SPECIFICATIONS

POWER OUTPUT AND TOTAL HARMONIC DISTORTION

225/115 watts per channel minimum continuous average power into 4 ohms, both channels driven from 20 Hz to 20 kHz with no more than 0.04% total harmonic distortion per Car Audio Ad Hoc Committee standards.

Other Specifications

Circuit system	OTL (output transformerless) circuit	High-pass filter	50 - 200 Hz, -12 dB/oct
Inputs	Pulse power supply RCA pin jacks High level input connector	Low-pass filter	50 - 200 Hz, -12 dB/oct
Outputs	Speaker terminals Through out pin jacks	Low boost	0 - 10 dB (40 Hz)
Speaker impedance	1* - 8 Ω (stereo) 2* - 8 Ω (when used as a bridging amplifier)	Power requirements	12 V DC car battery (negative ground)
Maximum outputs (HI-CURRENT/HI-VOLTAGE)	250/500 W x 2 (at 4 Ω) 600/1200 W (monaural) at 4 Ω	Power supply voltage	10.5 - 16 V
Rated outputs (HI-CURRENT/HI-VOLTAGE)	(supply voltage at 14.4 V) 115/225 W x 2 (20 Hz - 20 kHz, 0.04 % THD, at 4 Ω) 150/300 W x 2 (20 Hz - 20 kHz, 0.1 % THD, at 2 Ω) 300/600 W (monaural) (20 Hz - 20 kHz, 0.1 % THD, at 4 Ω)	Current drain	at rated output: 55 A (4Ω HI-VOLTAGE mode) Remote input: 2 mA
Frequency response	5 Hz - 100 kHz (±dB)	Dimensions	Approx. 258 x 50 x 500 mm (10 1/4 x 2 x 19 3/4 in.) (l/h/p) not incl. projecting parts and controls
Harmonic distortion	0.005 % or less (at 1kHz, 4 Ω)	Mass	Approx. 5.4 kg (11 lb. 15 oz.) not incl. accessories
Input level adjustment range	0.2 - 4.0 V (RCA pin jacks) 0.4 - 8.0 V (High level input)	Supplied accessories	Mounting screws (4), Terminal cap (1)

Design and specifications are subject to change without notice.

* HI-CURRENT only

SECTION 1 SERVICING NOTE

CANCELLING THE PROTECTOR DURING SERVICING

Cut JW213 on the amplifier board to cancel the protector.
After servicing always be sure to return JW213 to its original state.

SECTION 2 GENERAL

This section is extracted from instruction manual.

Features

- Maximum power output of 500 watts per channel (at 4 Ω).
- This unit can be used as a bridging amplifier with a maximum output of 1200 watts.
- Direct connection can be made with the speaker output of your car audio if it is not equipped with the line output (High level input connection).
- Built in variable LPF (Low-pass filter), HPF (High-pass filter), and low boost circuit.
- Dual mode connection possible for a multi-speaker system.
- You can switch between HI-CURRENT mode (1 - 2 Ω) and HI-VOLTAGE mode (2 - 4 Ω).
- Protection circuit and indicator provided.
- Pulse power supply* for stable, regulated output power.

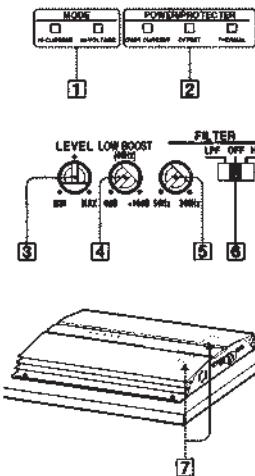

- New circuit which drives the speaker directly and removes the source resistance from the final MOS FET output stage.
- **Pulse power supply**
The unit has a built-in power regulator which converts the power supplied by the DC 12 V car battery into high speed pulses using a semi-conductor switch. These pulses are stepped up by the built-in pulse transformer and separated into both positive and negative power supplies before being converted into direct current again. This is to regulate fluctuating voltage from the car battery. This light weight power supply system provides a highly efficient power supply with a low impedance output.

Caractéristiques

- Puissance de sortie maximale de 500 watts par canal (à 4 Ω).
- Cet appareil peut être utilisé comme amplificateur de pontage avec une sortie maximale de 1200 watts.
- Une connexion directe est possible avec la sortie haut-parleur de votre autoradio si celle-ci n'est pas équipée d'une sortie de ligne (connexion d'entrée haut niveau).
- Filtre passe-bas (LPF), filtre passe-haut (HPF) variabiles et circuit d'amplification des graves.
- Double mode de connexion possible au moyen d'un système à plusieurs haut-parleurs.
- Possibilité de commutation des modes HI-CURRENT (1 - 2 Ω) et HI-VOLTAGE (2 - 4 Ω).
- Avec circuit et indicateur de protection.
- Alimentation électrique par impulsions* pour une puissance de sortie stable, régulée.
- Nouveau circuit supprimant la résistance source du niveau de sortie MOS FET final et entraîne directement le haut-parleur.
- **Alimentation électrique par impulsions**
Cet appareil est équipé d'un régulateur de puissance intégré qui convertit la puissance fournie par une batterie de voiture de 12 V CC en impulsions ultra-rapides au moyen d'un commutateur à semi-conducteur. Ces impulsions sont amplifiées par le transformateur d'impulsions intégré et séparées en alimentation positive et négative avant d'être converties en courant continu. Ce système permet de compenser les fluctuations de tension présentees de la batterie de la voiture. Ce système d'alimentation de table polo assure une alimentation électrique très efficace pour une sortie

Location and Function of Controls

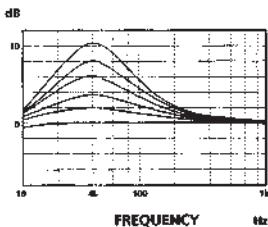

- ① MODE indicator
Indicate HI-CURRENT mode or HI-VOLTAGE mode.
- ② POWER/PROTECTOR indicator
• OVER CURRENT lights up in green during normal operation. The color will change from green to amber when receiving a powerful signal.
• OFF SET lights up green during normal operation. The color will change from green to amber when the voltage out put to the Speaker terminal or the Pin Jack is too high.
• THERMAL lights up in green during normal operation. The color will change from green to amber when the temperature rises to a unsafe level. The color will return to green when the temperature returns to a normal.
- ③ LEVEL adjustment control
The input level can be adjusted with this control when using source equipment made by other manufacturers. Turn it to MAX when the output level of the car audio seems low.
- ④ LOWBOOST level control
Turn the control to boost the frequencies around 40 Hz to a maximum of 10 dB.
- ⑤ Cut-off frequency adjustment control
Sets the cut-off frequency (50 - 200 Hz) for the low-pass or high-pass filters.
- ⑥ FILTER selector switch
When the switch is in the LPF position, the filter is set to low-pass. When in the HPF position, the filter is set to high-pass.
- ⑦ HI-CURRENT/HI-VOLTAGE mode switches (located on the bottom of the unit)
Remove the bottom cover to access the switch.
• In HI-CURRENT mode the speaker impedance is 1 to 2 Ω. This mode sends a signal via parallel circuits for a powerful sound.
• In HI-VOLTAGE mode a speaker impedance 1/2 to 4 Ω. In this mode you can enjoy clear sound with the dynamic range.
Both switches must be set to the same position.

