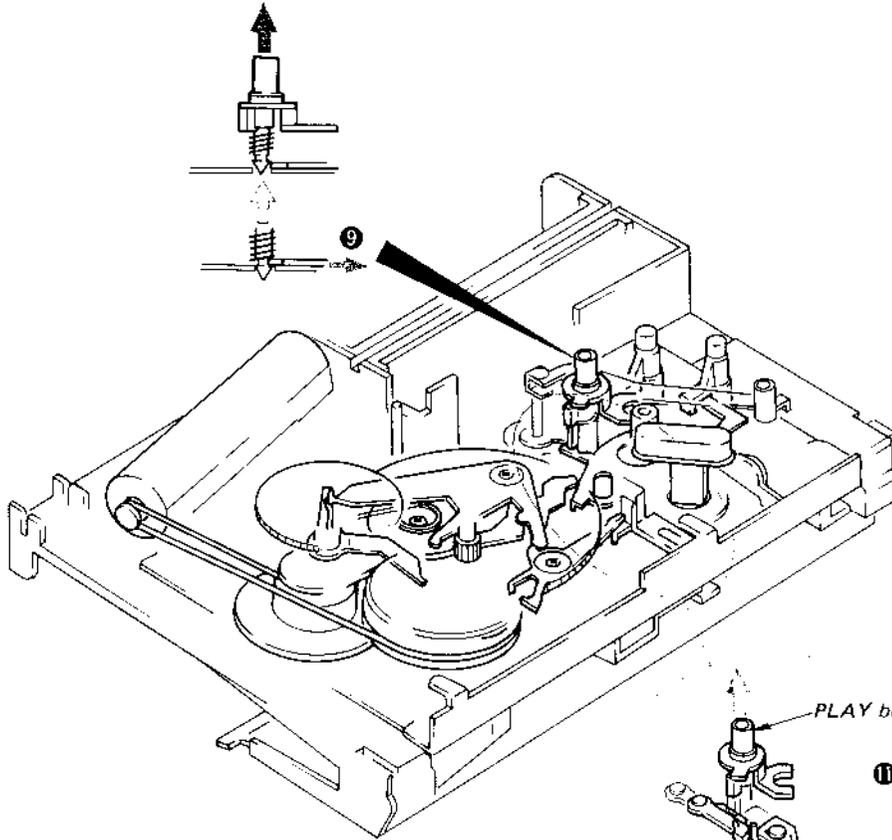

[REC]

[Automatic Shut-off in PLAY and REC modes]

⑩ The PLAY button is released, and the PLAY switch turns off.

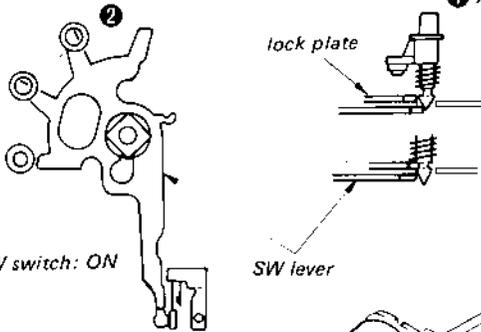

⑪ The PLAY button lock is released.

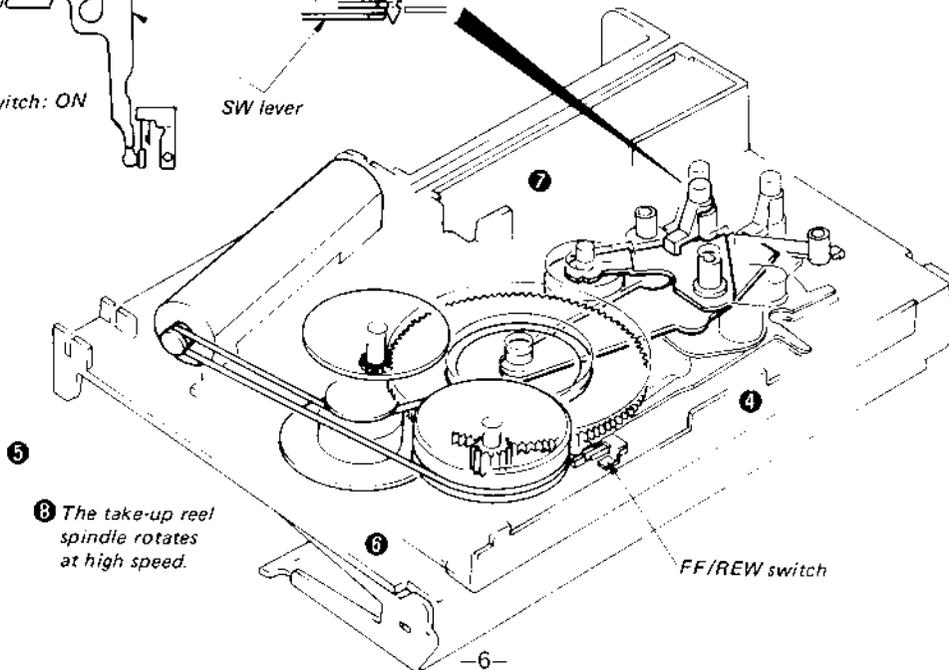

[FF]

⑫ The head and pinch roller move back.

① Push the FF button.

