SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

1. Check the area of your repair for unsoldered or poorly-soldered connections. Check the entire board surface for solder splashes and bridges.
2. Check the interboard wiring to ensure that no wires are "pinched" or contact high-wattage resistors.
3. Look for unauthorized replacement parts, particularly transistors, that were installed during a previous repair. Point them out to the customer and recommend their replacement.
4. Look for parts which, though functioning, show obvious signs of deterioration. Point them out to the customer and recommend their replacement.
5. Check the B+ voltage to see it is at the values specified.

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY SHADING AND MARK ⚠ ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

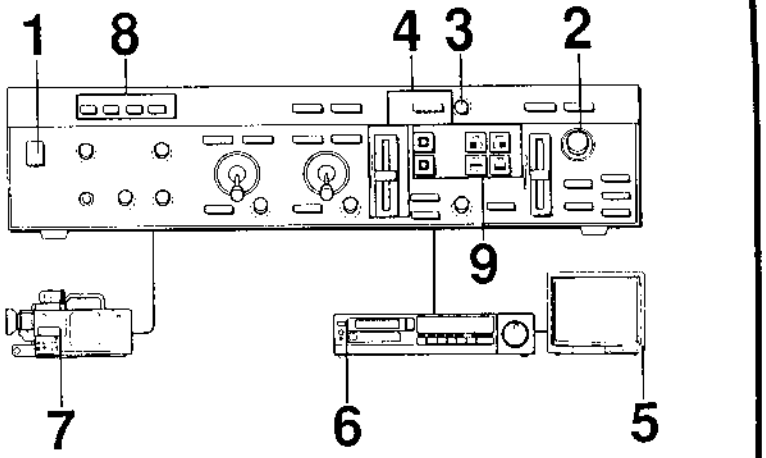
1-2. MONITOR ADJUSTMENT AND PREPARATION

Before beginning color correction using XV-C900, adjust your monitor so that colors appearing on the monitor screen will not be deceptive.



1 Turn on the color corrector.

2 Set the COLOR SELECT knob to COLOR BAR

3 Turn the VIDEO ART control fully to MAX.

4 Press one of the WIPE PATTER buttons and move the WIPE lever to its uppermost position.

5 Turn on the TV/monitor and select the appropriate input so that the color bar appears on the screen.

6 Turn on the recording VCR. If desired, record the color bar at the beginning of a tape for monitor color adjustment during future playback.

7 Turn on the playback VCR.

8 Press the appropriate INPUT SELECT button.

9 Press the activated WIPE PATTERN button (with the lamp lit) to turn it off. The color bar disappears

Adjusting brightness
- Turn the monitor's color control to the minimum so that the color bar appears in black and white.
- Turn the monitor's brightness control until the eight bars are clearly distinguished.

Adjusting color intensity
Adjust the monitor's color until all eight colors appear normal. (Refer to the color bar photograph [G] on the reference sheet.)

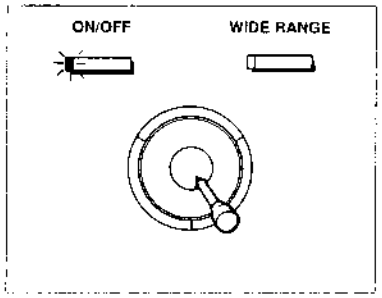
Caution
When recording the color bar or using it to adjust the color on the monitor, make sure that the power of the playback VCR is turned off. Signals being input from the SOURCE IN jacks may distort the color bar.

1-3. COLOR ADJUSTMENT AND CORRECTION DURING EDITING

Insert a prerecorded tape into the playback VCR, begin playback and adjust color using the functions listed below. Refer to the photographs provided on the attached color reference sheet.

White/Black Balance

To make "supposed-to-be white" objects look properly white [A]
Press the WHITE BALANCE ON/OFF switch and move the lever.



This allows color correction of the video image's bright portions.

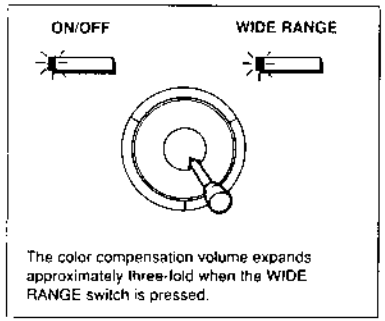
To make "supposed-to-be black" objects look properly black [B]
Press the BLACK BALANCE ON/OFF switch and move the lever.
This allows color correction of the video image's dark portions.

You can even create special color effects with this function. [C]
A color screen can be changed gradually to monochrome or a monochrome screen gradually to color. Setting the COLOR control to the leftmost position (minimum) may provide better results.

Note
The desired color may not be generated if a video source without burst signals is input (from a monochrome video camera, etc.)

Wide Range

For a greater range of corrections
Press the WIDE RANGE switch(es) and move the WHITE (BLACK) BALANCE lever(s).



The color compensation volume expands approximately three-fold when the WIDE RANGE switch is pressed.

Note
Certain TV sets have a muting function which may cause the screen to go blank when noise-ridden pictures, such as high-speed picture search images, are processed by this unit.

White/Black Clip

Compensating color with bright (dark) segments of the image
When the video image is adjusted referring to a color other than white or black, white and black objects may not appear natural. Even in that case, the WHITE (BLACK) CLIP function allows you to compensate color with the white (black) segments of an excessively bright (dark) screen.

Press the WHITE (BLACK) CLIP switch. Adjust the white (black) balance compensation level using the control. Turn the control fully to the right to maximize the compensation level. When it is set to the leftmost position (minimum), the level is the same as when the WHITE (BLACK) CLIP switch is turned off. Both the switch and control do not function when the WHITE (BLACK) BALANCE ON/OFF switch is turned off.

Note
In normal circumstances, use the unit with this switch turned off.

Color Control

Adjusting color intensity [D]
- Turn the control clockwise to obtain a deeper color.
- Turn the control counterclockwise to obtain a lighter color.
- In normal circumstances, set this control to the center click position.

Gamma Control

Correcting pictures that are either too bright or dark [E]
- To brighten a dark subject on a bright background, turn the GAMMA control towards HIGH.
- To make a bright subject on a dark background easier to see, turn the control towards LOW.
- In normal circumstances, set the control at the center click position.

Phase Correct

Correcting false outlines after repeated editing
- Turn the control towards [+] makes the overall contrast sharper.
- Turn the control towards [–] allows you to eliminate false outlines around the edges of the picture.
- In normal circumstances, set the control at the center click position.

Chroma NR (noise reduction)

Reducing color flickers [F]
- Turn the CHROMA NR switch on to reduce color flickering caused by repeated editing.
- This function does not affect normal images.