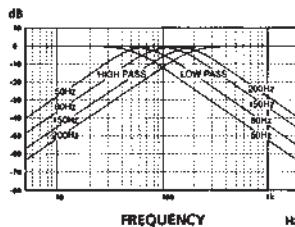

Emplacement et fonction des commandes

- ① Indicateur MODE
L'indicateur signale le mode activé : HI-CURRENT ou HI-VOLTAGE.
- ② Indicateur POWER/PROTECTOR
• OVER CURRENT s'allume en vert en cours de fonctionnement normal. La couleur passe du vert à l'ambre lors de la réception d'un signal puissant.
• OFF SET s'allume en vert en cours de fonctionnement normal. La couleur passe du vert à l'ambre lorsque la tension transmise via la borne Speaker ou la prise Pin est trop élevée.
• THERMAL s'allume en vert en cours de fonctionnement normal. La couleur passe du vert à l'ambre lorsque la température dépasse le niveau de sécurité. La couleur repassera au vert dès que la température est revenue à un niveau normal.
- ③ Commande de réglage LEVEL
Le niveau d'entrée peut se régler avec cette commande lors de l'utilisation d'équipements source d'autres fabricants. Mettez-le sur MAX lorsque le niveau de sortie de l'installation audio paraît faible.
- ④ Commande de niveau LOW BOOST
Tournez cette commande pour amplifier les fréquences autour de 40 Hz à un maximum de 10 dB.
- ⑤ Commande de réglage de la fréquence de coupe
Règle la fréquence de coupe (50-200 Hz) des filtres passe-bas ou passe-haut.
- ⑥ Sélecteur FILTER
Lorsque le commutateur est en position LPF, le filtre est mis sur passe-bas. Lorsqu'il est en position HPF, le filtre est mis sur passe-haut.
- ⑦ Commutateur de mode HI-CURRENT/HI-VOLTAGE (situé sur le dessous de l'appareil)
Déposez le couvercle inférieur pour accéder au commutateur.
• En mode HI-CURRENT, l'impédance de haut-parleur est de 1 à 2 Ω. Ce mode transmet un signal via des circuits parallèles pour créer un son de forte amplitude.
• En mode HI-VOLTAGE, l'impédance de haut-parleur est de 2 à 4 Ω. Ce mode vous permet d'obtenir un son clair dans la plage dynamique. Les commutateurs doivent être réglés sur la même position.

Cut-off frequency/Fréquence de coupure

Circuit Diagram/Schéma du circuit

Connections

Caution

- Before making any connections, disconnect the ground terminal of the car battery to avoid short circuits.
- Be sure to use speakers with an adequate power rating. If you use small capacity speakers, they may be damaged.
- Do not connect the \ominus terminal of the speaker system to the car chassis, and do not connect the \ominus terminal of the right speaker with that of the left speaker.
- Install the input and output cords away from the power supply lead as running them close together can generate some interference noise.
- This unit is a high powered amplifier. Therefore, it may not perform to its full potential if used with the speaker cords supplied with the car.
- If your car is equipped with a computer system for navigation or some other purpose, do not remove the ground wire from the car battery. If you disconnect the wire, the computer memory may be erased. To avoid short circuits when making connections, disconnect the +12 V power supply lead until all the other leads have been connected.

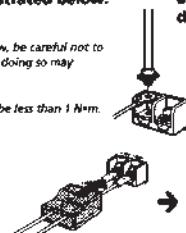

Make the terminal and connector connections as illustrated below.

Note

When you tighten the screw, be careful not to apply too much torque*, as doing so may damage the screw.

* The torque value should be less than 1 N·m.

Pass the leads through the cap, connect the leads, then cover the terminals with the cap.

Etablissez les connexions de la borne et du connecteur comme illustré ci-dessous.

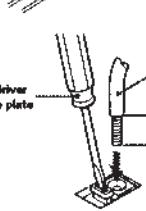

Remarque

Ne serrez pas la vis selon un couple* trop fort car vous pourriez l'endommager.

* La valeur du couple de serrage doit être inférieure à 1 N·m.

Faites passer les fils par le cache, raccordez les fils et recouvrez les bornes avec le cache.

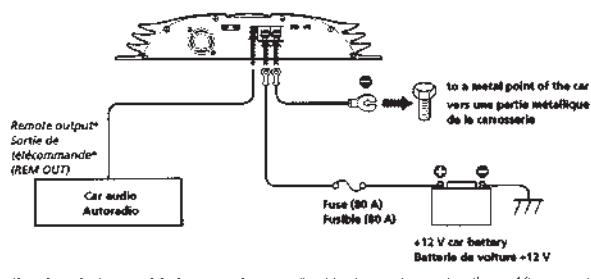

Flat-head screwdriver
Tournevis à lame plate

Cord diameter 0.3 - 1.25 mm (AWG 22 - 16)
Diamètre du cordon : 0,3 - 1,25 mm (AWG 22 - 16)

Unit : mm (in.)
Unité : mm (po.)

Power Connection Leads Câbles d'alimentation

- If you have the factory original or some other car audio without a remote output on the amplifier, connect the remote input terminal (REMOTE) to the accessory power supply.
- If you dispose of the model d'origine ou d'un autre autoradio dont l'amplificateur ne comporte pas de sortie de télécommande, raccordez la borne d'entrée de télécommande (REMOTE) à la prise d'alimentation accessoires.