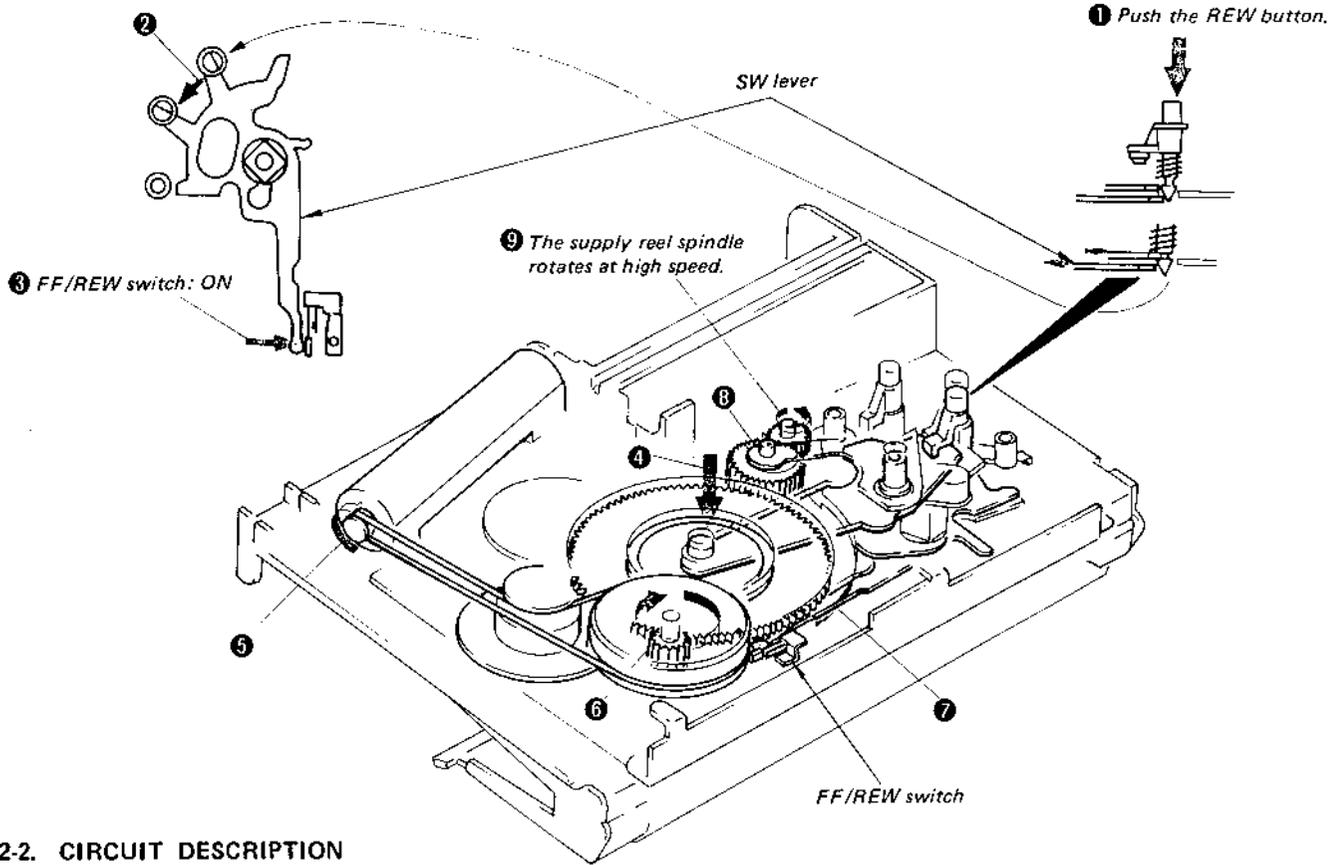

③ FF/REW switch: ON

⑧ The take-up reel spindle rotates at high speed.

[REW]

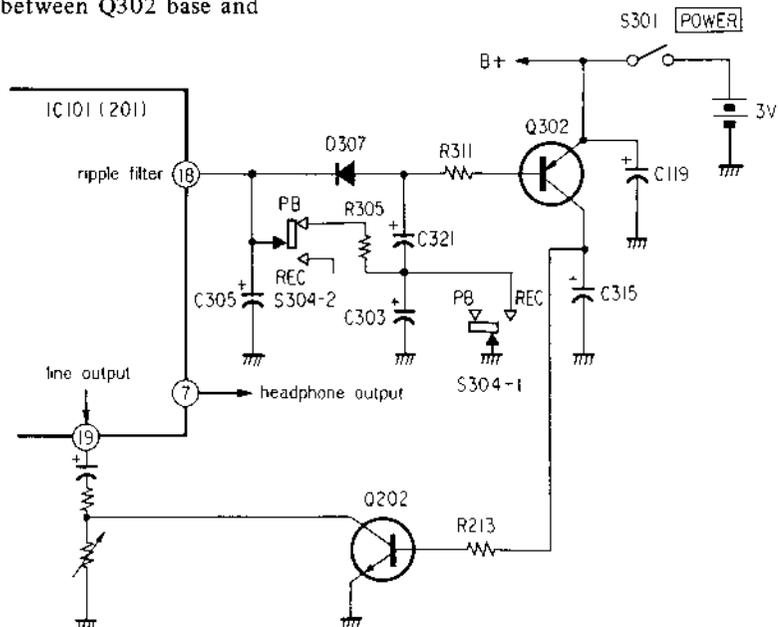

2-2. CIRCUIT DESCRIPTION

Line Muting Circuit

Q302 and Q202 are a muting circuit to remove noise generated when the power switch is turned on or when switching from PLAY mode to REC mode. Because Q302 base voltage is low, when the power switch is turned on, Q302 goes on and Q202 goes on. Therefore, because IC101, IC201 pin (19) is grounded through Q202, the line output is muted. However, the base voltage of Q302 rises with the rise in voltage at IC101, IC201 pin (18) (ripple filter output), and when the voltage difference between Q302 base and

emitter falls below 0.6V, it goes off and muting is released.

