MODELS 1-621, 1-622, 9-62, 910

Follow the procedure outlined below in order to adjust the push buttons properly:

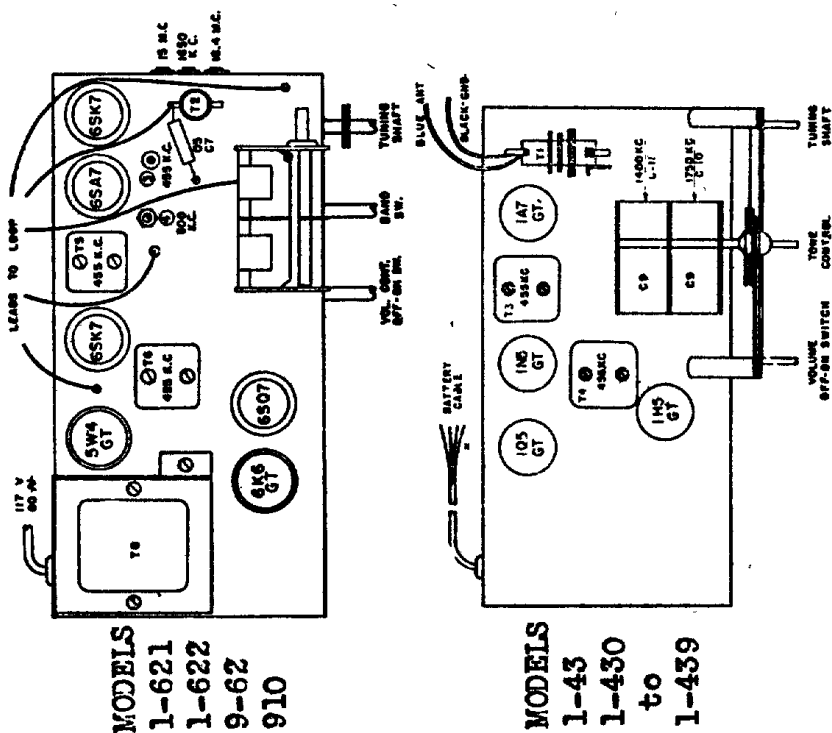

1. By means of the tuning knob, tune in as accurately as possible your first desired station.
2. Lift up the button for that station and with a small screw-driver loosen set screw about two turns (counter-clockwise).
3. Push the set screw in as far as it can go with the screw-driver, and while holding the set screw in this position, make sure that your desired station is tuned in properly. It may be necessary to re-tune your station.
4. While holding set screw in as far as possible, and after your station is adjusted properly, tighten set screw firmly.

The push-button tuning system is now correctly set up for your first selected station.

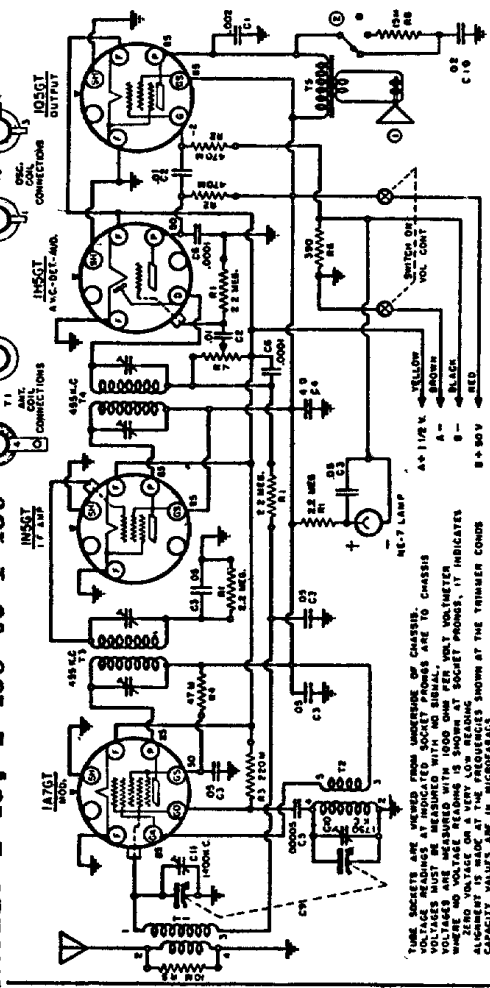

Follow through with this same procedure in setting up the other three stations.