Notes on the power supply

- Connect the +12 V power supply lead only after all the other leads have been connected.
- Be sure to connect the ground lead of the unit securely to a metal point of the car. A loose connection may cause a malfunction of the amplifier.
- Be sure to connect the remote control lead of the car audio to the remote terminal.
- When using a car audio without a remote output on the amplifier, connect the remote input terminal (REMOTE) to the accessory power supply.
- Use the power supply lead with a fuse attached (80 A).
- Mount the fuse in the power supply lead as close as possible to the car battery.
- Make sure that the leads to be connected to the +12 V and GND terminals of this are larger than 4-Gauge (AWG-4) or a section area of more than 22 mm².
- When using the optional RC-46 power amplifier connecting cord, consult that manual for proper use.

Remarques sur l'alimentation électrique

- Raccordez le câble d'alimentation +12 V uniquement après avoir réalisé toutes les autres connexions.
- Raccordez correctement le fil de masse à une partie métallique de la voiture. Une connexion lâche peut provoquer un dysfonctionnement de l'amplificateur.
- Veuillez à raccorder la fil de télécommande de l'autoradio à la borne de télécommande.
- Si vous utilisez un autoradio dont l'amplificateur ne comporte pas de sortie de télécommande, raccordez la borne d'entrée de la télécommande (REMOTE) à la prise d'alimentation accessoires.
- Utilisez un câble d'alimentation muni d'un fusible (80 A).
- Fixez le fusible du câble d'alimentation le plus près possible de la batterie de voiture.
- Vous devez raccorder des câbles de calibre supérieur à 4 (AWG-4) ou d'une section supérieure à 22 mm² aux bornes +12V et GND.
- Lorsque vous utilisez le cordon de raccordement pour amplificateur RC-46 en option, consultez le manuel pour une utilisation correcte.

Connexions

Attention

- Avant d'effectuer les connexions, débrancher la borne de masse de la batterie de voiture pour éviter tout court-circuit.
- Veuillez à utiliser des haut-parleurs de puissance adéquate. Si vous utilisez des haut-parleurs de faible capacité, ils risquent d'être endommagés.
- Ne raccordez pas la borne \ominus du système de haut-parleur à la carrosserie de la voiture ni la borne \ominus du haut-parleur droit avec celle du haut-parleur gauche.
- Eloignez les câbles d'entrée et de sortie du câble d'alimentation pour éviter les interférences.
- Cet appareil est un amplificateur de faible puissance. Il ne peut donc déployer sa pleine puissance que si les câbles de haut-parleurs de la voiture lui sont raccordés.
- Si votre voiture est équipée d'un système de navigation ou d'un ordinateur de bord, ne retirez pas le fil de terre de la batterie de la voiture, sinon les données mémoire seront effacées. Pour éviter un court-circuit lorsque vous effectuez les branchements, branchez le câble d'alimentation +12 V après avoir branché tous les autres fils.

Etablissez les connexions de la borne et du connecteur comme illustré ci-dessous.

Remarque

Ne serrez pas la vis selon un couple* trop fort car vous pourriez l'endommager.

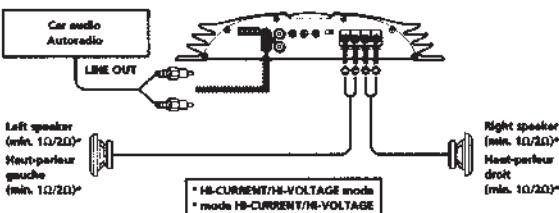

* La valeur du couple de serrage doit être inférieure à 1 N·m.

Faites passer les fils par le cache, raccordez les fils et recouvrez les bornes avec le cache.

Flat-head screwdriver
Tournevis à lame plate

11 (7/64)

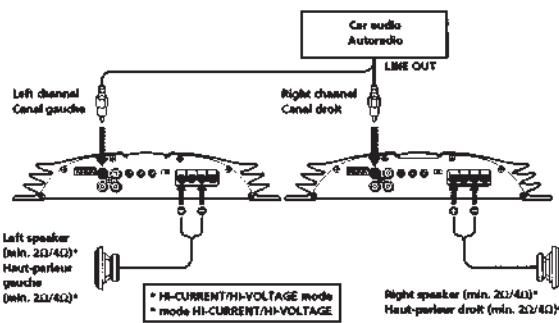

2-Speaker System Système à 2 haut-parleurs

For details on the settings of switches and controls, refer to "Location and Function of Controls."

Pour plus de détails sur les réglages des commutateurs et commandes, reportez-vous à "Emplacement et fonction des commandes".

As a Monaural Amplifier Comme amplificateur monaural

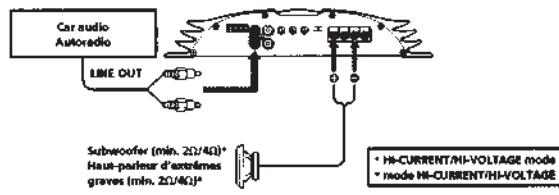

For details on the settings of switches and controls, refer to "Location and Function of Controls."

Pour plus de détails sur les réglages des commutateurs et commandes, reportez-vous à "Emplacement et fonction des commandes".

Remarque
Vérifiez que la sortie de ligne de l'autoradio est raccordée à la prise portant l'indication "L (MONO)" sur l'appareil.

As the Monaural Amplifier for a Subwoofer Comme amplificateur monaural pour un haut-parleur d'extrêmes graves

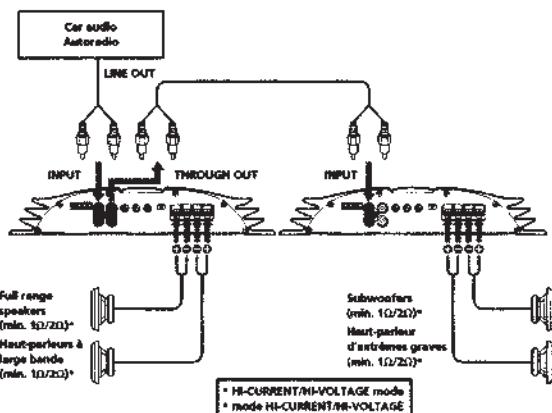

For details on the settings of switches and controls, refer to "Location and Function of Controls."

Pour plus de détails sur les réglages des commutateurs et commandes, reportez-vous à "Emplacement et fonction des commandes".

