

The schematic diagram illustrates a radio receiver circuit. It begins with a power supply section at the top, featuring a 60W transformer, a 0.4A fuse, and a 50nF capacitor. The main circuit includes a 550Ω resistor, a 100Ω resistor, and a 100Ω resistor. The output stage consists of a 220V/240V transformer, a 200Ω resistor, and a 220V/240V transformer. The circuit is powered by a 18V/0.1A battery.