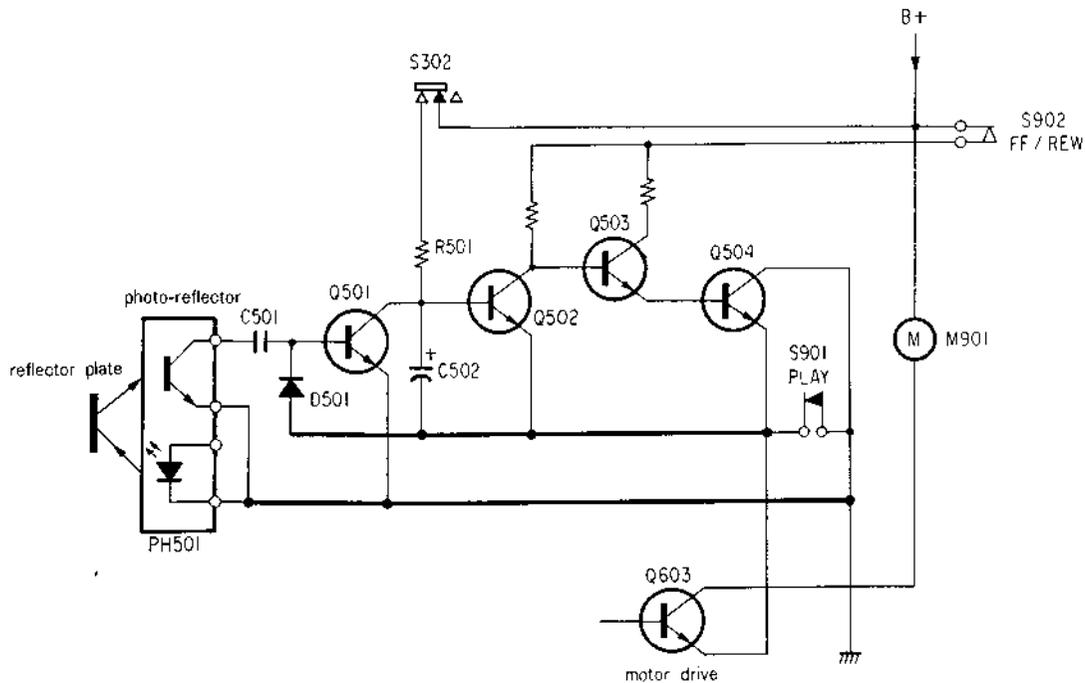

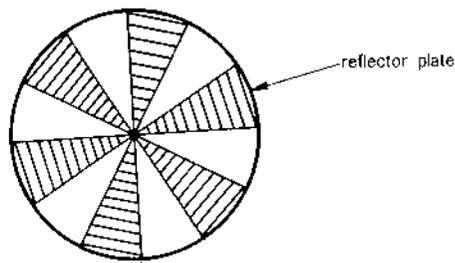

Next, when switching from PLAY to REC mode, Q302 base is grounded through S304-1, so Q302 turns on and muting is applied. When C321 charging is completed, Q302 goes off again. When switching from REC mode back to PLAY, the load charged to C321 is discharged through R305, S304-2 and IC101 (IC201) pin (18).

Auto-Off Circuit

The auto-off circuit consists of four transistors, and operates only during FF or REW mode. A reflector plate is attached to the back of the take-up reel table (see figure below), and while the reel table is rotating, on, off signals are constantly applied to Q501 base via the photo-reflector (PH501) and C501. Therefore, Q501 alternately repeats on, off. D501 is used for C501 discharge. The following is an explanation of FF or REW with the reel table rotating. First, when an on signal is applied to Q501 base via the photo-reflector, Q502 goes off. Therefore, since Q503, Q504 go on, the motor drive transistor Q603 emitter is connected to the ground circuit and the motor continues to rotate.

