

## REGENTONE - DW1, DP2

Valve	Anode		Screen		Cath.
	V	mA	V	mA	V
V1 UCH81 ...	{ 168 Oscillator 85	{ 2.0 4.5	70	5.6	—
V2 UBF80 ...	168	4.2	62	1.65	—
V3 UCL83 { a	100	0.6	—	—	—
b	210	27.5	168	4.9	9.5
V4 UY85 ...	204*	—	—	—	220.0

\* A.C. reading.

**Switches.**—S1-S4 are the band switches ganged in a single rotary unit on the chassis deck. This unit is indicated at A2 in the rear illustration of the chassis where the switch tags are identified. With the band switch control set anti-clockwise for L.W. operation, switches S2 and S4 close. For M.W. operation switches S1, S3 close.

### CIRCUIT ALIGNMENT

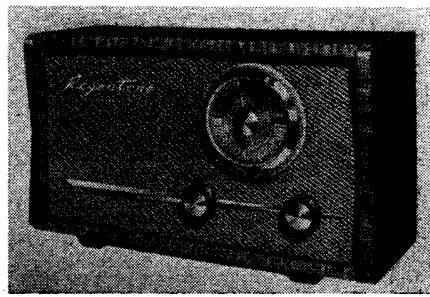

- 1.—Switch receiver to M.W. and turn gang to maximum. Connect output of signal generator, via an 0.1  $\mu\text{F}$  isolating capacitor in each lead, between chassis and control grid (pin 2) of V2.
- 2.—Feed in a 470 kc/s signal and adjust the cores of L8 (B2) and L7 (E4)

RESISTORS			
	Values	Locations	
R1	V1 C.G. ...	680k $\Omega$	F4
R2	V1 S.G. feed ...	18k $\Omega$	F4

for maximum output. Transfer signal generator live lead to point X (A1). Feeding in a 470 kc/s signal, adjust the cores of L4 (A1) and L3 (F4) for maximum output. Do not re-adjust the cores of L7, L8.

3.—Connect a 1 pF capacitor as dummy aerial between the signal generator live lead and point X. Check that with gang at maximum capacitance, the cursor coincides with the high wavelength ends of the tuning scales.

4.—Tune receiver to the 521.7 m calibration mark on the inner edge of the tuning scale, feed in a 575 kc/s signal and adjust the core of L5 (A1) for maxi-

mum output, choosing the second peak in from the adjusting end.

5.—At the same frequency, adjust the inductance of L1 (A1) for maximum output by sliding the coil along its ferrite rod.

6.—Tune receiver to 200 m calibration mark on scale, feed in a 1,500 kc/s signal and adjust C12 (F3) and C2 (F3) for maximum output.

7.—Repeat the adjustments in operations 4, 5 and 6.

8.—Switch the receiver to L.W. and tune it to the 1,333 m calibration mark on the outer edge of the tuning scale. Feed in a 225 kc/s signal and adjust C13 (F3) for maximum output. Adjust the inductance of L2 (B1) for maximum output at this frequency by sliding the coil along its ferrite rod.