Remarque
Si vous désirez utiliser un haut-parleur d'extrêmes graves comme haut-parleur monaural, raccordez le haut-parleur comme illustré ci-dessus. Les signaux de sortie vers le haut-parleur d'extrêmes graves seront une combinaison des signaux de sortie droit et gauche.

2-way System Système à 2 voies

Two output channels
Deux canaux de sortie

Use the THROUGH OUT terminal when you install all more amplifiers. The signals are output as they were input. (LOW BOOST, HPF, LPF do not work.)

Notes

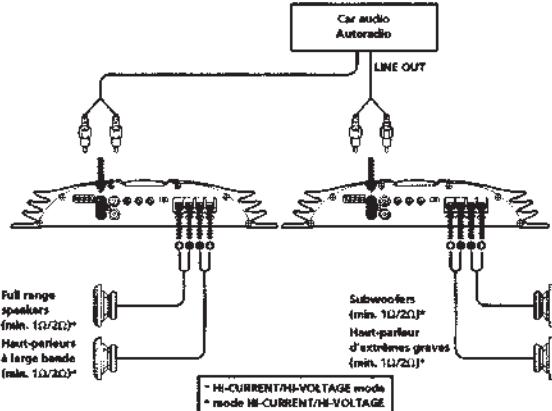

- A maximum 3 amplifiers can be connected to the THROUGH OUT terminal. If you connect more than three amplifiers, it may cause problems such as sound dropout.
- A high level input connection cannot use THROUGH OUT.
- With a connection d'entrée de haut niveau, vous ne pouvez pas utiliser THROUGH OUT.

Utilisez la borne THROUGH OUT lorsque vous installez plusieurs amplificateurs. Les signaux sont sortis comme ils sont entré. (LOW BOOST, HPF, LPF ne fonctionnent pas.)

Remarques

- Vous pouvez raccorder un maximum de 3 amplificateurs à la borne THROUGH OUT. Si vous raccordez plus de trois amplificateurs, cela peut provoquer des problèmes comme des baisses du son.
- With une connexion d'entrée de haut niveau, vous ne pouvez pas utiliser THROUGH OUT.

Four output channels Quatre canaux de sortie

For details on the settings of switches and controls, refer to "Location and Function of Controls".

Notes

- In this system, the volume of the subwoofers will be controlled by the car audio fader control.

Pour plus de détails sur les réglages des commutateurs et commandes, reportez-vous à "Emplacement et fonction des commandes".

Remarque

Dans ce système, le volume des haut-parleurs d'extrêmes graves est contrôlé par la commande de balance avant/arrière de l'autoradio.

Dual Mode System (With a Bridged Subwoofer) Double mode de connexion (avec un haut-parleur d'extrêmes graves en pont)

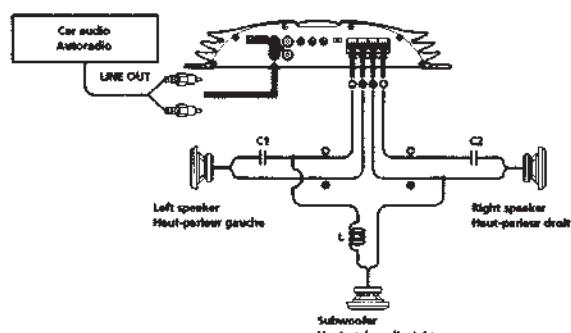

Table of crossover values for 6 dB/octave (4 ohms)

Crossover Frequency unit: Hz	L (coil)* unit: mH	C1/C2 (capacitor)* unit: μ F
50	12.7	800

500	0.8	50
800	0.6	39
1000	0.6	39

(* non fourni)

Notes

When using passive crossover networks in a multi-speaker system, care must be taken as the speaker system's impedance should not be lower than that of the suitable impedance for this unit.

When you are installing a 12 decibels/octave system in your car, the following points must be considered. In a 12 decibels/octave system where both a choke and capacitor are used in series to form a circuit, great care must be taken when they are connected. In such a circuit, there will be an increase in the current which bypasses the speaker with frequencies at around the crossover frequency. If audio signals are continued to be fed into the crossover frequency area, it may cause the amplifier to become abnormally hot or the coil will be blown. Also if the speaker is disconnected, a series-resonant circuit will be formed by the choke and the capacitor. In this case, the impedance in the resonance area will decrease dramatically resulting in a short-circuit-like situation causing damage to the amplifier. Therefore, make sure that a speaker is connected to such a circuit at all times.

Remarques

Lorsque vous utilisez des circuits de recouplement de fréquence passifs dans un système à plusieurs haut-parleurs, assurez-vous que l'impédance du système n'est pas inférieure à celle prévue pour cet appareil.

Lorsque vous installez un système à 12 décibels/octave dans votre voiture, vous devez respecter les points suivants. Dans un système à 12 décibels/octave où la bobine d'arrêt et le condensateur sont utilisés en série pour former un circuit, vous devez réaliser les branchements avec beaucoup de précaution. Dans ce type de circuit, une augmentation du courant contournant le haut-parleur se produit dans les fréquences se situant autour de la fréquence de coupure. Si des signaux audio continuent d'être fournis dans la zone de la fréquence de recouplement, une surchauffe risque de se produire dans l'amplificateur et le risque de sauter. Si le haut-parleur n'est pas raccordé, un circuit de résonance sera créé par la bobine et le condensateur. Dans ce cas, l'impédance dans la zone de résonance sera considérablement réduite, et comme dans le cas d'un court-circuit, l'amplificateur peut être endommagé. Par conséquent, veillez à ce qu'un haut-parleur soit toujours raccordé au circuit.

High Level Input Connection

(As a Monoaural Amplifier for a Subwoofer)

SECTION 3

ELECTRICAL ADJUSTMENTS

SELF-DIAGNOSIS FUNCTION

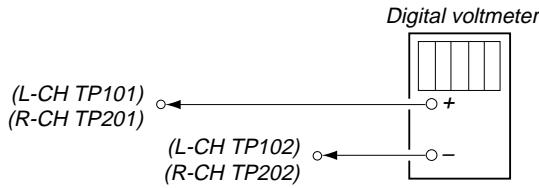

In addition, this unit comes with a function which alerts when settings of the Hi-Current and Hi-Voltage modes are wrong. There are two switches at the base of this unit to switch to the Hi-Current and Hi-Voltage modes respectively. When these two switches are not set to the same modes, the Hi-Current and Hi-Voltage indicators on the top panel change from green to amber to indicate an error.
"See INSTRUCTION MANUAL for more information."