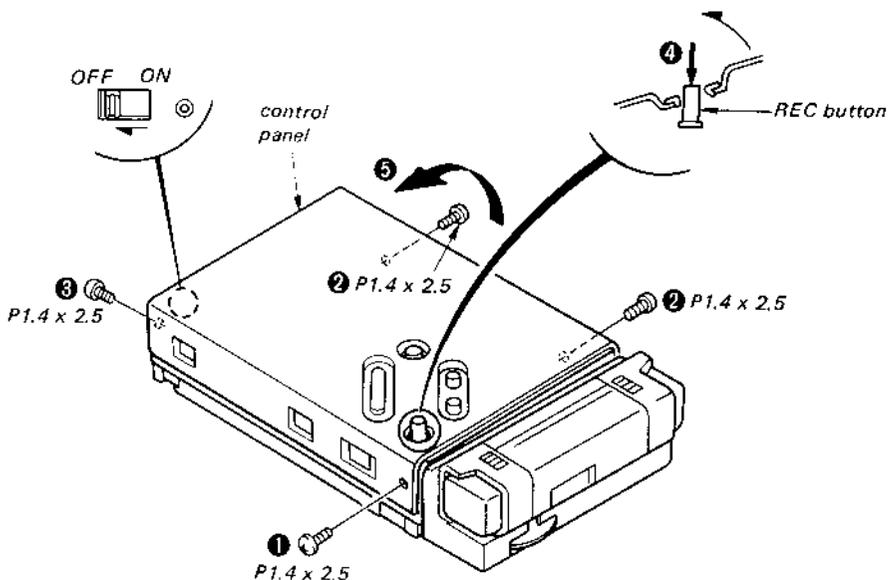

Next, when an off signal is applied to Q501 base, Q501 goes off and Q502 goes on, but because B+ is applied to Q502 base via R501, Q502 stays off until C502 charging is completed. However, before C502 charges, the next on signal is applied to Q501 base, so Q501 goes on, and C502 is discharged through Q501. Therefore, while the take-up reel table is rotating, Q504 is on and the motor rotates. Next, at tape end, when the on, off signals are no longer applied to Q501, it goes off, and C502 charging is completed through R501. When the voltage across C502 goes above about 0.6V, Q502 goes on, Q503, 504 go off and motor rotation stops.

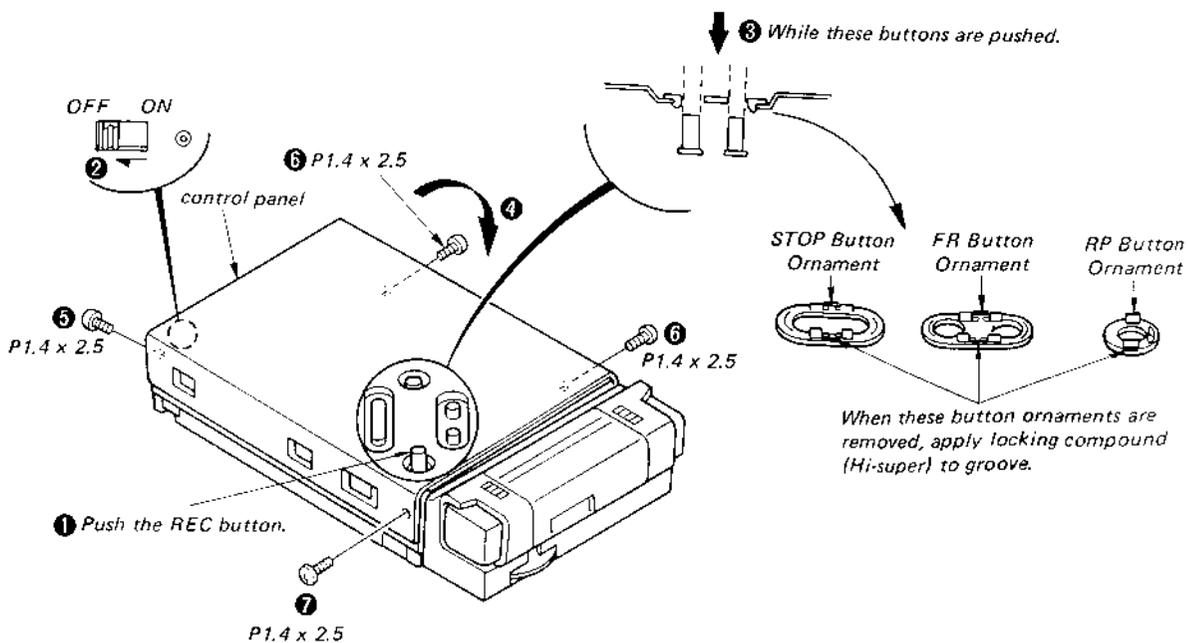

SECTION 3 DISASSEMBLY

Note: Follow the disassembly procedure in the numerical order given.

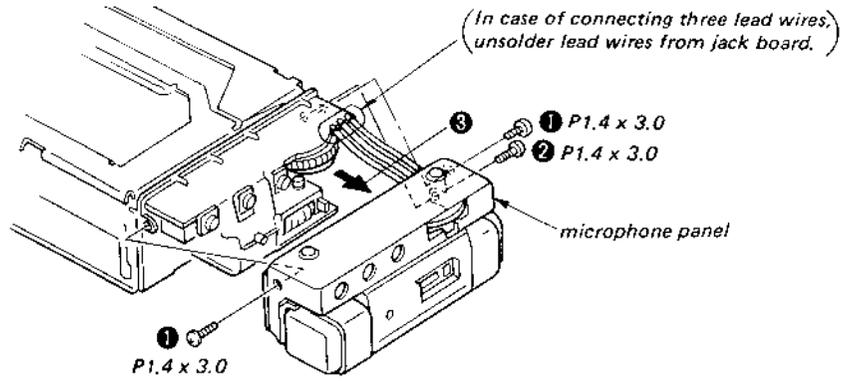

CONTROL PANEL REMOVAL

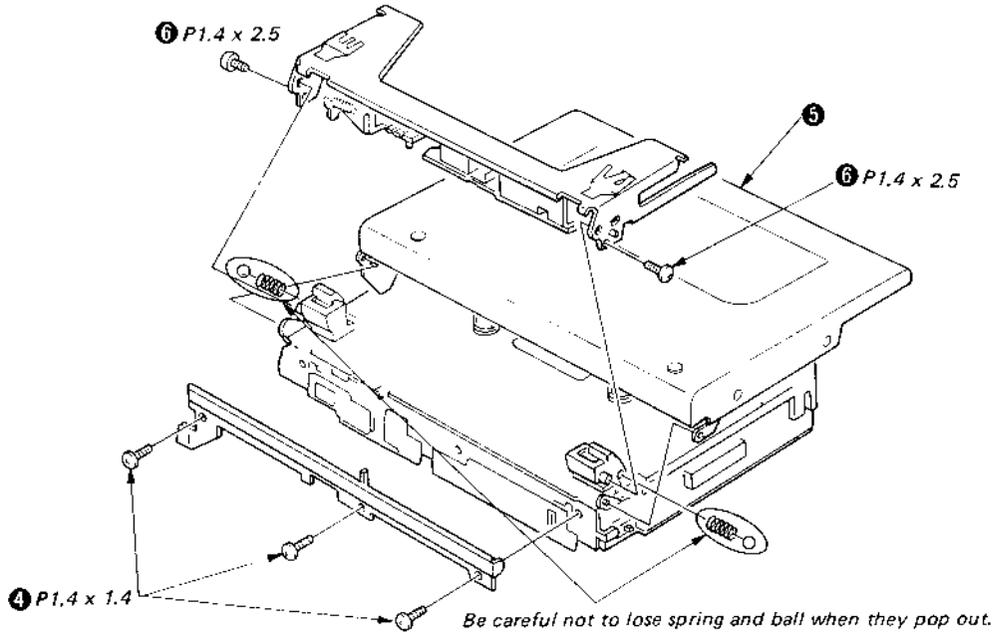

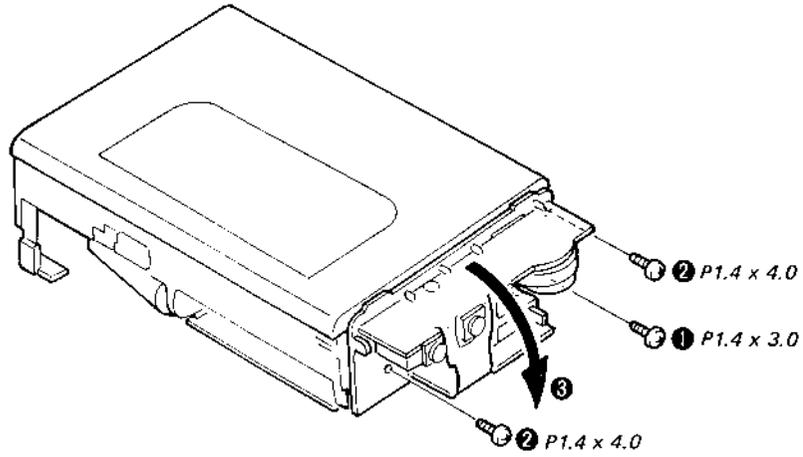

CONTROL PANEL INSTALLATION

MICROPHONE PANEL REMOVAL

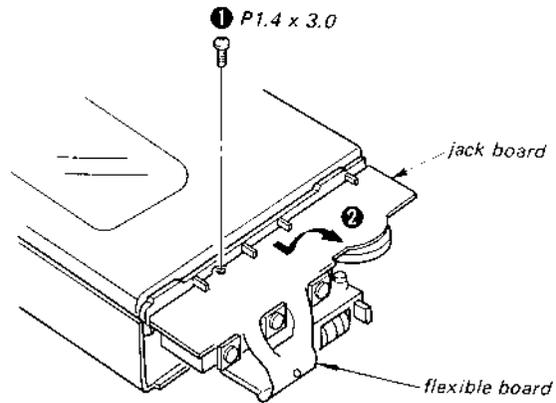

CASSETTE HOLDER REMOVAL

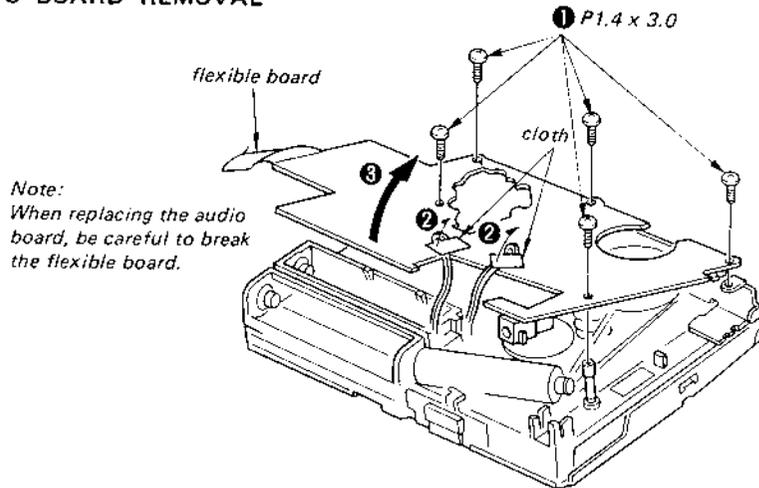

Pinch roller and head can be replaced.