IDLING ADJUSTMENT

• L-CH (R-CH) Adjusting Method

Connection:

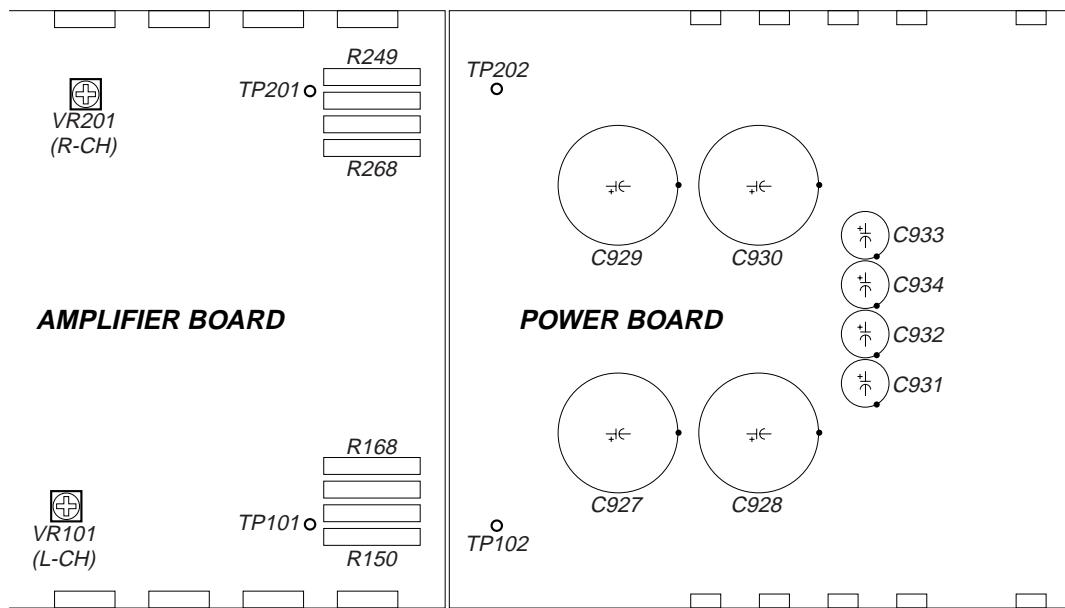

Procedure:

1. Rotate the semi-fixed resistor VR101 (R-CH is VR201) completely in the counterclockwise direction as seen from the component side.
 - The large variable range of the semi-fixed resistor prevents flow of excessive current to the output MOS-FET.
 - Take note than when an excessive current flows, the protectors operate (both the amber and green lamps light up at the same time) and the amplifier will stop operating.

Adjustment Location:

- AMP/POWER Board - (Component side)

2. Set the input signal setting to non-signal.

3. Apply a 14.4V power supply voltage between the +12V and REMOTE terminals and GND terminal.

4. Adjustments

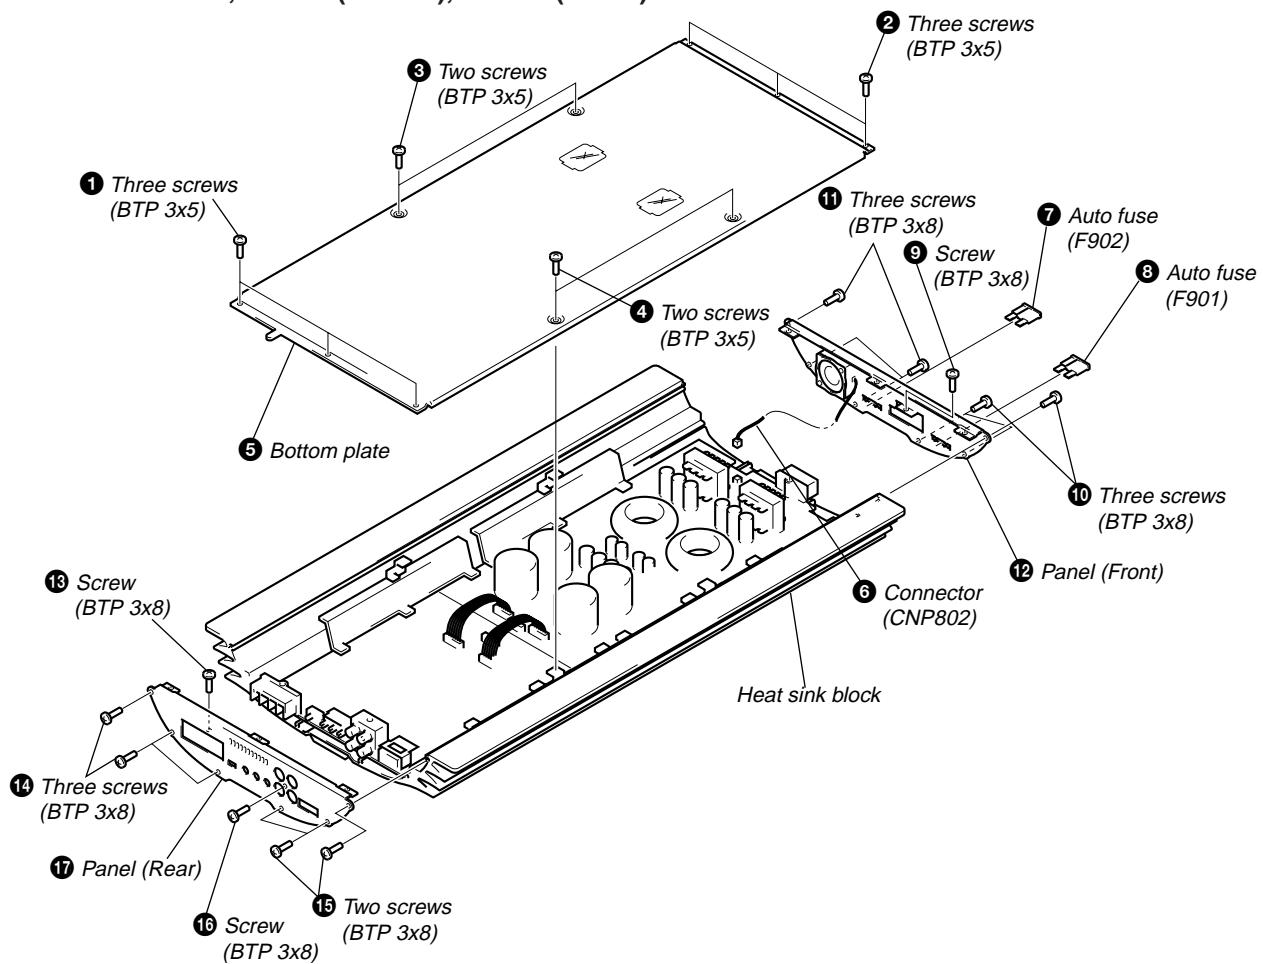

Connect a digital voltmeter between the two terminals of the cement resistors R149 and R150 (0.03 Ω) indicated as TP101 and TP102 (TP201 and TP202 for R-CH). Rotate the semi-fixed resistor VR101 and adjust so that the voltage between TP101 and TP102 comes between 0.5 mV and 1.1 mV with 0.8 mV as the center. Adjust R-CH in the same way.