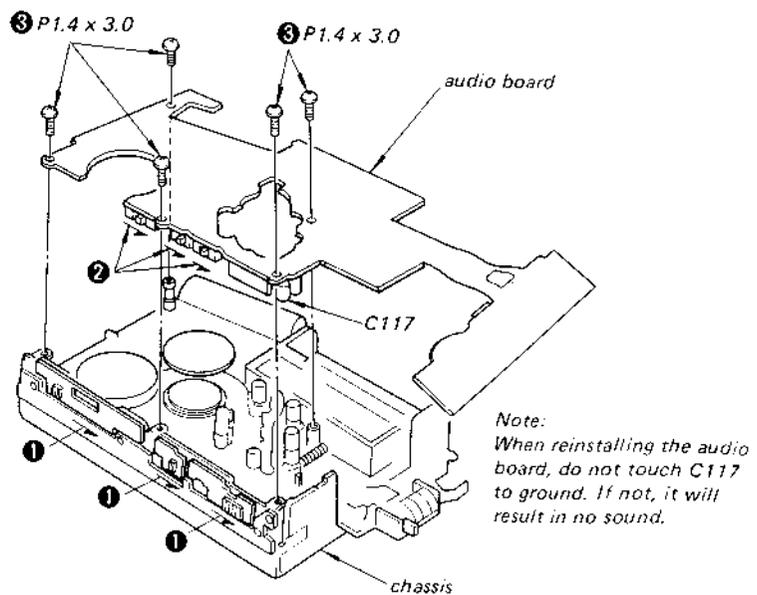

JACK BOARD REMOVAL

AUDIO BOARD REMOVAL

AUDIO BOARD INSTALLATION

SECTION 4 ADJUSTMENTS

PRECAUTION

1. Clean the following parts with a denatured-alcohol-moistened swab:

playback head	pinch roller
capstan	rubber belts
	erase head
2. Demagnetize the record/playback head with a head demagnetizer.
3. Do not use a magnetized screwdriver for the adjustments.
4. After the adjustments, apply suitable locking compound to the parts adjusted.
5. The adjustments should be performed with the rated power supply voltage unless otherwise noted.

4-1. MECHANICAL ADJUSTMENTS

Torque Measurement
Perform with 2.5V DC power.

	Torque meter	Meter reading
PLAY	CQ-120C	25 - 50g-cm
FF, REW	CQ-201B	More than 65g-cm
Back Tension	CQ-102C	Less than 5g-cm
Tape Pulling Force	CQ-403	More than 80g

Pinch Roller Pressure Adjustment
— Playback Mode —

1. Pull the spring scale in the direction shown by the arrow.
2. Slowly return the pinch roller and read the spring scale just when the pinch roller starts rotating.

Specification:
170 ± 20 g (5.3 - 6.7 oz)

4-2. ELECTRICAL ADJUSTMENTS

Note: The adjustment should be performed in the order given in this service manual. The adjustments should be performed for both L-CH and R-CH.

• Standard Record:

Standard Input Level

INPUT	MIC
source impedance	300Ω
input level	0.77mV (-60dB)

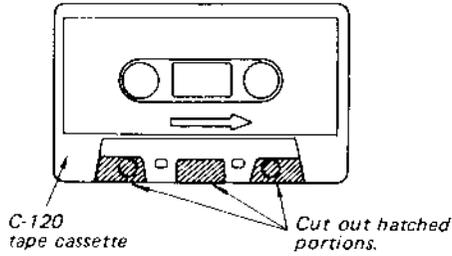

Standard output Level

OUTPUT	HEADPHONES
load impedance	32Ω
output level	*0.245V (-10dB)

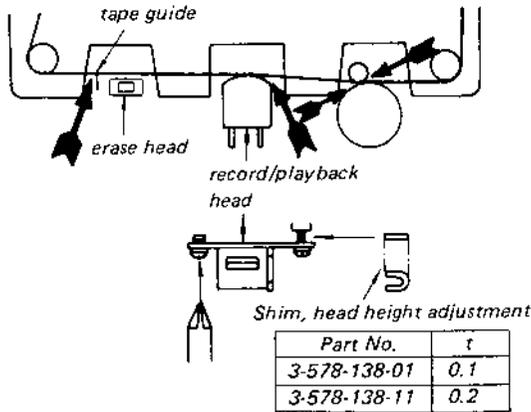

* Adjust by volume control.

Head Height Adjustment

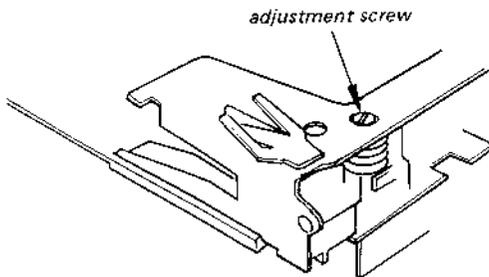

1. Prepare an adjustment cassette as shown below.

2. In playback mode and viewing from the front, adjust the head heights to eliminate tape curl and tape twist at portions of arrow.