- Perform adjustments carefully as voltage changes are minute.
- When adjusting from the component side, rotating the semi-fixed resistor control in the clockwise direction increases the idling current while rotating in the counterclockwise direction decreases the idling current.

SECTION 4 DISASSEMBLY

Note : Follow the disassembly procedure in the numerical order given.

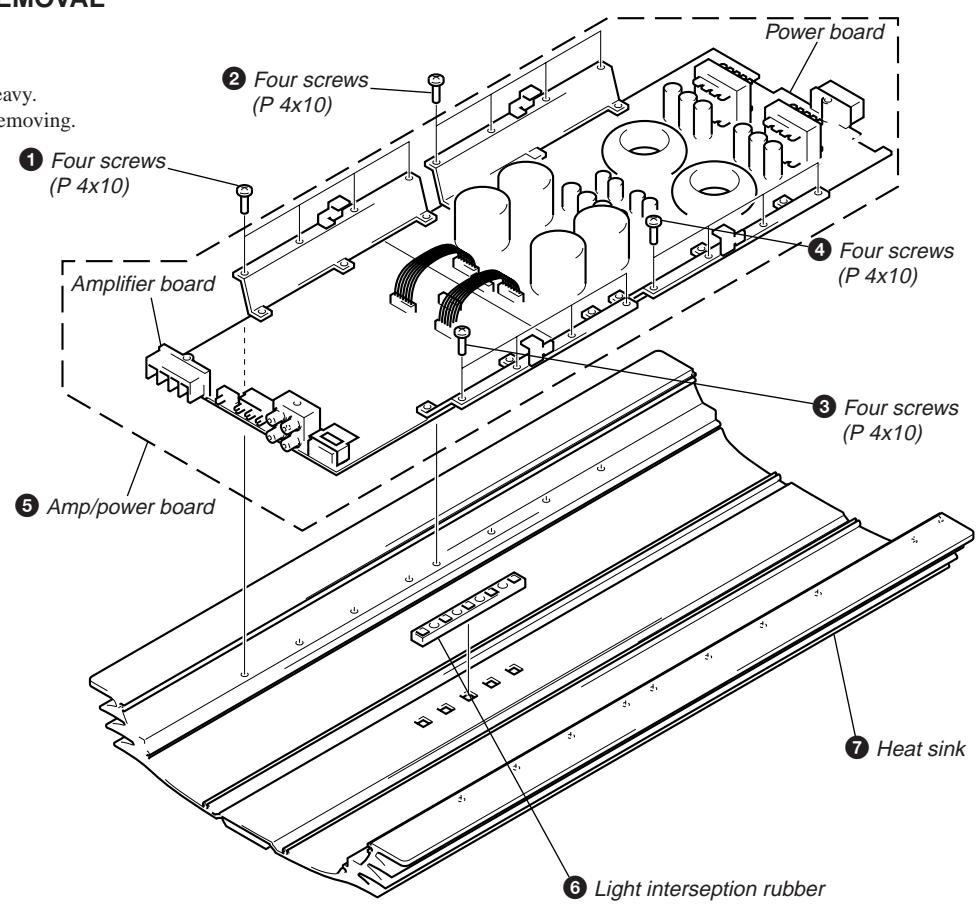

4-1. BOTTOM PLATE, PANEL (FRONT), PANEL (REAR) REMOVAL

4-2. AMP/POWER BOARD REMOVAL

Note :

Amplifier board and Power board are not separated because the board is long and heavy.
Take care not to damage the board when removing.

SECTION 5 DIAGRAMS

THIS NOTE IS COMMON FOR PRINTED WIRING BOARDS AND SCHEMATIC DIAGRAMS.
(In addition to this, the necessary note is printed in each block.)

For schematic diagrams.

Note:

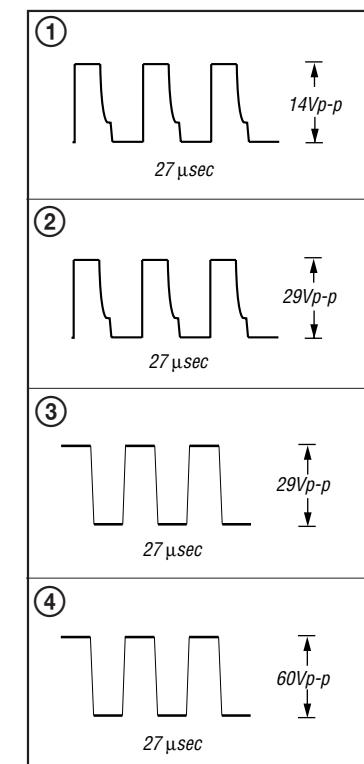

- All capacitors are in μF unless otherwise noted. pF : $\mu\mu\text{F}$ 50 WV or less are not indicated except for electrolytics and tantalums.
- All resistors are in Ω and $1/4$ W or less unless otherwise specified.
- \triangle : internal component.
- \square : panel designation.
- $B+$: B+ Line.
- Power voltage is dc 14.4V and fed with regulated dc power supply from ACC and BATT cords.
- Voltage and waveforms are dc with respect to ground under no-signal conditions.
- no mark : POWER ON
 $*$: Impossible to measure
- Voltages are taken with a VOM (Input impedance $10 \text{ M}\Omega$). Voltage variations may be noted due to normal production tolerances.
- Waveforms are taken with a oscilloscope. Voltage variations may be noted due to normal production tolerances.
- Circled numbers refer to waveforms.
- Signal path.
- \Rightarrow : AUDIO

For printed wiring boards.

Note:

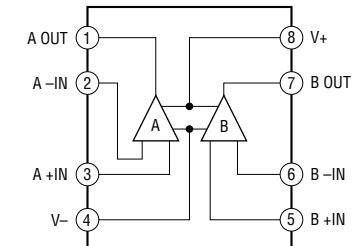

- \circ : parts extracted from the component side.
- \triangle : internal component.

5-5. SCHEMATIC DIAGRAM – POWER SECTION –
 • See page 10 for IC Block Diagrams.

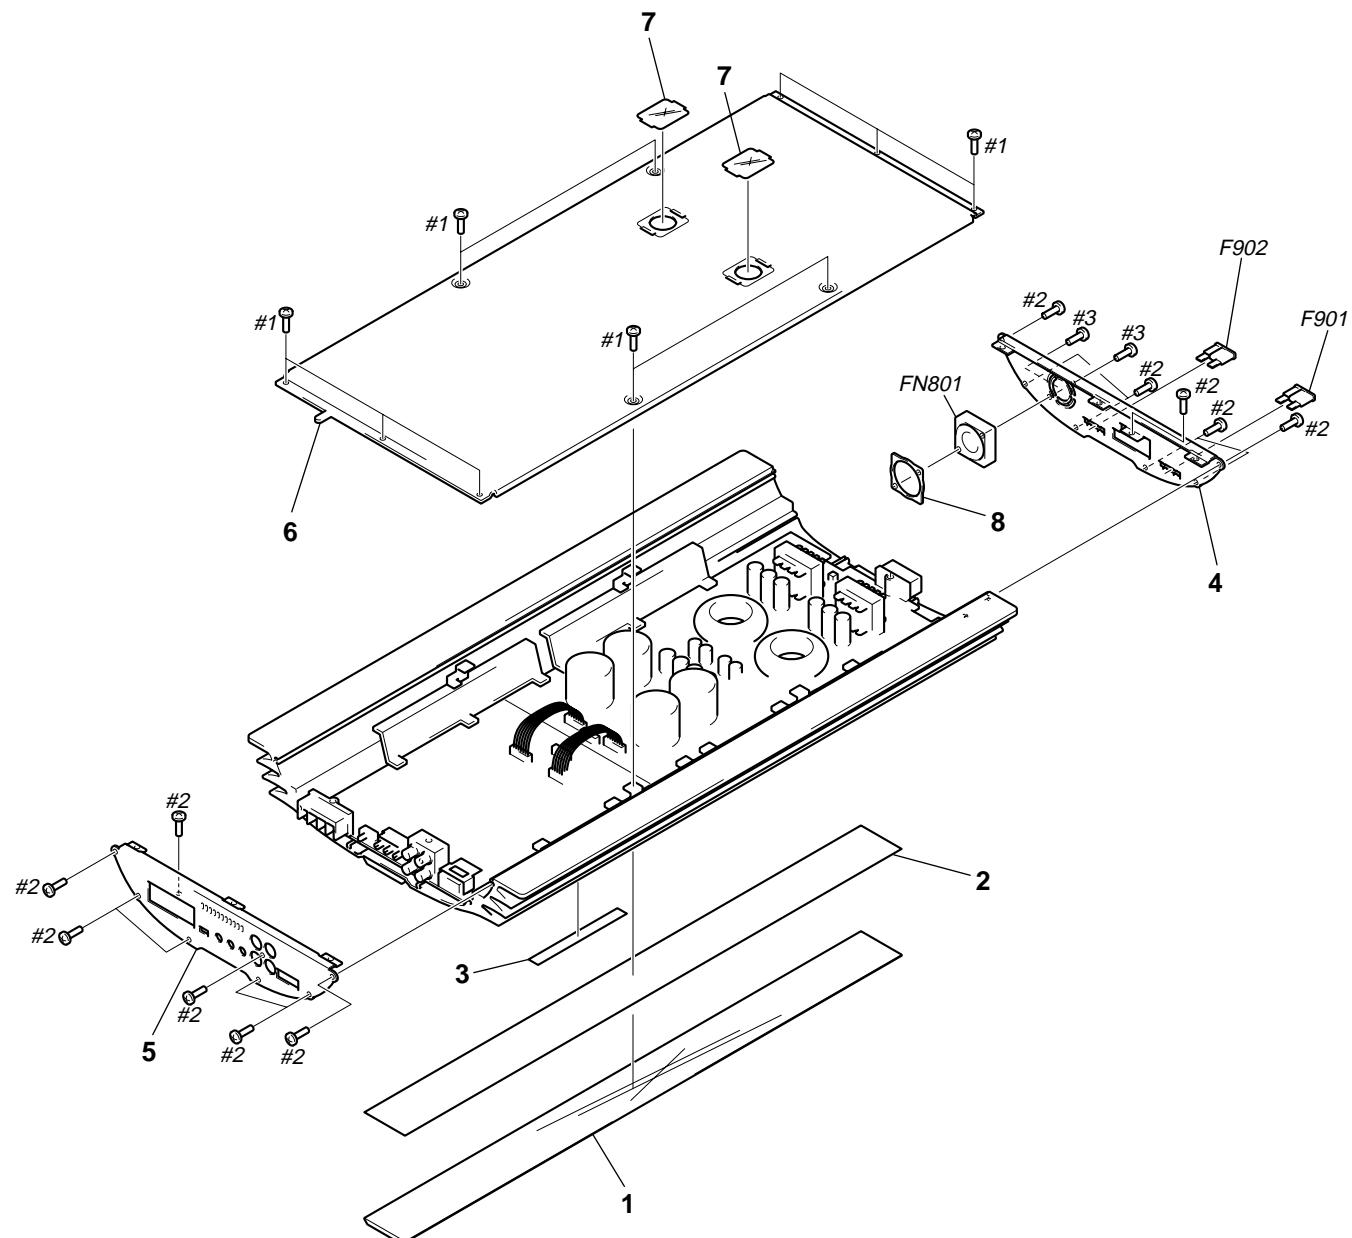

SECTION 6 EXPLODED VIEWS

NOTE:

- Items marked “*” are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- The mechanical parts with no reference number in the exploded views are not supplied.