3. If necessary, adjust the height of the tape-guide by turning the adjustment screw.

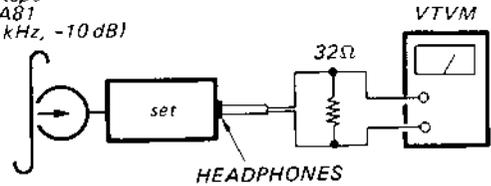

4. Apply locking compound on adjustment screw.

Record/playback Head Azimuth Adjustment

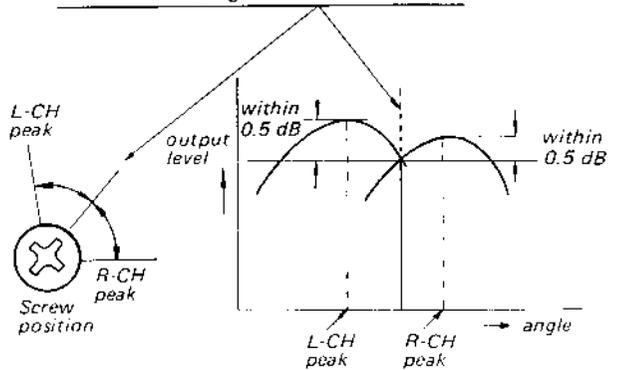

Procedure:

1. Mode: playback

test tape
P-4-A81
(6.3 kHz, -10 dB)

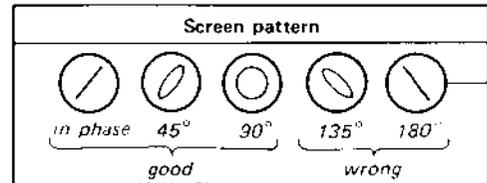

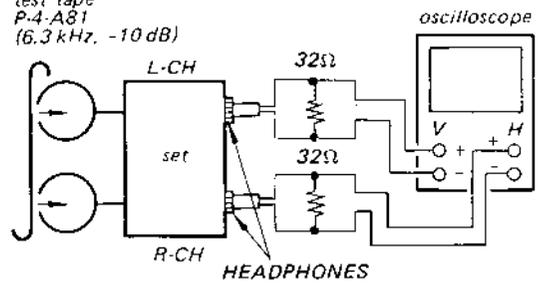

2. Turn the adjustment screw for the maximum output levels. If these levels do not match, turn the adjustment screw until both of output levels match together within 0.5 dB.

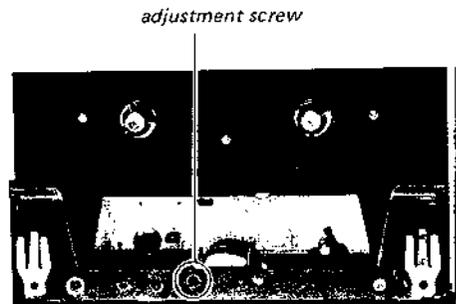

3. Phase Check
Mode: playback

test tape
P-4-A81
(6.3 kHz, -10 dB)

Adjustment Location:

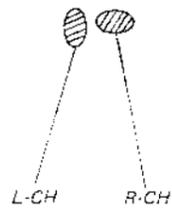

WM-R2 WM-R2

Microphone Sensitivity Adjustment

When replacing the microphone, perform this adjustment.

Mark of Microphone	Pattern Connection

or
digital frequency
counter

Specifications:

Speed checker	Digital frequency counter
$\pm 0.5\%$	2,985 - 3,015Hz

Frequency difference between the beginning and the end of the tape should be within $\pm 0.5\%$ ($\pm 15\text{Hz}$).

RV601

Playback Level Adjustment

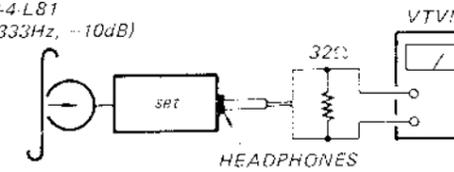

Setting:

VOLUME control: maximum

Procedure:

Mode: playback

test tape
P-4-L81
(333Hz, -10dB)

Specification:

Level difference between channels: within 2.5dB

- 1) If necessary, connect the patterns for lower level channel.
- 2) Confirm that the output level of HEADPHONES is not changed when repeating playback and stop.

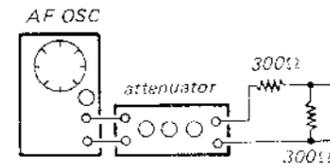

Adjustment Location:

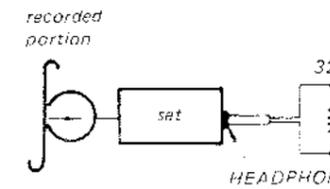

Record Bias Adjustment

Procedure:

1. Mode: record

2. Mode: playback

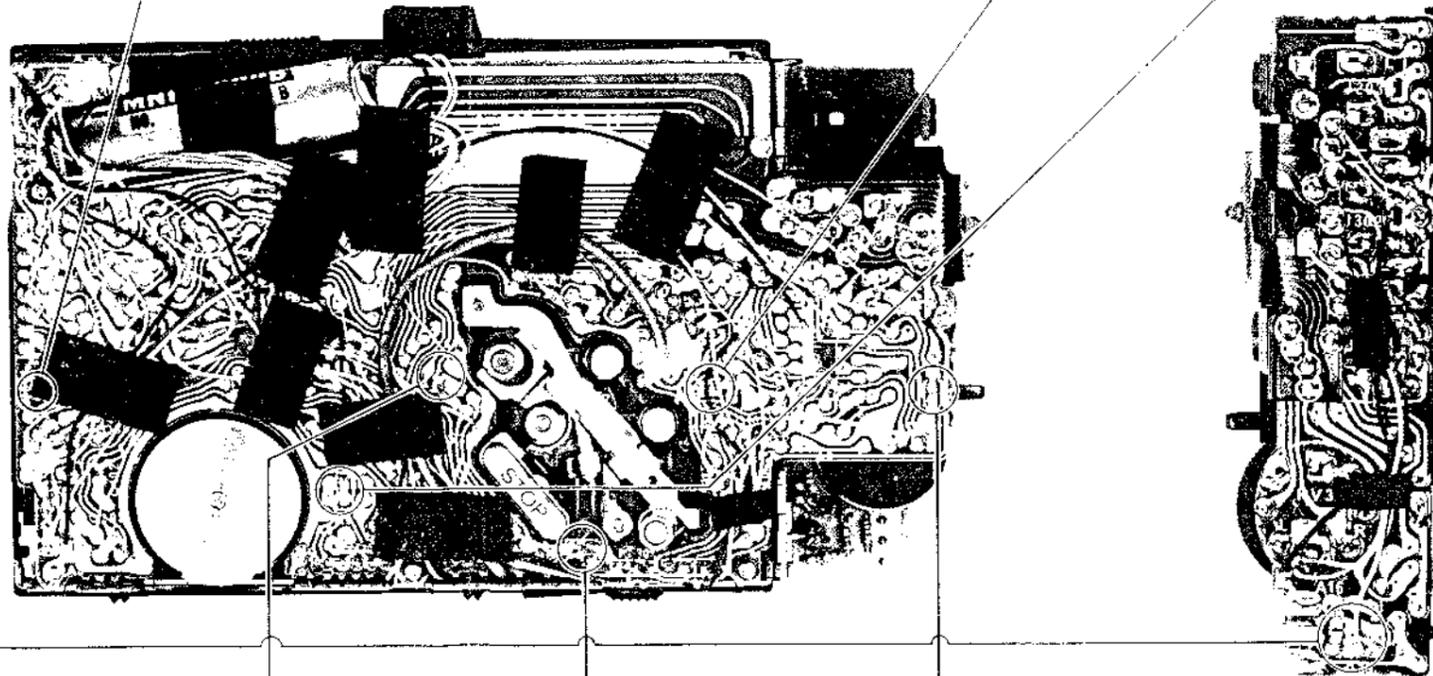

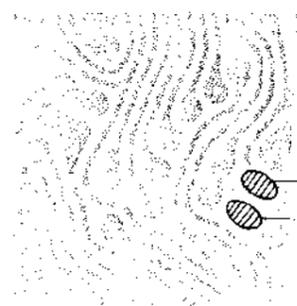

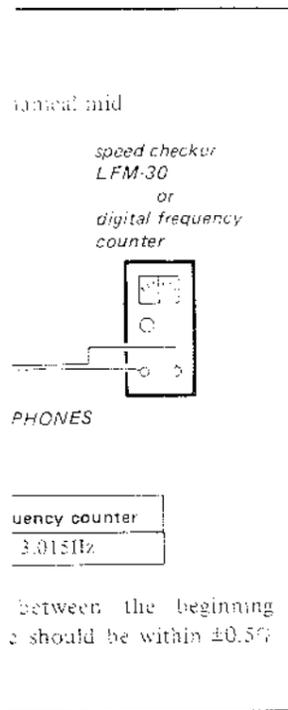

- 1) Adjust VOLUME control so level is 77.5mV (-20dB)
- 2) Confirm that 200Hz and 600Hz are $0 \pm 3\text{dB}$, $-3 \pm 3\text{dB}$, respectively.
- 3) If necessary, change bias pattern; repeat steps 1), 2).

HARDWARE NOMENCLATURE

Screw:

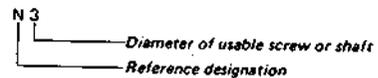

Indicated slotted-head only.

Unless otherwise indicated, it means cross-recessed head (Phillips type).

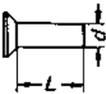

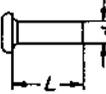

Nut, Washer, Retaining ring:

Reference Designation	Shape	Description	Remarks
SCREWS			
P		pan-head screw	binding-head (B) screw for replacement
PWH		pan-head screw with washer face	binding-head (B) screw and flat washer for replacement
PS PSP		pan-head screw with spring washer	binding-head (B) screw and spring washer for replacement
PSW PSPW		pan-head screw with spring and flat washers	binding-head (B) screw and spring and flat washers for replacement
R		round-head screw	binding-head (B) screw for replacement
K		flat-countersunk-head screw	
RK		oval-countersunk-head screw	
B		binding-head screw	
T		truss-head screw	binding-head (B) screw for replacement
F		flat-filister-head screw	
RF		filister-head screw	
BV		brazier-head screw	

Reference Designation	Shape	Description	Remarks
SELF-TAPPING SCREWS			
TA		self-tapping screw	ex: TA, P 3 x 10
PTP		pan-head self-tapping screw	binding-head self-tapping (TA, B) screw for replacement
PTPWH		pan-head self-tapping screw with washer face	binding-head self-tapping (TA, B) screw and flat washer for replacement
PTTWH		pan-head thread-rolling screw with washer face	binding-head (B) screw and flat washer for replacement
SET SCREWS			
SC		set screw	
SC		hexagon-socket set screw	ex: SC 2.6 x 4, hexagon socket
NUT			
N		nut	
WASHERS			
W		flat washer	
SW		spring washer	
LW		internal-tooth lock washer	ex: LW3, internal
LW		external-tooth lock washer	ex: LW3, external
RETAINING RINGS			
E		retaining ring	
G		grip-type retaining ring	

DIMENSIONS AND PART NO. OF PRECISION SCREWS