(1) BOTTOM PLATE AND PANEL (FRONT/REAR) SECTION

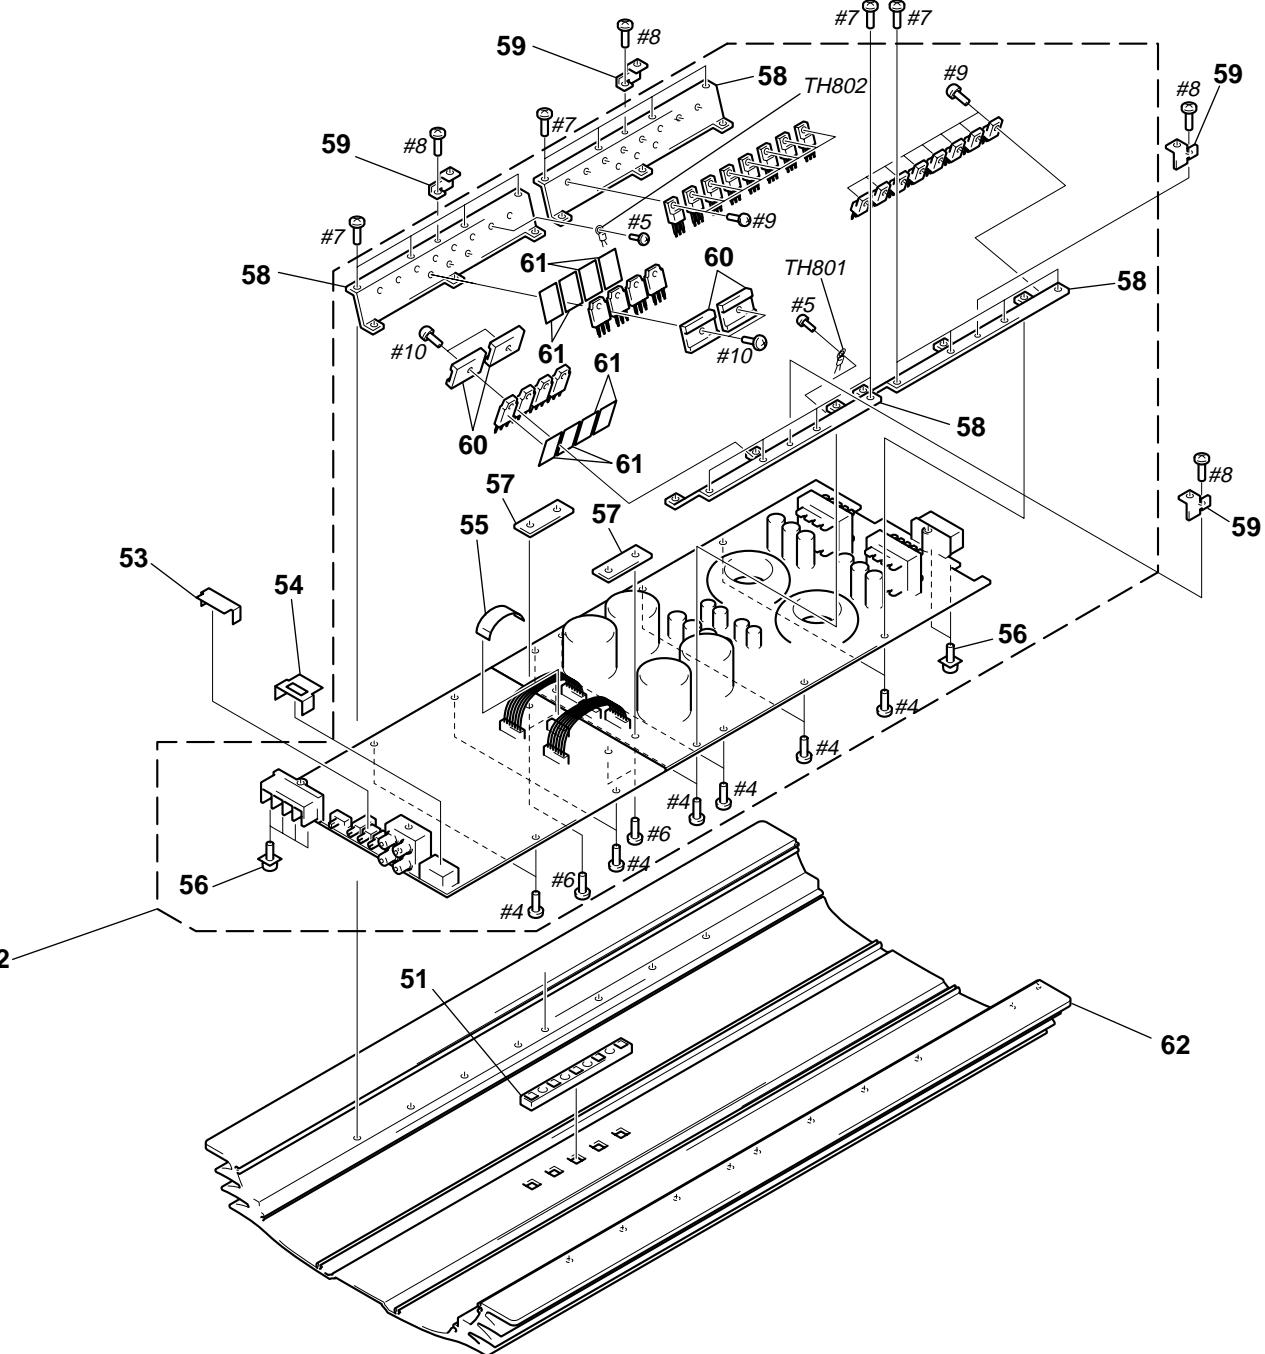

- Hardware (# mark) list and accessories and packing materials are given in the last of this parts list.

(2) AMP/POWER BOARD SECTION

NOTE:

- F901, F902 AND FN801 are including into the AMP/Power board.

SECTION 7

ELECTRICAL PARTS LIST

AMPLIFIER

Note:

When indicating parts by reference number, please include the board name.

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- -XX, -X mean standardized parts, so they may have some difference from the original one.

- Items marked “**” are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

- RESISTORS

All resistors are in ohms

METAL: Metal-film resistor

METAL OXIDE: Metal Oxide-film resistor

F : nonflammable

- SEMICONDUCTORS

In each case, u: μ , for example:

uA...: μ A..., uPA...: μ PA..., uPB...: μ PB...,

uPC...: μ PC..., uPD...: μ PD...

- CAPACITORS

μ F : μ F

- COILS

μ H : μ H
